Gregorian Calendar, revision of Julian Calendar (*q.v.*) introd. by Pope Gregory XIII in 1582; necessitated by accumulated discrepancy betw. calendar and tropical year due to mean Julian year being 11 min. 12 sec. too long, so that by 1582 the year was retarded by 10 days. This was remedied by reckoning the day after Oct. 4th in that year as Oct. 15th, and providing that leap year

(*q.v.*), instead of occurring every fourth year, should be omitted in those years that were divisible by 100 but not by 400; thus the year 1600 was a leap year, but 1700, 1800, 1900 were not. This calendar, now in almost universal use, was adopted by various countries at following dates: 1582, part of Italy, Spain, Portugal, France, Netherlands, Lorraine; 1584, Catholic Germany, Switzerland; 1586, Poland; 1587, Hungary; 1700, Protestant Germany, Denmark; 1700-40, Sweden; 1752, England; 1872, Japan; 1912, China; 1915, Bulgaria; 1917, Turkey, Russia; 1919, Yugoslavia, Rumania; 1923, Greece.

GYMNASTIC EXERCISES

Breathing exercises while seated tailor-fashion

Return from position of outstretched arms

Stretching upwards

Walking on the toes

Exercises for ankles and deportment

Stretching back muscles

Abdominal exercise

Hardening leg muscles

Exercise for stomach muscles

Start of swing back

Leg-stretching while seated

Daily gymnastic exercises, lasting 8-10 minutes each morning, will suffice to give the muscles and nervous system the energy to withstand the strain of the coming day.

Correct breathing is the basis of all body-training; systematic and regular breathing-exercises empty the lungs of used-up air and inculcate habits of deep-breathing, thus ensuring calmness and concentration of mind for the day.

The full powers of the body must be awakened by rendering it supple, so that the blood and other juices may circulate freely. Morning exercises must include stretching, shaking, and slapping; the suppleness and vitality thus acquired increase powers of endurance and enable the body to bear prolonged standing, sitting, stooping, or walking during working hours.

Other exercises are necessary for strengthening of abdominal organs and stomach muscles and to give the body the correct deportment in standing and walking, by means of arm, leg, and foot movements.

The *apex* of the heart, in the region of the 5th intercostal space and the left nipple, beats against the chest-wall at every pulsation (*apex beat*). At every contraction (*systole*) and dilatation (*diastole*) of the H., *heart sounds* occur which are audible when the ear is placed against the heart, but are clearer when listened to through a stethoscope; in valvular incompetence *cardiac murmurs* are heard in addition to or replacing heart sounds. In cases of obesity, *fatty degeneration* is likely to occur, layers of fat forming below pericardium and fat replacing the muscular tissue. **H.burn**, burning sensation in oesophagus, caused by excessive formation of acid in stomach.

Heartsease, common wild pansy (q.v.), a preparation from which was believed to cure the pangs of love.

Heat, name given to two forms of energy, 1) radiant h., electro-magnetic radiation of wave-length just greater than that of visible red light (q.v.); upper limit of wave-length indefinite, but fraction of millimetre. 2) Sensible heat, the vibratory or irregular motion of the atoms and molecules of bodies. The *absolute temperature* of a body is proportionate to the mean kinetic energy of motion of particles; total heat energy contained in body is greater than sum of kinetic energy, energy being stored in separating particles against cohesive force. See **SPECIFIC H.** Heat flows by *conduction* from body at higher

to one at lower temp. when in contact; all bodies emit radiant heat, hence temp. of bodies in heat-insulated enclosure becomes same whether bodies in contact or not. **H.** causes change of state from solid to liquid (fusion), and liquid to gas (evaporation). *See* INSULATION; LATENT HEAT; KINETIC THEORY OF GASES; THERMO-DYNAMICS; CALORIMETER.

Sankey Diagram

H. accumulator: *see* STEAM ACCUMULATOR, RUTH'S. **H. of fusion,** of a body is the quantity of heat reqd. to convert 1 gramme from solid to liquid state. Heating is effected electrically by passing current thr. resistance, gen. nichrome or similar wire. Elec. radiators have red-hot heating elements and reflectors to direct radiation. **H. economy,** or *efficiency*, proportion of **H.** utilized to total **H.** generated, e.g., in boiler installation, as, for example, on Sankey Diagram of heat valence. **H. engines,** machines by wh. **H.** is transformed into mechan. power; *see* STEAM ENGINES; INTERNAL COMBUSTION E.; HOT-AIR E. **H., equivalents of,** a) *mechanical*; number of mech. units of energy (*see* ERG) corresp. to one unit of **H.** (*see* CALORIE); $4.189.10^7$ ergs = 1 calorie. b) *Electrical*; number of calories corresp. to one elec. unit of energy (*see* JOULE; WATT); 0.239 cal. = 1 Joule. **H. exchange apparatus** effects the flow of heat from one fluid to another on the counter-current principle. The two fluids pass in opp. directions on either side of a thin wall, through which heat passes. *See also* REGENERATOR; ECONOMIZER; and (for efficiency of **H.**) HOT-WATER SUPPLY.

Heath, heather, name given to shrubby plants inhabiting moors and sandy places. Common heather, bell heather, is *Erica cinerea*, with purple bell-shaped flowers. Cross-leaved heath (*E. tetralix*) has large rose-coloured flowers. Ling, also known as heather, is *Calluna vulgaris*; flowers purple or occas. white (supposed to be lucky). Tree heath (white blossom) is *E. arborea*, found on Medit. coast; from its roots "briar" ^{Heath} pipes are made (Fr., *bruyère*). **H.-cock,**

forest bird; species of black-grouse; breeds on the ground (March to May).

Heavens, (astron.) that part of the celestial sphere visible from a given pt. upon earth's surface; divided for observational purposes into 4 equal quarters or segments, N., S., E., and W.

Herald

Heraldry, science of armorial bearings, their history, use, and description (*blazonry*). Derived from early use of distinguishing devices, for wh. the shield furnished an obvious ground. Use of coats of arms became systematised and heredit. c. 12th cent.; till c. 14th cent. their assumption was unregulated, but exclusive right to a coat became established by usage. Branches of a family often bore similar coat with differing charge or colour, e.g., an added border; special marks of *cadency*, for younger sons, being later introduced. Rules of blazonry orig. simple; the elaborations of 16th cent. and later writers without warrant. The English heraldic tinctures are: 1) metals: *or* (gold), *argent* (silver); 2) colours: *gules* (red), *azure* (blue), *sable* (black), *vert* (green), *purpure* (purple). Metal is never placed on metal, nor colour on colour. There were also two furs (later more), *ermine* and *vair*. A charge in its natural colours is called *proper*. The field may be divided by horizontal, vertical, or other lines, from wh. developed the charges called *ordinaries*, i.e., *pale*, *fesse*, *cross*, *bend*, *saltire*, *chevron*, *chief*; while the lines may be straight, wavy, indented, engrailed, etc. Other charges include beasts (natural or fabulous), birds, fishes, flowers, etc. (usually conventionalised), and such conventional forms as roundels, lozenges, crescents, etc.; the charge may be a pun on bearer's name, e.g., the cocks of Cockfield, the swallows (*hirondelles*) of Arundel. A husband may bear his wife's arms side by side (*impaled*) with his own; and be she an heiress, the issue may quarter

them. Accumulated quarterings are not usu. displayed in England. *Augmentations* are charges granted for special service, often placed on an *escutcheon of pretence*. Outside the shield, forming with it the achievement, are the *crest*, orig. borne on the helmet and displayed; *mantling* (lambrequin), descending from the helmet and usu. showing the principal colour of the coat; *supporters*, now commonly used only by peers; and *motto*, a word or sentence (sometimes punning) not forming an essential part of the bearing. The *badge* used by certain families, orig. the distinguishing mark of retainers, is distinct from the crest.

Heredity, transmission by living organisms of their characteristics to their offspring. Transmission is by *H. factors*, which are contained like beads on a string in the chromosomes (*q.v.*) of the germ-cell nucleus. Mendel's Laws (*q.v.*) state how combinations of factors appear in offspring. In mixed races, germ-cells are mixed in character of factors, hence offspring of same parents differ according to the accident of the particular factors which they receive. Acquired characteristics are never transmitted by heredity, germ-cells not being affected by the bodily fate of the individual. Heredity factors may change with production of new characteristics; this is known as *mutation*, and may be produced artificially, *e.g.*, by X-rays. Study of human heredity of great importance in Eugenics, race hygiene, disease, etc. See ATAVISM; LAMARCKISM; MENDEL'S LAWS.

Balaton; marshland is being drained by canals; treeless plains (the Pussta, much of wh. is now arable) provide pasture for horses, cattle, and sheep; forestry; river fisheries. Coal, iron, salt; flour-milling; sugar refining; manuf. agric. implements; textiles. Rlys., 5,400 m.; chf. waterway, Riv. Danube. Chf. tns., *Buda-pest* (cap.), Szeged, Debrecen, Kccskemet, and Pesterzebet. CONSTITUTION: Monarchy; vice-regent until question of succession has been settled. *Reichstag* consisting of *Upper House* (permanent; 250 members), and *Chamber of Deputies* (245 members). National debt 1928: $1\frac{1}{2}$ milliard pengo. In 5th cent. ruled by Huns, then by Avars; since 900 Magyar-Hungarian. Invasions in W. Eur. repulsed by Otto I, 955; 1001, converted to Christianity under Kg. Stephen the Saint; 1077-1301, Arpad dyn.; 1308-82, house of Anjou (Louis the Great); zenith of power, cong. of Naples, union with Poland, 1370; 1526, Austrian; two centuries of wars with Turkey; 1848, revolution under Kossuth, suppr. 1849 with help of Russ.; Hung. an Austrian crown land; 1867, settlement: independent govt. and (Honved) army; Oct., 1918 Republic (Count Karolyi); March, 1919, Communist Soviet Repub. (Béla Kun); Rumanian occupn.; re-establishment of monarchy; regent, Nik. v. Horthy; 1920, Peace of Trianon (*q.v.*); 1923, entry into League of Nations.

HISTORY: Huns, Asiatic people from 2000 B.C. on borders of China; their attack on West in A.D. 374 set Germanic peoples of Black Sea (Goths, Alans) wandering (Migration); their leader Attila (d. 454) ruled from Passau to Caspian Sea, and penetrated to neighbourhood of present Orleans (battle on Catalaunian Plain 451) and as far as Rome. Descendants of Huns in S. Russia, Hungary, and Bulgaria.

Hunstanton, seaside resort, Norfolk, on the Wash; pop., 4,300; at *Old H.*, 1 m. S., is *H. Hall* (15th century).

Hunt, **Jas. Hy. Leigh** (1784-1850), Eng. poet, essayist, and critic; friend of Lamb, Byron, Keats, Shelley, etc. *Men, Women and Books*, 1847; *Autobiography*,

1850. **H., Wm. Holman** (1827-1910), Brit. painter; pre-Raphaelite school; *The Light of the World*.

Hunter, John (1728-93), Brit. physiol. and surgeon; elected F.R.S., 1767; fndd. museum; *Treatise on the Blood, Inflammation and Gun-shot Wounds; Certain Parts of the Animal Economy*. His brother, **William** (1718-1783), Brit. anatomist and physician; *Anatomical Description of the Human Gravid Uterus*.

Huntingdon, Selina, Ctess. of (1707-91), Eng. religious leader; dau. of Earl Ferrers; devoted herself to propagation of evangelical religion after death of husband and sons, and fndd. sect known as the *Countess of H.'s Connexion*.

Huntingdon, 1) co. tn., Hunts, Eng., on *Great Ouse*; pop., 4,100; birthplace Oliver Cromwell. 2) Tn., Pa., U.S.A. pop., 7,560.

Huntingdonshire, Hunts, midland co., Eng.; area, 366 sq. m.; pop., 56,200; surface generally flat, mainly agric; co.tn., *Huntingdon*.

Huntington, tn., W. Virginia, U.S.A., on Ohio Riv.; pop., 75,550; motorcars, machinery, furniture.

Hunts, abbr. Huntingdonshire.

Huntsman, person in charge of a pack of hounds, under the "Master."

Hunyadi, Joh. (1387-1456), Hung. nat. hero; statesm. and warrior; deft. Turks, 1443-54.

Huon pine, *Dacrydium franklinii*, Tasmanian tree belonging to the Conifers (q.v.); much prized for its close-grained timber (used for shipb.); reaches 100 ft., with circumference at base to 20 feet.

Hupoh, prov., centr. China, drained by Riv. Yang-tse-kiang, 72,000 sq. m.; pop., 28,616,600. Cultivation of tea; iron ore. Cap., *Hankow*.

Hurdle, (agric.) movable framework, usu. of osier, used as temporary fence for sheep-pens, etc. **H. race**, race over hurdles; *usual distances*: 120 yds. with 3 ft. 6 in. h.; 220 and 440 yds. with 2 ft. 6 in. h. ("low hurdles"); at Olmp. Games; 110 and 400 mtrs. Rec. for 440 yds. by J. Gibson (U.S.A.), 1927: 52 $\frac{2}{3}$ seconds.

Hurlingham, house and grounds in Fulham, Middx., used as sports and social club since 1869; orig. pigeon-shooting club; became headquarters of Brit. polo, 1874. Grounds cover abt. 80 acres.

Huron, Lake, second largest of the great Canadian lakes; 22,775 sq. m., with densely pop. shores (except in the N.); connected with Lake Erie by St. Clair Riv.; abounds in fish.

Hurons, N. Amer. Inds. of Iroquois nation; now almost extinct.

Hurricane, violent cyclonic storm or tornado in W. Indies or tropical Atlantic; highest velocity of wind; *see* BEAUFORT SCALE.

Hurst, Sir Cecil J. B. (1870-), Brit. jurist; legal adviser For. Office, 1918-29; Judge Perm. Ct. Internat. Justice, The Hague; Brit. member, Perm. Ct. of Arbitration, 1929.

Hurst Park, Eng. race-course, 14 m. from London; race-meetings in Apr., June, July, Aug., and Nov., and steeplechases in Jan., Feb., Mar., and December.

Huskisson, Wm. (1770-1830), Eng. statesm. and financier; M.P., 1796; Sec. of Treasury, 1804-06, 1807-09; pres. of Board of Trade, 1823-27; Colonial Sec., 1827-29; accidentally killed at opening of Liverpool and Manchester railway.

Huss, or **Hus**, John (c. 1373-1415) Bohem. reform. and martyr; condemned by Council

of Constance, 1415, and burned at the stake.

Hussites, adherents of John Huss, organised, after his death, as a political and religious party; rose in arms agst. Emp. Sigismund, 1419, and built city Tabor in Bohemia; continued mainly successful campaign under two generals named Procopius, culminating in victory over imperialists, 1431, followed by short peace. H. then split into moderate (*Utraquists*) and extremist (*Taborites*) sections. Taborites defeated at Lippau 1434, and finally merged with the *Bohemian-Moravian Brethren* (q.v.). Utraquists were granted toleration by treaty of Iglau, 1436, but opposed Sigismund's successor to Bohemian crown and were defeated 1438; they became absorbed partly by R.C.s, partly by Lutherans.

Hussar, soldier of light cavalry, with distinctive uniform; 9 hussar regts. in Brit. Army: 3rd the King's Own H., 4th Queen's Own H., 7th Queen's Own H., 8th King's Royal Irish H., 10th Royal H. (Pr. of Wales's Own), 11th H. (Prince Albert's Own), 13th/18th H., 14th/20th H., 15th/19th Hussars.

Husseln, Ibn ali (1856-1931), son of Ali Pasha, Grand Sheriff of Mecca, whom he succeeded, 1909; with Brit. support proclmd. Kg. of Hejaz, 1916; acted with the Allies agst. the Turks and proclmd. independence of the Caliphate, Jan., 1918; abdicated 1924, on capture of Mecca by Wahabists.

Husserl, Edmund (1859-), Ger. philos.; fndd. School of Phenomenology (q.v.); *Ideas*

Hutten, Ulrich von (1488-1523), Ger. poet, knight, and humanist.

Hutton, James (1726-97); Eng. geolog.; fndd. Plutonism (q.v.); *Theory of the Earth*,

Huss Going to the Stake: Contemporary Miniature

Aldous Huxley

or an Investigation of the Laws Observable in the Composition, Dissolution, Restoration of Land upon the Globe.

Huxley, Aldous (1894-), Eng. novelist; *Cranie Yellow, Point Caunter Paint*; grandson of **H., Thos. Henry** (1825-95), Eng. biologist; pres. of Royal Society, 1881-85; *Man's Place in Nature*; essays.

Huygens, Christian (1629-95), Dut. physicist; discv'd. laws of collision of elastic bodies; adapted pendulum to clocks; originator of wave theory (*q.v.*) of light; explained double refraction of crystals.

Huysmans, Joris Karl (1848-1907), Fr. novelist and mystic; *La-Bas*; *A Rebours*.

Huysum, Jan van (1682-1749), Dut. painter; painted esp. fruit and flowers.

Hvar, Lesina, Dalmatian isl., S. Jugoslavia; 116 sq. m.; vineyards and orchards; cap., *Lesina*, on S.W. coast, pop., 3,800; bathing resort.

Hwang-ho: see YELLOW RIVER.

Hyacinth 1) (bot.), *Hyacinthus orientalis*. liliaceous plant, with spikes of bell-shaped white or coloured flowers. The blue-bell or wild H. (*Scilla nutans*), grows abundantly in woods in springtime. 2) (Mineral.) Semi-precious stone, usually of blue or dark colour, the *jacynth* of ancient writers; red or brownish variety of zircon (*q.v.*); brownish variety of garnet, cinnamon-stone (*q.v.*).

Hyades, 1) (Gr. myth.) nymphs, daughters of Atlas and sisters of Pleiades. 2) (Astron.) Group of stars including Aldebaran in constell. Taurus (*q.v.*).

Hybrid, (biol.) any cross-bred animal or plant.

Hybris, arrogance, a com. subj. in Gk. trag.; as offence to gods it leads to disaster.

Hyde, munic. bor., Cheshire, Eng., 7 m. E. of Manchester; cotton-mills; pop., 32,100.

Hyde Park, London, covering c. 360 acres; rides (Rotten Row), drives, Serpentine Lake, bird sanctuary; westwards, Kensington Gardens (see KENSINGTON PALACE).

Hyderabad, Haidarabad, 1) largest and most important native State in India (Nizam's dominions), in Deccan, betw. Madras and Bombay; area, 82,700 sq. m.; pop., 12,471,770 (nine-tenths Hindus, though State is Mohammedan); surface a tableland; chief rivs., Godavari, Kistna; rice, wheat, cotton, fruit, vegetables; coal and iron. 2) Cap. of State, walled and fortified; pop., 377,000 (mainly Mohammedans); carpets, textiles, paper mills. 3) City, cap. dist. same name, and historical cap. of Sind, India, close to Riv. Indus; pop., 81,850;

manuf.: silk, brocades, gold and lacquer work.

Hydnum, genus of fungi (*toothed*), most of wh. are edible.

Hydra, isl., Greece, S.E. of Argolis, betw.

Hyde Park Corner

Gulfs of Nauplia and Aegina; Hydriot fleet distinguished in Gr. War of Independence.

Hydra, 1) (Gr. myth.) dragon of Lake Lerna in Argolis, having 9 heads, each of wh., on being cut off, was replaced by 2 new ones; killed by Hercules. 2) (Astron.) Constell.: see PL., ASTRONOMY, S.C.H., D. and E. 3) (Zool.) Microscopic fresh-water polyp, found in ponds and shallow streams, where it attaches itself to submerged plants, and by means of its tentacles captures its prey.

Hercules slaying the Hydra

Hydrangea, one of a genus of Asiatic and N. Amer. shrubs, cultivated in gardens and greenhouses for its handsome globular clusters of pink, white, or blue flowers.

Hydrant, valve attached to a water system, for drawing off water in case of fire or bursting of pipes.

Hydrarg., abbr. *hydrargyrum*, mercury.

Hydrates, (chem.) in inorganic chem. compounds of metals or metal-like radicals with group—OH; e.g., sodium H., NaOH, ammonium H., NH₄OH. In organic chem. H. are compounds formed by addition of water.

Hydraulic cement, (bldg.) type of cement (*q.v.*) which hardens under water (used for harbour works).

H. motor: see WATERWHEEL; TURBINE. **H. press**, pressure applied to small-section piston, is transmitted to liquid wh. forces large-section piston upwards; power is in propor. to cross-section of cylinder. **H. ram**, pumping machine; utilises pressure of mass of flowing, suddenly arrested, water to raise the level of a part of it.

Diagram of Hydraulic Press

Hydraulics, science of liquids, esp. water, in motion; applied also to construction and maintenance of river, canal, and harbour works.

Hydrazine, Diamide (chem.), sym. N_2H_4 , m.p. 1.4° ; b.p. 113.5° ; colourless, poisonous liquid; used in the produc. of dyes and lead azide.

Hydria, Gr. water-pot, pitcher. See VASE.

Hydrides, (chem.) compounds of hydrogen with metals, e.g., Cu_2H_2 .

Hydrocarbons, chem. compounds of carbon and hydrogen only; number limitless. *Aliphatic* hydrocarbons have C atoms arranged in chain, *aromatic* in ring or rings, generally 6 forming hexagon, or honeycomb structure of hexagons. *Paraffins* (q.v.) are saturated aliphatic Hydrocarbons, having max. amount of H.; very inactive chemically. *Olefines* (q.v.) are unsaturated aliphatic Hydrocs. Benzene, C_6H_6 , has one ring; naphthalene, $C_{10}H_8$, two; phenanthrene, $C_{14}H_{10}$, three. No limit is known. Hydrocs. are regarded as the parents of most organic compounds, which are obt'd. by substituting other elements, or groups of elements, for hydrogen; e.g., $-OH$, giving alcohols, phenols, sugars; $-COOH$, giving acids; $-CHO$, aldehydes; $-NH_2$, amides, etc.

Hydrocele, collection of fluid within membrane covering testicle.

Hydrocephalus, (med.) an abnormal condition, in wh. there is great accumulation of fluid in the cavities of brain; may be either congenital or acquired.

Hydrochloric acid, (chem.) sym. HCl ; water-soluble gas prep. by direct combination of hydrogen and chlorine, or by action of strong sulphuric acid on common salt. Spirit of salt is an impure solution of the gas (28 to 32%). Both are widely used in many industries.

Hydrocyanic acid: see CYANOGEN.

Hydrodynamics, mechanics of fluids in motion; sc. of currents.

Hydro-extractor, centrifuge (q.v.) for extracting moisture from substances, e.g., washed fabrics, sugar crystals.

Hydrofluoric acid, (chem.) sym. HF ; see FLUORINE.

Hydrogen, (chem.) element, sym. H ; at. wt. 1.0078; lightest of the elements; tasteless, odourless, colourless gas, very inflammable; does not occur free in nature to any great extent, but believed to be pres. in vast quant. in sun. When burned in air forms water (H_2O); may be produced by action of sulphuric acid on zinc; commercially prepd. by reduction of steam, by passing it over white-hot coke; used in welding (oxyhydrogen flame); in manuf. of soap and margarine and to fill balloons and airships. **H. Sulphide**, sulphuretted hydrogen (H_2S); colourless,

foul-smelling, poisonous gas; occurs nat. in sulphur springs (e.g., Harrogate) and is produced by decomposition of albuminous substances; forms sulphides with many metals.

Hydrogenation, formation of higher hydrocarbons (e.g., petrol) from lower hydrocarbons (e.g., powdered coal) treated with hydrogen under heat and pressure.

Hydrogeology, science of the occurrence and behaviour of water in nature.

Hydrography, descriptive science treating of the bodies of water on the earth's surface.

Hydrology, science treating of the subterranean distribution of water.

Hydrolysis, (chem.) action of water as acid or alkali, or both, upon chem. compound, causing its decomposition. Water is chemically $H.OH$, and thus analogous both to acids, e.g., HCl , hydrochloric acid, and alkalis, e.g., $NaOH$, caustic soda. Hence salt of strong base and weak acid, e.g., sodium carbonate (washing soda, Na_2CO_3) is hydrolysed by water giving strongly alkaline solution; conversely ferric chloride, $FeCl_3$, gives acid solution. In organic chemistry, hydrolysis of esters (q.v.) is sometimes called saponification.

Hydrometer, appar. for ascert. sp. gr. by means of a floating elongated body wh. is submerged all but a narrow stem, wh. may be graduated to read direct, or in deg. (Baumé, Twaddell), or may be bight. to same mark every time by add. of weights.

Hydronephrosis, (med.) distension of kidney and destruction of its tissue, due to obstruction to flow of urine from kidney to bladder.

Hydrophobia: see RABIES.

Hydroplane, form of gliding motor boat, with planes attached, to enable it to skim or glide on surface of water; plane attached to submarine to enable it to sink or rise.

Hydrosphere, waters on the earth's surface collectively; aqueous vapour of the atmosphere.

Hydrostatics, sc. of equilibrium of fluids; *hydrostatic paradox* principle that a large wt. of fluid in one tube may be balanced by a small weight in another.

Hydrozoa, animals forming a class of coelenterata (q.v.), including jellyfish and polyps.

Hyena, powerful, ungainly carnivore; nocturnal, gregarious, and cowardly, feeding on carrion and carcases; powerful teeth and jaw muscles enable H. to crack and crush bones of animals killed by lions. Three species: *striped*, native of India, S.W. Asia, N. and E. Africa; *brown* and *spotted*, both natives of S. Africa.

Hyena

Hyères, tn., dépt. of Var, France, E. of Toulon, nr. Médit. coast; pop., 19,820; health resort. Perfumery, cultivation of flowers, fruit, vineyards.

Hygiene, science of maintaining the health of the individual or community; sanitary principles and methods. *See* PUBLIC HEALTH; REFUSE.

Hyginus, St., traditionally the 8th of the popes, c. 138-42; 1st gnostic heresies in Rome began to appear during his pontificate.

Hygrometer, (hys.) instr. for determ. humidity of atmos.; gen. by a hair stretched taut, the length incr. in proportion to the incr. of humidity and moving pointer over a scale. Most accurate is *wet-bulb thermometer* (q.v.).

Hygroscopic, attracting moisture; applied to substances wh. draw moisture from the atmos. (calcium chloride, sulphuric acid, etc.), used in chem. as drying materials; when they become moist or liquid as a result, they are called *deliquescent*.

Hyksos, Syrian-Semitic nomad race of Asia Minor; penetrated into Egypt in 18th-16th cents. B.C.

Hyle, matter, as distinguished from form; hence, **Hylism**, philosoph., view that matter is the principal source of evil. **Hylotheism**, belief (esp. among primitive peoples) that God and matter are one. **Hylozoism**, philosoph. view that all matter is endowed with life.

Hymans, Paul (1865-), Belg. statesm.; Pres. 1st Assembly L. of Nations, 1920.

Hymen, 1) (myth.) Gr. god of marriage, represented as a youth with nuptial torch and bridal veil. 2) (Med.) Membrane across the entry to the vagina.

Hymenoptera, order of insects with two pairs of wings which function in unison; containing a very large number of known species of much varied habit; metamorphosis complete. Included in the order are: social and solitary bees and wasps; ants; ichneumons and saw-flies.

Hymettus, now **Trelovuni**, heath-covered mountain S.E. of Athens, 1,030 ft. high, famous for its sunset glow; marble quarries; honey.

Hymn, solemn song of praise or triumph addressed to a god or gods; in Christian worship, a song intended to be sung in church or as part of a service.

Hyoscine: *see* HYOSCYAMINE.

Hyoscyamine, (chem.) alkaloid, $C_{17}H_{23}NO_4$, one of the poisonous constituents of henbane, *Hyoscyamus niger*, the other being hyoscine, $C_{17}H_{21}NO_4$.

Hyoscyamus (*henbane*) an active principle in hyoscine or scopolamine, used in med. as a hypnotic; admin. with other hypnotics, to induce in child-birth partial anaesthesia, pop. called "twilight sleep."

Hyperæmia, (med.) increased flow of blood to part of the body.

Hyperbola, conic section having two symmetrical branches extending to infinity, such that difference of distances from any point on the curve to two fixed points, the foci, is constant. The minor axis of the H. is the centr. vertical line of the major axis. **Hyperbolic speech**, exaggeration of fact or description.

Hyperbola

Hyperboloids, curved planes, produced by the rotation of a hyperbola (q.v.) either round the major axis, giving a H. of one nappe, or round the minor axis, giving a H. of two nappes.

Hyperboreans, myth. H. of one nappe H. of two nappes barbaric race Hyperboloid of the N.; denizens of the N. Polar regions.

Hypercatalectic, applied to a verse having addit. syll. on 2 ft., after last complete dipody, on double foot.

Hyperion, 1) (Gr. myth.) god of the sun, succeeded by Apollo; subject of an incomplete poem by Keats; 2) (Astron.) 7th satellite of Saturn (q.v.).

Hypermetropia, long sight; inability to see clearly at short distances, owing to excessive shortening of the axis of the eye. Can be corrected by lenses (eyeglasses).

Hypermetropia

Hyperpiesia, (med.) abnormally high blood-pressure, usu. due to thickening of arteries or to kidney disease, but may be of nervous origin.

Hyperthesis, transference of letter from own syll. to syll. immed. before or after; e.g., *an adder* from *a nadder*; *a newt* from *an eat*.

Hypertonic solution, solution of greater osmotic pressure (q.v.) than the blood.

Hypertrophy, (med.) excessive growth of an organ of the body.

Hypnos, (Gr. myth.) god of Sleep.

Hypnosis, state of sleep or somnolence, artificially induced by power of the eye, by words, or magnetic passes. The

Head of Hypnos

will and imagination of hypnotised person (see **MEDIUM**) are governed by those of the **hypnotist**, and the consciousness of the medium is arrested to a greater or less extent. **H.** requires strong concentration on both sides and is sometimes applied for remedial purposes. Its use by unqualified persons is dangerous.

Hypochlorites, salts of hypochlorous acid (HClO), very unstable; see **CHLORIDE OF LIME** (basic calcium hypochlorite). **Sodium h.** made by electrolysis (*q.v.*) of common salt, very widely used as antiseptic under various names: Eusol, Dakin's Solution, Eau de Javelle.

Hypochondriac, valetudinarian; one who complains of imaginary ailments. **Hypochondria**, state of intense mental receptivity to physical ailments.

Hypodermic syringe: see **INJECTION**.

Hypogynous plants, those in wh. the ovary is placed below the base of the perianth (*q.v.*), as in the rose.

Hypophosphites, compounds of bases with hypophosphorous acid, H_3PO_2 ; *e.g.*, **Sodium H.**, used as a tonic.

Hypostasis, substance, reality, essence; (theol.) any one of the persons of the Holy Trinity. **Hypostatic union**, union of Christ's human nature to the hypostasis or person of God the Word.

Hyposulphite of soda, (chem.) sodium-thiosulphate ($\text{Na}_2\text{S}_2\text{O}_3$); used in photography; dissolves out silver-bromide in film which has been unaffected by development.

Hypotenuse in a right-angled triangle is the side opposite the right angle.

Hypothecation, pledging of property to a creditor, property itself remaining in possess. of debtor. See **MORTGAGE**.

Hypothesis, an admittedly unproved assumption adopted as a basis of inference, or for the sake of argument.

Hypothetical imperative, moral law wh. only needs to be accepted for the fulfilment of some desired condition or end; see **CATEGORICAL IMPERATIVE**.

Hypotonic solution, a solution of lower osmotic pressure (*q.v.*) than the blood; causes the red corpuscles to swell up and burst.

Hypsometry, (math.) measurement of differences in elevation betw. two points on the earth's surface by differences in atmos. pressure (barometer); also by taking the distance from both points and the inclination of the connecting line (trigonom.); or by levelling, most accurate method (*q.v.*).

Hyrax, small ungulate of rodent-like appearance, somewhat resembling a large guinea-pig; the *coney* of Scripture; native of Africa and Syria; majority of species live in colonies among cracks and crannies of the rocks; some are arboreal.

Hyssop, *Hyssopus officinalis*, blue-flowered herb used in folk-medicine as a stimulant, a carminative, and in colds and lung complaints.

Hysteresis, lag of an effect behind its cause. In electro-magnetism, lagging of magnetisation and demagnetisation of iron, steel, etc., behind the current acting; results in loss of energy in a complete cycle, wh. appears as heat in the metal.

Hysteria, functional nervous disorder, frequently imitating genuine organic disease, and marked by extreme excitability and weakened will power; usu. mental in origin and due to inability to cope with the difficulties of life.

Hysteron proteron, (Gr.) gram. or rhetor. inversion of the natural and logical order of words or clauses and ideas; logical fallacy of begging the question.

Hythe, munic. bor., Kent, one of the Cinque Ports; seaside resort; army Small Arms School; pop., 8,400.

I, (chem.) symbol of Iodine.

Ia., abbr. Iowa.

Iago, in Shakespeare's trag. *Othello*, type of calculating villain.

Iamblichus (d. c. A.D. 333), Syrian philo.; fndd. Neoplatonism (q.v.).

Iambus, met. foot —.

Iapetus, 1) (Gr. myth.), one of the Titans, son of Uranus, father of Prometheus and Atlas, reputed ancestor of the human race. 2) 8th satellite of Saturn (q.v.).

Ib., abbr. *ibidem* (Lat.), in the same place.

Ibadan, tn., S. Nigeria; trading centre; pop., 175,000.

Ibañez, Vicente Blasco (1867-1928), Sp. novelist; *The Four Horsemen of the Apocalypse* 1916; (Eng. trans., 1918).

Ibar, riv., trib. of the W. Morava; rises in the Montenegrin highlands.

Iberian Peninsula, collective name for Spain and Portugal; area, c. 232,100 sq.m.; derived from anc. Iberian race who lived in region of Riv. *Ebro* (Iberus) and from whom the Basques (q.v.) are descended.

Ibex, generic name of various species of wild goat inhabiting mountain regions of Eur., Asia, and Abyssinia. Horns are long, laterally compressed, sometimes spirally twisted.

Ibidem (Lat.), in the same place; used in giving literary references.

Ibis, medium-sized somewhat heron-like bird of the family *Ibidae*, with long curved bill. The *Sacred I.* of the anc. Egyptians still inhabits the Upper Nile regions. *Glossy I.*, breeds in marshes of Lower Danube and similar situations in Africa and India. About 20 genera have been described.

Iblis, **Eblis**, name for the devil in Moslem theology; another name is *Shaitan*.

Ibsen, Henrik (1828-1906), Norw. dramat. and poet; *Peer Gynt*, 1867; *Pillars of Society*, 1877; *A Doll's House*, 1879; *Emperor and Galilean*, 1873.

Ibycus, (fl. c. 550 B.C.) Gr. lyric poet; poems in the Gk. Anthology.

Icarus, (Gr. myth.) son of Daedalus (q.v.); attempted to fly with wings made by his father but the sun melted the wax with wh. they were attached to him, and he was drowned in the sea.

Ice, 1) frozen water; water in crystalline, solid form assumed at temp. of 32° Fahr. and under. 2) Name given to sev. frozen confections, broadly divided into *cream* and *water* ices; cream ices may consist either of genuine cream or of some custard preparation frozen and variously flavoured; water ices are a frozen syrup of sugar and water with flavouring added; a *sorbet* is a water ice with the addition of fruit and a liqueur flavouring. **I.-axe**, mountaineering implement for cutting footholds in ice, etc.

I. berg, large mass of floating ice broken off from a glacier or polar ice-floe; often of immense size, and always with greater part submerged and invisible. **I.-boat**, boat with runners for sailing on ice. **I.-box**, wooden cupboard or chest with double walls, filled with materials non-conductive to heat and having space for ice; for keeping food fresh. **I.-breaker**, ship with strong, curved and pro-

jecting bows, wh. rise onto ice-packs thr. the forward thrust of propellers, and break the ice by ship's weight. **I.-hockey**, game resembling hockey (q.v.), played on skates, with a "puck" (hard rubber disk) instead of a ball. **I.-plant**, *Mesembryanthemum crystallinum*, biennial plant, native of S. Europe; under-surface of leaves is covered with crystalline drops giving appearance of ice. Formerly used in medicine as a demulcent and diuretic.

Ice Age: see GLACIAL PERIODS.

Ice Fjord, deep gulf, W. coast Spitsbergen; 28 glaciers.

Iceland, Island, island kgdm. in N. Atlantic Ocean betw. Greenland and the Faeroes; 39,698 sq.m.; only the coastal areas (16,750 sq.m.) inhab.; pop. 107,000 (mainly Lutherans). Though N. coast touches Arctic Circle, climate relatively mild. Coast-line deeply indented by fjords; penins. in N.W. almost sep. from rest of country. Surface barren and mountainous (to 6,952 ft.), mainly volcanic rock and lava; over 100 volcanoes, 25 active (Hekla, Katla, etc.), hot springs (geysers); sulphur springs; earthquakes; huge snow-fields (Vatnajökull in S.; 3,300 sq.m.), with glaciers descending almost to sea-lvl.; many lakes (Thing-vallavatn, in S.W.) and rivers; grassy plains (almost treeless), with cattle, sheep, and horses; root-crops cultivated; all cereals imported; fishing, whaling, and sealing; exports salt fish, train-oil, wool, eiderdown, Iceland moss. No rlys.; few roads. Cap., *Reykjavik*. *Constitution*. Intestinal juice, digestive fluid, secreted by glands of the intestine. **I. obstruction**, complete cessation of passage of faeces on account of blocking of the interior of the intestine; may be due to twisting of small intestine, to strangulation of intestine in a hernia (*q.v.*), etc. **I. paralysis**, inhibition of movements of intestine (peristalsis); may occur in peritonitis, or after abdominal operations. **I. ulcer**, ulcer of mucous membrane of intestine. **Duodenal ulcer** is fnd. in first part of small intestine; in typhoid, ulcers are fnd. in small intestine; in I. tuberculosis they may occur in small and larger intestine; in dysentery in large intestine.

Intestinal tube, soft rubber tube, abt. 10 in. long, and abt. the thickness of little finger, employed by passing it into the rectum (*q.v.*), to remove intestinal gases, or to wash out the intestine.

Intestine, that part of alimentary canal extending from stomach to anus. 1) **Small I.**, 23 ft. long, divided into 3 parts: from above downwards, duodenum, jejunum and ileum. 2) **Large I.**, 6 ft. long, divided into 3 parts: caecum, colon, and rectum. Digestion, wh. begins in stomach, is continued in I., the indigestible matter being secreted as faeces (stools). Rhythmic movement of muscles of I. (see PERISTALSIS) drives contents onward. I. fills greater part of abdominal cavity with its numerous coils.

In toto (Lat.), totally, entirely.

Intrados (bldg.): see SOFFIT.

Intra muros (Lat.), within the walls.

Introit (Lat.), entrance, anthem sung as priest goes up to altar to celebrate Mass.

Intrusion, (geol.) rock-vein which has been forced in molten condition into other rocks.

Intuition, instinctive mental perception derived without conscious reasoning. **Intuitionism**, philosophic view that the sense of good and evil is inherent.

Inunction, (med.) application of an ointment or oily substance to the skin; congenital syphilis in babies is often treated by mercurial inunction.

In utrumque paratus (Lat.), prepared for either alternative.

Inv., abbr. *invenit* (q.v.).

Invalides, Hôtel des, building in Paris on l. bank of Seine; fndd., 1670, by Louis XIV as a refuge for aged or disabled soldiers; façade is 690 ft. wide, and the bldg. as a whole covers 16 acres; part is now used as barracks and part as military museum. The church of St. Louis on S. side of main courtyard was built by Jules Mansard, c. 1706; under the dome is the sarcophagus of Napoleon I, whose remains were removed from St. Helena and placed in this chapel in 1840; present tomb was made by order of Louis Philippe, 1841.

Invar, an alloy containing 64.3% steel and 35.7% nickel, of very small thermal expansion, and therefore used for pendulums and balances in clocks, and for various scientific instruments.

Invenit (Lat.), he (or she) designed it; abbr. *inv.*, often placed after the name of the original artist on copies of paintings, engravings, etc.

Inveraray, royal burgh, Argyllsh., Scot., on Loch Fyne; vill. and anc. castle; pop., 450.

Invercargill, tn. on S. coast S. Island, N. Zealand, on New River Harbour; pop., 24,100; centre of grazing and farming dist.; sawmills, breweries, foundries.

Inveresk, vill. on Firth of Forth, Midlothian, Scotland, 6½ m. S.E. Edinburgh, nr. battlefield of Pinkie. Paper manufacture.

Invergordon, police burgh and seapt., Ross and Cromarty, Scotland, on N. shore, Cromarty Firth; pop., 1,400; naval base in World War.

Inverness-shire, largest co. in Scot., area, 4,088 sq. m.; pop., 82,100; includes all the Outer Hebrides, except Lewis. Mountainous highlands (*Ben Nevis*, 4,406 ft.), deer forests, grouse moors, wooded country.

Inverness, co. tn., "capital of Highlands," on the Ness, at N. end of the Caledonian Canal; pop., 22,600; woollen industries, tourist centre.

Inversion, (chem.) conversion of a dextro-rotatory (q.v.), into a laevo-rotatory compound.

Invertebrates, (zool.) animals with no spinal column, e.g., insects, snails, worms.

Invert sugar, mixture of glucose (q.v.) and fructose, two simple sugars produced by heating cane-sugar with dilute acid. So called because the mixture is laevo-rotatory, whilst orig. cane-sugar is dextro-rotatory to plane of polarised light. See POLARISATION.

Investiture, formal bestowal of an office, benefice, etc., with the insignia, etc., pertaining to it; esp. (hist.) that of a bp., dispute as to which, betw. pope and emp., was adjusted by Concordat of Worms (1122), which settled that a bp. shd. be invested with spiritual power (by virtue of his *ring and crozier*) by pope, and with temporal power (by virtue of his sceptre) by the emperor.

Investment, (finan.) amt. of capital (cash or other securities) contribtd. by a person to a co. through purchase of shares or debentures (U.S. stocks or bonds); also applied to purchase of real estate, etc. **I. trust company**, finan. co. investing its capital in a large no. of diverse concerns and Govt. loans, affording best and safest rates of interest. Dividends are pd. out of income from invstmnts.; in Gt. Brit. income from turnover of invstmts. is *not* distribtd. as dividends, but re-invested and goes to increase *hidden reserve* (q.v.). Amer. I.T.'s do not keep to this rule. See FINANCIAL TRUSTS.

In vino veritas (Lat.), "in wine is truth"; a drunken man shows his true self.

Invisible exports and imports: see BALANCE OF INTERNATIONAL PAYMENTS.

Invoice, statement concerning shipment of goods, incl. specifications, quantities, price, charges, discounts, method of transport, etc.

Consular I., reqd. by U.S. Govt. for goods imported; verified by consul for purposes of *ad valorem* duty assessment. **Preferential Tariff I.**, or *Certificate of Origin* (q.v.), special form of I. used to obt. pref. duty for Empire goods shipped to certain dominions, e.g., Canada, Australia.

Involution, (med.) return of an organ to its orig. form and size after deformation due to physiol. causes, e.g., I. of uterus after childbirth.

Io, (Gr. myth.) a maiden beloved of Zeus; changed into a white heifer by Hera, who sent a gadfly to torment her.

Iodine, (chem.) element of halogen group (q.v.), sym. I.; at. wt. 126.932; sp-gr. 4.95; present in sea water, seaweeds, and Chile saltpetre (q.v.). A weak solution in alcohol (*tincture of I.*) widely used as antiseptic; thyroid gland (q.v.) secretes thyroxin, a hormone contng. iodine. *Potassium iodide* used in treatment of goitre. **Iodides** widely used in photography.

Iodine State: see SOUTH CAROLINA.

Iodoform, crystalline compound of iodine; yellow solid with peculiar, strong odour (CHI₃); used as dry antiseptic for dressing wounds, etc.

Ion, (chem.) an atom or group of atoms with an electric charge. May be present in gases or liquids, poss. also in solids. Ions formed in gases by 1) action of ultra-violet α — or γ — rays; 2) α — and β — rays from radio-active substances (*q.v.*); 3) action of powerful electric field upon a few Ions causes these to move very rapidly, and ionise neutral gas molecules by collision; 4) spontaneous ionisation by collision of gas molecules. Ionised gas is electrically conducting, and continues to conduct if voltage applied is sufficient to produce new ions continuously by collision. Hence phenomena of gas discharge tubes and electric arc. Ions in liquids are produced by spontaneous splitting up of dissolved substances. See **IONIC THEORY**.

Iona, isl., Argyllsh., Scot., Inner Hebrides, 3 m. by 10; cathed. (1203); landing-place St. Columba in 563; pop. 175.

Ionia, (anc. geogr.) dist., W. coast of Asia Minor; c. $9\frac{1}{2}$ m. N. to S.; bounded on E. by Lydia; watered by Rivs. Hermus (Gediz-Chai), Cayster (Kutchuk Mendere), and Macander (Menderes Chai); colonised by Ionians (*q.v.*). In historical times, formed a league of 12 cities, incl. Miletus, Ephesus, and the isls. and cities of Samos and Chios; joined c. 700 B.C. by Smyrna (orig. Aeolic). Its common sanctuary (Panionium) stood on headland of Mycale, opp. Samos. Produced Ionian schools of philosophy and of art.

Ionian Islands, group of seven Gr. isls. off W. and S. coast of Greece; comprising Corfu, Cephalonia, Levkas (Santa Maura), Ithaca, Zante (Zakynthos), Paxos, and Cythera; area 1,090 sq.m.; pop., 264,500; mountainous (*Mt. Nero*, in Cephalonia, 5,311 ft.); wine, olives, fruit; marble, salt, sulphur; freq. earthquakes. Brit., 1815–1863.

Ionian philosophy, oldest Gr. school of natural philos. (Thales, Anaximander, Anaximenes, 5th and 6th cents. B.C.), wh. explained existence of universe in terms of matter, movement, and energy.

Ionians, one of the main divns. of the Gr. people. Trad. home N.E. Peloponnesus, whence they were expelled by Achaeans, migrating to Attica (Athens). Thence fndd. Gr. cities of Ionia (*q.v.*). Ionians of Asia Minor conquered by Lydians under Croesus (c. 560 B.C.); subject to Persians (after 546). *Ionian Revolt*, led by Miletus (500), and assisted by Athens and Eretria, brought about Persian Wars with Greece (490, 480). Indept. after 479. After invasion of Alexander the Great (334), subject to Macedonia until Rom. conquest of Asia Minor (190).

Ionian Sea, betw. W. Greece and S.E. Italy.

Ionic order: see **COLUMN**.

Ionic theory, theory formulated by Clausius and Arrhenius to effect that all acids, alkalis, and salts are split up (dissociated) when dissolved in water (and some other liq.) into *ions*, elec. charged atoms, or atomic groups; positively charged groups (metals, hydrogen, basic radicles such as ammonium) called *kations* (*q.v.*); negatively charged (acid radicles or non-met. elements), *anions* (*q.v.*). Charge on monovalent iron = 156×10^{-15} Coulomb; double this, etc., for divalent, etc. For *migration of ions* on passage of elec. current, see **ELECTROLYSIS**.

Ionisation, 1) (chem.) splitting up of a chem. substance into ions (*q.v.*); solutions in water, gases. Heavieside layer (see **WIRELESS TELEGRAPHY**) due to I. of air. 2) (Med.) The introduction of medicaments in the form of ions (zinc, mercury, quinine, etc.) into the body by passing an elec. current thr. a solution and the body.

I.O.U., abbr. I owe you.

I. of W., abbr. Isle of Wight.

Iowa, ("Hawkeye") State, U.S.A., betw. Mississippi and Missouri rivs.; 56,147 sq.m.; pop., 2,500,000; maize, wheat, potatoes, etc.; stock-breeding; coal-mining; cap., *Des Moines*.

I.P.D., abbr. *in praesentia Dominorum* (Lat.), in the presence of the Lords (of Session—Scotland).

Ipecacuanha, plant indigenous to Brazil, also cultivated in Malaya. From root the well-known emetic (*I. wine*) is prepared. Chief active princ. is emetine.

Iphigenia, (Gr. myth.) dau. of Agamemnon and Clytaemnestra, offered as a sacrifice at Aulis when unfavourable winds hindered Greeks from setting out for Troy; rescued by Artemis and made priestess at Tauris, where her brother Orestes discovered her. **I. in Aulis**, and **I. in Tauris**, tragedies by Euripides (*q.v.*).

I.P.I., abbr. *in partibus infidelium* (Lat.), in the regions of the unbelievers.

Ipsambul: see **ABU SIMBEL**.

Ipsé dixit (Lat.), he said it himself; phrase applied to a statement emanating from an authoritative source.

Ipsissimis verbis (Lat.), in these very words.

Ipsso facto (Lat.), by the fact itself; self-evident.

Ipswich, 1) co. tn., Suffolk, Eng., on Riv. Orwell; pop., 87,600; birthplace Card. Wolsey; agric. machinery, breweries. 2) River port, Mass., U.S.A.; pop., 6,000. 3) River port, Queensland, Australia; pop., 26,000.

Iquique, cap. prov. of Tarapacá, Chile, on Pacific Ocean; pop., 36,600; exports salt-petre, iodine; freq. earthquakes.

I.R., abbr. Inland Revenue.

Ir, chem. symbol of Iridium.

I.R.A., abbr. Irish Republican Army.

Iran, Asiatic plateau (alt. 450 ft.), bounded N. by Caspian Sea and Lowlands of Turkestan, S. by Persian Gulf and Arabian Sea, E. by *Hindu-Kush* and *Suleiman Mtns.*, and W. by Tigris Valley. **Eastern I.**, Afghanistan and Baluchistan; **Western I.**, Persia. See **PERSIA**.

Iranian: see **LANGUAGE SURVEY**, *Indian*, *B* group.

Iraq, independent Arab kgdm., comprising Lower Mesopotamia and S. Kurdistan; bordered E. by Persia, N. by Turkey; N.W. by Syria, W. by Trans-Jordan, and S. by Arabian Desert; narrow seaboard at head of Persian Gulf; watered by Rivs. Tigris and Euphrates; under Brit. mandate until admission to League of Nations in 1932; divided into vilayets of Basra, Bagdad, and Mosul; area, 116,000 sq.m.; pop., 2,849,300 (1,494,000 Shiite Mohammedans, 1,146,700 Sunni Mohammedans). Soil, where irrigated, very fertile (cotton, dates, cereals); important oil wells; carpets and rugs; cap., *Bagdad*; other tns., Mosul, Basra (port on Persian Gulf); rly. from Basra to Bagdad. **I. Arabi**, lower Iraq; **I. Ajemi**, dist. centr. Persia.

I.R.B., abbr. Irish Republican Brotherhood.

Ire., abbr. Ireland.

Ireland, John (1879-), Eng. composer; *The Forgotten Rite*, 1913. Four Preludes for pianoforte, 1915.

Ireland, westernmost and 2nd. largest of Brit. Isles, 31,836 sq.m.; divid. polit. into *Irish Free State* and *Northern Ireland*. Great Centr. Plain, surrounded by isolated mtn. ranges: N., *Sperrin Mtns.* (2,240 ft.) in Co. Tyrone; *Derryveagh Mtns.* (2,470 ft.) in Co. Donegal; W., *Connemara Mtns.* (2,695 ft.) in Co. Galway; S.W., *Megillindy's Reeks* (Carrantuohill, 3,414 ft., highest peak in Ire.) in Co. Kerry; S., *Galtee Mtns.* (3,000 ft.) in Co. Tipperary; *Knockmealdown* (2,609 ft.) and *Comeragh Mtns.* (2,470 ft.) in Co. Waterford; S.E., *Wicklow Mtns.* (3,039 ft.) in Co. Wicklow; N.E. *Mtns. of Mourne* (2,796 ft.) in Co. Down. Many rivers (Shannon longest riv. in British Isles, 240 m.); lakes or Loughs (Lough Neagh largest in British Isles, 150

sq.m.), incl. the famous *Lakes of Killarney*; much bog and peat-land. Coast, esp. on W., is deeply indented. The extensive rainfall is said to be cause of verdure of I. ("the Green Isle of Erin.") Little forest-land; few coalfields. In S. and W. much grassland (stock-breeding); agric. in N. and E. (oats, flax, and potatoes); linen industry in Belfast; valuable fisheries; brewing and distilling. Rlys. 3,750 m.; canals, 850 miles. **Irish Free State** (I.F.S.), estab. 1922, co-equal member of Brit. Commonwealth of Nations, consists of provs. of Leinster, Munster, and Connaught, with 3 counties of Ulster, viz., Cavan, Donegal, and Monaghan; area 26,600 sq. m.; pop., 2,952,000; cap., *Dublin*. Exports to Gt. Brit.: cattle, butter, eggs. Emigration in 1927, 27,150. **Northern Ireland**, popularly known as Ulster; six N. counties of Ire. forming part of the United Kingdom; area, 5,236 sq.m.; pop., 1,256,600; cap. *Belfast*. Emigration 1926, 12,844.

HISTORY: inhabitants orig. Celtic. converted to Christianity 5th cent. (St. Patrick). 9th to 11th cents. invasions by Danes, defeated by Brian Boru at Clontarf, 1014; afterwards by Anglo-Normans. Henry II declared Lord of Ireland, 1172 (title changed to Kg. by Henry VIII). Struggles betw. natives and colonists from 12th to 17th cents., culminating in rising of 1641. Repressive measures by Cromwell, 1649. Rising in favour of James II, 1688, put down by William III. Legislative independence granted, 1782; United Irish rebellion, 1798. Legislative union with Gt. Brit. 1800; Cath. emancipation, 1829; great famine, 1846; disestablishment of Anglican Church in Ireland, 1869. Demands for Home Rule both in Parliament, and with violence by Fenians and Land League. First Home Rule bill, 1886; second, 1893; third, 1912. Threats of rebellion in Ulster interrupted by World War. Rebellion in Dublin, 1916, mainly organised by Sinn Féin (*q.v.*). Dominion self-government granted to S. Ireland, 1922. Cosgrave, President; succeeded, 1932, by De Valera, a republican and separatist.

Irenæus, St., Bp. of Lyons, Father of the Ch.; mart. c. 202; *Contra Hæreticos*, prob. c. 180.

Ireton, H. (1611-51), Eng. parliamentary gen. and regicide; Cromwell's son-in-law; a prime mover in Pride's Purge (*q.v.*); Lord Deputy in Irel. 1650; d. at Siege of Limerick.

Iridescence, sheen having delicate tints of the spectrum, e.g., floating oil, mother-of-pearl, etc., caused by interference (*q.v.*).

Iridium, (chem.) sym. Ir; at. wt. 193.1; sp.gr. 22.41; m.p. 2350°C.; hard silvery metallic element; alloy with platinum used to

tip fountain pen nibs, as compass bearings, etc. **I. black** (oxide), used as pigment in ceramics.

Irigoyen, Hipólito (1850-), Arg. statesm.; Pres. of Argentina 1916-22, 1928-30.

Iris, 1) (myth.) in Gr. legend, personification of rainbow. 2) (Bot.) Flag, *Iris pseudacorus*, aquatic plant with swordlike leaves and large yellow or purple flowers. There are many varieties of I., some cultivated. The *orris root* of the druggist and perfumer is obtd. from *I. florentina*. See ORRIS. 3) (Anat.) Coloured part of the eye (q.v.), surrounding the pupil.

Iris

Irish Free State: see IRELAND.

Irish Fusiliers, Royal, Brit. infantry regt.; union of old 87th and 89th Foot; forms one corps with Royal Inniskilling Fusiliers (q.v.); depot, Omagh (N. Ire.); record office, Leith; 14 battalions in World War.

Irish Guards, 4th regt. of Brit. Foot Gds.; formed in 1902, in appreciation of Irish regts.' service in South Afr. War. Regt. of I. G. fought for James II agst. William III, in Ireland, afterwards entering Fr. service.

PIG-IRON PRODUCTION

World pig iron production had steadily increased since 1924 so that 1929 total nearly 1½ times pre-war; but in 1930 there was a decline of about one-fifth 1929 figure. U.S.A. produces 40%-50% of total and is largest producer. Brit. Empire has failed to increase production at same rate as rest of world owing to decline in U.K. Despite smaller number of furnaces (see graph to right), increase of size has made possible increase of production

Irish Sea, sea (c. 7,000 sq.m.) separating Gt. Brit. from Ire.; connected with Atlantic on N. by North Channel (betw. S.W. Scotland and N.E. Ire.) and on S. by St. George's Channel (betw. Wales and S. Ire.). Max. length (S. Scotland to N. Wales), c. 110 m.; breadth (Morecambe Bay, Lancs, to 1½ Bay, Co. Louth) c. 150 m.; mean

depth 34 fathoms. Isle of Man in centre; Isle of Anglesey and Holyhead Isl. in south.

Irish stew, slowly cooked dish usu. made of neck of lamb or mutton, mixed with potatoes and onions.

Irish terrier, strongly built T. with rough, reddish coat.

Irish wolfhound, powerful shaggy dog, like a large deerhound (q.v.).

Irkutsk, tn., Siberian area of R.S.F.S.R.,

IRON-ORE PRODUCTION

World production of iron ore had by 1925 reached pre-war magnitude, and has since continued to increase, so that the 1930 total was about ½ greater than that for period ending 1913. U.S.A. is largest producer but, largely owing to transference of former German territory under Treaty of Versailles, production in France is approaching U.S.A. figures

on Riv. Angara; pop., 104,000; univ.; trade in hides and tea; State gold refinery. Adm. Koltchak executed, 1920.

Irlam, urb. dist., Lancs, 8 m. S.W. Manchester on Manchester Ship Canal (confluence Rivs. Irwell and Mersey); pop., 13,000.

Irmínus, anc. pillar erected to Irmín, Germanic war-god, at Eresburg (Marsberg) in Westphalia.

Iron, Ralph: see SCHREINER, OLIVE.

Iron, metallic element; sym., Fe; at. wt.,

55.84; sp.gr., 7.86; m.p., 1533°C.

Cast, or **pig I.** produced by melting ore in a blast furnace with coke and limestone; from pig I. is produced steel, wh. contains from 0.7 to 1.7% carbon. Spec. hard steels contain small quantities of cobalt, manganese, chromium, tungsten, and other rare metals. I.

very freq. prescribed in med. as a tonic, as it is a constituent of haemoglobin, the red colouring matter of the blood. **Salts of I.**, two series of salts formed by I.: ferrous (divalent) and ferric (trivalent). Ferrous salts are oxidised, when moist, by air. Ferrous sulphate, FeSO_4 , green vitriol, extensively used in the arts. Ferric chloride, FeCl_3 , used in medicine, in treatment of anaemia.

I. mould, stains on textiles produced by iron-rust or ink; may be removed by applying weak solution of salts of lemon in hot water, and immed. washing in cold water. **I. ores**, minerals containing iron; chief varieties: *magnetite* or loadstone, *haematite*, *limonite*, wh. are oxides of iron; *siderite* or spathic iron ore, a carbonate of iron; *iron pyrites*, sulphide of iron. **I. oxides**, compounds of iron and oxygen; ferrous oxide, FeO , black powder, catches fire spontaneously in air. Ferric oxide, Fe_2O_3 , red powder common mineral (and ore of iron) haematite, artif. product known as "rouge" and "Venetian red," used

as an abrasive and polishing material, as a protective paint for iron-work, also as red colouring agent for paper, rubber, and pottery. Magnetic oxide, Fe_3O_4 , mineral lodestone (q.v.), black; formed by action of steam on red-hot iron. Used as electrode material and as pigment in printing. Strongly magnetic.

Iron Age, term for prehistoric era in Eur. and W. Asia following on Bronze Age (c. 1000 B.C.). So called from fact that iron replaced bronze as metal commonly used for weapons, tools, and ornaments. Principal divns.: *Hallstatt* and *La Tène* periods (q.v.).

Ironbridge, tn., Salop, in par. of Madeley, adjoining Coalbrookdale; iron bridge (1779) across Riv. Severn; pop., 3,000.

Ironclad, 1) former name for ship of war. 2) **I. magnet**, electro-magnet with coil surrounded by iron.

Iron Cross, Pruss. milit. decoratn., inst. 1813, revived in 1870 and 1914; 2 classes; also Grand Cross, Gold Star (awarded only to Blücher and Hindenburg).

Iron crown, royal crown of Lombardy, used for imperial coronatns. from Henry VII (1312) till Napoleon I (1804); the iron fillet (covered with gold and jewels) said to be a nail from the true Cross; restored to Italy, 1866, and now preserved at Monza; see *Illus.*, CROWN.

Iron Gates, 1) defile Riv. Danube, betw. Orsova and Torno Severin. 2) Narrows, Vardar Vall., nr. Strumitza.

Iron law of wages, (econ.) theory origntd. by *Physiocratic school* (q.v.), and develpd. by Ricardo, Malthus, and Lassalle, that as wages depend on supply and demand of labourers, a

rise in wages leading to increase of labouring population will be followed by fall of wages, so that condition of working classes cannot be permanently improved under capitalist system. It was taken as axiomatic that increase of wages must be followed by increase of population, though Malthus saw the possibility of "moral restraint."

Iron Mask, Man in the, unknown polit. prisoner in the Bastille from 1698 until his death in 1703. Many theories as to his identity have been propounded.

Ironside, Edmund, see EDMUND 2).

Ironside, Sir Wm. Edmund (1880–), Brit. gen.; c.-in-c., Allied Forces, Archangel, N. Russ., 1918–19.

Ironsides, name given to Parliamentary soldiers in Eng. civil wars.

Iron wood, timber of a particularly hard kind obtained from a variety of American, African, Australian, and Asiatic trees.

Irony, subtle or covert sarcasm, the speaker conveying a meaning opposite from

Iron-Ore Production

the literal meaning and thereby expressing ridicule, contempt, or dissent.

Iroquian: see LANGUAGE SURVEY, Amer. languages.

Iroquois, group of native tribes of N. Amer., formerly very warlike; now numbering only abt. 17,000; semi-agricultural.

Irradiation, (med.) exposure to rays from a lamp, most commonly to ultra-violet light from carbon-arc or mercury-vapour lamp. Causes browning of the skin, similar to sun-tan, and leads to formation of vitamin D in the body; used in treatment of rickets. Other kinds of light rays, e.g., infra-red, are also used, but are not of proved scientific value.

Irrational, incompatible with reason.

I. numbers, (math.) those numbers wh. cannot be repr. by vulgar fractions but are expressed by incommensurable decimal fraction, e.g., $\sqrt{2} = 1.41421 \dots$ **Irrationalism**, philos. view that understanding and reason alone cannot lead to knowledge, but require the aid of emotion.

Irrawaddy, **Irawadi**, chief riv., Burma; formed by union of two streams in N.; flows past principal cities of Burma, incl. Mandalay, into wide delta (12 mouths: only Rangoon Riv. and Bassein Riv. navigable); principal artery of traffic in country; length c. 1,100 m.; navigable to Bhamo (600 m.).

Irredenta, *Italia Irredenta* ("unredeemed Italy"), polit. society indd. 1878 to promote union of all Ital-speaking territories (e.g., Trentino, Trieste) with It.; in a gen.

Iron Cross

sense, used to denote all territories politically separated from States to which race or language affiliates them.

Irregulars, *irregular troops*, forces outside the regular military establishment.

Irrigation, process by which land is supplied with water for agricultural purposes. In *basin* system, land is surrounded by banks and flooded; in *perennial* system, water, derived either from rivers or pumped from wells, is distributed by a system of canals. Water storage by building dams across rivers (e.g., Aswan and Sukkur dams) often enables vast tracts of desert country to be rendered fertile.

Irrigator, (med.) vessel from which fluid is made to flow at varying pressure through a tube. For injection and continuous washing, e.g., of surface of a wound.

Irtish, riv. (c. 2,600 m.), Russia, trib. of Riv. Ob; flows from *Altai Mts.*, near Mongolia, through W. Siberia; navig. for c. 2,000 m. to Semipalatinsk.

Irvine, royal burgh and seaport, Ayrshire, Scotland, on Firth of Clyde, at mouth Riv. Irvine (29 m.; flows past Kilmarnock); pop., 12,050; shipbuilding, brewing, chemicals.

Irving, Edward (1792-1834), Scot. divine; founder of Cath. Apostolic Church (q.v.); schoolmaster at Kirkcaldy, 1812; friend of Carlyle; minister at Hatton Garden chapel, 1822; famous as preacher; built new church at Regent Square, London; gave enthusiastic support to phenomenon of "speaking with unknown tongues"; incurred charge of heresy from tract *The Orthodoxy and Catholic Doctrine of Our Lord's Human Nature*, 1830; prosecution failed, but he was removed from his church; condemned for heresy concerning the sinlessness of Christ by Presbytery of Annan, 1833. **I., Sir Henry** (1838-1905), Brit. actor; 1st actor knighted (1895); originally named John Brodribb; buried in Westminster Abbey. **I., Washington** (1783-1859), Amer. auth., satirist, and humorist; *The Sketch Book of Geoffrey Crayon, Gent.*, 1820.

Italy, kgdm., S. Europe, comprising the centr. and smallest of the three S. European peninsulas. Projects into the N. Mediterranean, dividing it into Adriatic Sea (E.) and Ligurian and Tyrrhenian seas (W.). Separated on N.W. from France by W. Alps; on N. from Switzerland by W. and Centr. Alps, and from Austria by E. Alps; and on N.E. by a less well defined frontier from Jugoslavia. Ital. territory includes isls. of Sicily (sep. fr. mainland by Str. of Messina) and Sardinia (Tyrrhenian Sea), as well as abt. 70 smaller isls. (Elba, Pantellaria, Lipari Isls., Aegadean Isls., etc.) and the enclave of Zara on the Dalmatian coast. Area, 120,650 sq.m.; pop., 42,120,000. Coast-line fairly uniform, esp. on east. In S. the Gulf of Taranto cuts into mainland, forming penins. of Lecce (E., at the narrowest part of the Adriatic or Str. of Otranto) and Calabria (W.), respectively the "heel" and "toe" of Italy.

N. Italy comprises the basis of the Po

(longest riv.) and Adige, with innumerable tribs. flowing from the Alpine barrier: Monte Rosa (15,200 ft.), highest mtn., partly in Switzerland. From Ital. Riviera the long range of the Apennines extends E., then S.E., shutting off N. Italy from the penins. section. On the Swiss frontier is the region of the Ital. lakes (Maggiore, Como, Lugano). L. Garda, largest N. Ital. lake, is S.E. of these. The rich alluvial soil of N. Italy, sheltered from northerly winds, well watered by Alpine streams, and extensively (7,700 sq.m.) irrigated, is favourable to agriculture (two ann. crops, chf. wheat and maize). Utilisation of hydro-electric power has made the Po Valley Italy's greatest industrial region (four-fifths of all Ital. factories); manuf. include silk, artificial silk, cotton, woollens, gloves, hats, hosiery, footwear, machinery, motorcars; chf. tns.: Milan (indust. cap. of Italy), Turin, and Venice.

Centr. and S. Italy may be regarded as three distinct regions. The *Apennines*, extending for 750 m. to Str. of Messina and reappearing in Sicily, form the backbone of It.; soft limestone, much disintegrated; water scarce; largely deforested. In the W. are small parallel ranges, occasionally volcanic (only *Vesuvius* active); region given over to cattle- and sheep-breeding; fauna include foxes, wolves, bears, and wild boars. In extreme S. of Calabria climate is subtropical.

The *W. Coastal Plain*, reaching to the foot of the Apennines, has a mild and equable climate; rich volcanic soil watered by mtn. streams; chf. agric. products: oranges, lemons, olives, dates, figs, vines, pomegranates, sugar cane; unhealthy Campagna being reclaimed for cultivation; fisheries (tunny, sardine, anchovy); marble quarries at Carrara; few manufactures; flourishing hotel trade; chf. tns.: Rome (cap. of Italy), Naples, Genoa, Leghorn.

The *E. Coastal Plain*, on the Adriatic, is warm in summer but exposed in winter to N.E. winds from the Balkans; soil fertile and well watered; chf. tns. (ports) Ancona and Brindisi.

Northern Italy is divided into seven regional divisions: Piedmont, Liguria, Lombardy, Veneto (Venezia Euganea), Venezia Tridentina, Venezia Giulia (incl. Zara), and Emilia;

centr. and S. Italy into 9: Tuscany, Marches, Umbria, Latium, Abruzzi e Molise, Campania, Apulia, Basilicata, and Calabria; Sicily and Sardinia bring the total up to 18. Overseas possessions: *Eritrea*, on Red Sea coast; *Ital. Somaliland*, on Indian Ocean; *Libya* (Tripolitania and Cyrenaica), N. Africa; *Rhodes* and *Dodecanese*; see separate articles.

Cisalpine and Ligurian repubs., 1796, and crowned himself kg. of It. at Milan, 1805. Fr. dominion extended to Naples, 1808, and to Papal States, 1810. Introduction of *Code Napoléon* paved the way for Ital. unity. By Congress of Vienna, 1815, Naples incorporated with Sicily under Ferdinand I, Papal States restored to the Pope, Lombardy and Venetia to Austria, Piedmont, Sardinia, Savoy and Nice to Victor Emmanuel I, and various minor states in N. to their former Bourbon owners. Repressive policy followed by unsuccessful revolts in 1848 and 1849 (Milan, Venice, Rome; Rom. Republic headed by Mazzini). Treaty of Paris, 1856, provided that France, in return for helping Sardinia expel Austrians from It., should receive Savoy and Nice. France and Sardinia defeated Austria at Magenta and Solferino, 1859, expelling Austria from Lombardy. Garibaldi took Sicily and Naples for It. 1861, and in 1862 made abortive attack on Rome. Kgdm. of United It. (cap. Florence) 1861. It. allied with Prussia agst. Austria in Austro-Prussian war, 1866, and obtained Venetia from Austria. In 1870 Victor Emmanuel occupied Rome and completed Ital. unity. Joined Germany and Austria in Triple Alliance, 1882 (renewed 1891 and 1902). Establd. protectorate in Abyssinia and founded colony of Eritrea, 1890; war with Turkey, 1911, and annexation

of Tripolitania and Cyrenaica. Joined Triple Entente, 1915, and at Peace of Versailles, 1919, obtained S. Tyrol as far as Brenner Pass, Trieste, Istria, Dalmatian, and Fiume. Fascist *coup d'état* ended dictatorship under Mussolini in 1922 (March on Rome). Concordat with Vatican 1929.

Lippmann, Gabriel (1845-1921), Fr. physicist; Nobel Prize (Physics), 1912; conducted researches in colour-photography; invented a capillary electrometer, an astatic galvanometer, a collostast, etc.; elected F.R.S., 1908; pres. of Paris Acad. of Science, 1912.

Lipton, Sir Thomas (1850-1931), Brit. merchant and sportsman; frequent challenger (1899-1930) for the America's Cup with yachts "Shamrock."

Liquation, in metallurgy, seprtn. of 2 metals with diff. m.p. by a careful fusion of more easily melted components of the alloy in a *L. furnace*.

Liquefaction of gases, (phys.) effected by pressure and reduc. of temp. only poss. below critical temperature (*q.v.*). **L. of air:** see *LIQUID AIR*.

Liqueur, highly alcoholic beverage, sweetened and flavoured with herbs, etc. Gen. used in small quantities as an after-dinner cordial.

Liquid, body which exerts no permanent

or elastic resistance to forces, however small, tending to change its shape, but possessing cohesion between its particles. *L.* comes to rest in vessel of any shape with horizontal free surface or surfaces; hence level of liquid in tubes or vessels with communication below liquid surface is everywhere same; surface behaves as if covered with stretched elastic membrane, result of attraction of particles for one another (see *SURFACE TENSION*). All liquids when cooled sufficiently become solid, usually they freeze at definite temp. forming crystals, but sometimes become solid gradually (e.g., glass). All boil when heated sufficiently, i.e., when their vapour pressure becomes equal to that of atmosphere. No substance can exist as liquid above its critical temp. (*q.v.*). Most liquids are "isotropic", i.e., have like properties in all directions, but crystalline liquids or liquid crystals are known wh. have optical characteristics of crystals.

Liquid air, (phys.) air liquefies at critical temp. of -140° C, and critical pressure of 39 atmospheres. Manuf. (Linde's method):

air compressed at 200 atmospheres is allowed to expand in counter-current cooler where by it is cooled and liquefied. Liquid air can be kept only in *Dewar Flasks* (*q.v.*), open, double-walled vessels with exhausted space betw. the walls. Used in blasting, when containers of cardboard filled with coal dust saturated with liq. air are caused to explode by a suitable detonator. Also used in mining operations, clearing work, etc.

Liquidambar, sweet gum, deciduous tree ind. in Amer. and Asia Minor, producing fragrant gum used as perfume; wood used for veneering.

Liquidation, (finan.) winding-up of an enterprise and realization of assets to be distribtd. among creditors and shareholders. *L.* may be *voluntary*, i.e., freely decidd. by firm in ques., or *involuntary*, i.e., compelled by court of law. See *BANKRUPTCY*.

Liquid fire: see *GREEK FIRE*.

Liquids, (phon.) liquid or flowing sounds: *l, r*, sometimes *m, n*.

Liquorice, Span. sweetwood, dried rhizome and roots of *Glycyrrhizaglabra*; plant growing widely in S. Eur. and cultivd. in

List, Friedr. (1789-1846), Ger. pol. econ.; *The Nat. System of Polit. Economy*.

Lister, Joseph Lister, 1st bn. (1827-1912), Eng. surgeon; 1st to use antiseptics in med. practice, 1865.

Liszt, Franz (1811-86), Hung. pianist and composer; championed Wagner (*q.v.*); joined Franciscan order, 1865; *Hungarian Rhapsodies*; *Dante and Faust* symphonies; *Die Heilige Elisabeth*.

Li Tai Po (701-762), Chin. lyric poet; *Ku T'ang Shih Ho Ch'ieh*.

Litany, (eccles.) earnest prayer and supplication recited by priest, with recurring response repeated by congregation.

Litchi, lée chee, Chinese tree bearing round pulpy fruit enclosed in thin shell.

Literae humaniores, (Lat.) abbr. *lit. hum.*; final honours exam. in classics and philosophy at Oxford University; familiarly called "Greats."

Litera scripta manet (Lat.), the written letter remains; *i.e.*, the written word is more durable than the spoken word.

Litharge, lead oxide (PbO). *See* LEAD.

Lithium, chem. element; sym. Li, at. wt., 6.940; sp. gr. 0.53; m.p. 179°C; soft, white alkali metal; L. carbonate and chloride occur in certain artific. min. waters; formerly supposed to be a specific for gout.

Lithography, printing process inv. by Alois Senefelder, 1796; design to be produced is drawn or transferred to the stone or to a metal plate in a special greasy ink; treatment with acid hardens the ink and very slightly etches the rest of the stone or plate. In printing, the surface is kept moist with water which is absorbed by the blank parts and

repelled by the lines of the design, while the ink is repelled by the blank parts but adheres to the design. **Chromolithography**, same process used for colour printing; a separate stone or plate used for each colour. In **Photolithography**, the design is transferred to stone or plate photographically. **Offset l.**, design transferred to zinc or aluminium plate which is curved to fit the cylinder of a press having two other cylinders (besides inking and damping rollers), one of wh. is covered with a rubber blanket which receives the impression on its surface, to transfer it again to the paper which is fed on to the third cylinder; possible by this method to print on very rough paper. Tin-plate printing effected in much the same way.

Lithopone, white pigment, mixture of barium sulphate and zinc sulphide; non-poisonous and, if pure, does not turn black.

Lithosphere, solid part of the earth as distinct from the two envelopes of water and gas (hydrosphere and atmosphere); div. into *outer crust and nucleus*.

Lithotomy, (surg.) operation of cutting the bladder, usu. for removal of a stone or stones. **Lithotrity**, operation for crushing a stone in the bladder.

Lithuania, Lietuva, southernmost of the Baltic repubs. succeeding to the Russ. Baltic Provs.; bounded N. by Latvia, E. by Poland, S. by Poland and E. Prussia, and W. by the Baltic. Area, c. 21,000 sq.m.; pop., 3,500,000. Coast-line only 12 m. long with autonomous terr. of Memel (*q.v.*). Interior forest and marshland watered by rivs. Memel (Niemen) and Viliya; cereals, flax, potatoes, cattle; rlys., 1,250 m.; cap., *Kaunas* (Kovno). Polish boundary still unsettled; large area, incl. Vilná (*Wilno*), L's prospective cap., disputed. Const.: *President* (7 yrs.) elected by Diet of 112 members. Hist.: Indept. grand duchy under Gedimin, 317; allied to Poland through marriage of Jagiello to Polish Queen Hedvig, 1382; Russian, 1795-1917; peace with Russia, 1920; with Allies, 1922. Seizure by Poles of Vilna in 1920 followed by Lithuanian annexation of Memel in 1923.

Lithuanian Language: *see* LANGUAGE SURVEY, *Baltic Languages*.

Lit. Hum., abbr. *literae humaniores* (Lat.), classics.

Litmus, organic chem. dye from var. lichens; used chemically as indicator (*q.v.*); turns blue with alkalis and red with acids; used either in solution or as strips of paper wh. have been soaked in the dye.

Litre, 1.75999 pints; the volume of 1 kilo. of pure water at its maximum density (at 4°C) and under standard atmospheric pressure (760 mm.). It is equivalent to 1.000027 cu. decimetres, or 61.025 cu. in.

Forms of Log

a base b is the exponent (g.c.) to which b must be raised to give n , thus if $b = 10$ and $n = 1,000$, the log. is 3, because $10^3 = 1,000$. In common logs. (invented by Napier and Briggs in 17th cent.) the basic no. is 10. The log. of 10 is 1, and of 100 2, therefore log. of any no. betw. 10 and 100 is betw. 1 and 2, the log. of 75 being nearly 1.87506, and here the fig. 1 (the integral part) is termed the *characteristic*, and the decimal the *mantissa*. The processes of multiplying, dividing, and raising to a higher power are reduced to addition and subtraction by means of logarithms. The log. of a product equals the sum of the logs. of the factors, thus $\log. (c \cdot b) = \log. c + \log. b$; the log. of a quotient equals log. of dividend minus log. of divisor, as $\log. \frac{c}{b} = \log. c - \log. b$; other formulae are $\log. a^n = n \log. a$, and $\log. \sqrt[n]{c} = \frac{1}{n} \log. c$. *Natural or Napierian Logs.* take 2.718 . . . as the base. Logs. are grouped in tables up to a given power.

Lumen, unit of light flux; flow of light into unit solid angle from a standard candle, i.e., $\frac{1}{4\pi}$ of total light emission, or light recd. by unit area of sphere of unit radius drawn around candle as centre.

Lumière, **Auguste** (1862-), and his bro. **Louis** (1864-), Fr. photo-chemists; made important developments in cinema and colour photography.

Luminescence, (phys.) gen. term for emission of visible light otherwise than as a result of high temp. Commonest is *photo-L.*, in wh. exposure to light causes a body to emit light of a characteristic colour. There are 2 kinds, *fluorescence* and *phosphorescence*. In *fluorescence*, body radiates a light of longer wavelength than the exciting light, and only so long as the latter is acting. Ultra-violet light thus excites visible fluorescent light, a fact made use of in practical work. Uranium glass is strongly fluorescent; the green discharge tubes used for advertising are made of it. Common paraffin oil fluoresces, in daylight, a violet-brown. X-rays also excite fluorescence; for instance, in barium platino-cyanide, which is used for making screens for direct observation by X rays. *Phosphorescence* continues for a greater or less time after exposure to light; luminous paint (not that containing radium) is an example. *Thermoluminescence* occurs in some solids when gently heated; *triboluminescence*, in crystals, e.g., cane sugar, when broken; *crystallo-L.*, during crystallization; *chemi-L.* in chem. action, e.g., the slow oxidation of yellow phosphorus by air. Cathode rays excite brilliant L. in many minerals. Certain organisms (esp. marine) are luminescent.

Luminous organisms, animals and plants (fungi) producing phosphorescent light in their life process: deep-sea fauna, insects (glow-worms), noctiluca, and bacteria (found on dried smoked fish, decomposing animals, etc.); see PHOSPHORESCENCE. **L. signals**, signs for transmitting messages, or warnings, used for ships, aeroplanes (lanterns showing position), railways, roads, etc.

Many times confirmed.

Magna est veritas et praevalēbit (Lat.), truth is great and will prevail.

Magnalium, aluminium with 3%-25% magnesium; light metal of great strength and durability for bldg. aircraft, light motors, scient. instruments.

Magnesia, 1) penins., E. Thessaly, Greece, betw. Gulf of Volo and Aegean; contains Mt. Pelion. 2) Anc. city, Asia Minor, now *Manisa*, Turk. tn., 20 m. N.E. of Smyrna, cap. vilayet same name (5,536 sq.m., pop., 372,560); cotton mills; pop., 28,650. 3) Ancient city, Asia Minor, on Riv. Maeander, where Themistocles died.

Magnesia, or **burnt magnesia**, magnesium oxide, MgO; light, white powder used in med. as antacid and mixed with magnesium chloride for making crucibles.

Magnesian (or **dolomitic**) **limestone**, Limestone containing magnesium carbonate.

Magnesite, (min.) vitreous, white to brown rock, consisting of magnesium carbonate, found in parts of Europe and Amer.; used in manuf. of magnesia, Epsom salts, paint and fire-bricks.

Magnesium, chem. element, sym. Mg; at. wt. 24.32; silver-white metal, m.p. 650°; sp. gr. 1.5; found only in combination as carbonate (magnesite), sulphate (kieserite), etc. Burns with brilliant light; used in fire-works and photog.; alloy contg. 75% M. used in small aeroplane parts. **M. sulphate**,

M_2SO_4 (white crystals), a useful purge (Epsom salts); **M. carbonate**, M_2CO_3 , a light white powder, used as dentifrice and for indigestion. Finely powdered soapstone (q.v.) is talcum (**M. silicate**) used in many arts and as a toilet requisite.

Magnet, a body exerting and reacting to magnetic force (see MAGNETISM). **Lifting m.** (see Ill.), an electro-magnet wh. lifts its load when supplied with elec. current, and releases load when current is cut off.

Magnetic field, any space where magnetic force is present; its direc. can be determnd. by means of iron filings and thr. deflection of *M. needle*. It is mapped by means of *lines of force* (q.v.). **M. poles**: see MAGNETISM.

Magnetism, force prod. in space by electr. in motion. Familiar is M. of iron and steel, every particle of wh. is made into a small magnet by electrons (q.v.) circling perpetually around it. A *magnet* (q.v.) is a bar of steel (best tungsten or cobalt steel) in wh. all the particles have been set so as to reinforce one another's effect; ends of bar are called the poles; when the M. is freely suspended it sets itself along the lines of force (q.v.) of earth's magnetic field. Magnetism appears to be concentrated in the poles, wh. are called North and South; *unlike* poles attract, *like* poles repel, one another. Iron and other bodies are magnetised when placed in a magnetic field. An **electro-magnet** consists of a magnetising coil of copper wire carrying an electric current, and a core of iron which is thereby "magnetised," its particles being turned round so as to add their own magnetism to that produced by the current. **Animal m.**, an old name for hypnotism (q.v.), based on a false idea of its nature.

Magnetite, **loadstone**, mineral containing up to 72% magnetic oxide of iron.

Magneto, device for generating electric current, similar to dynamo (q.v.) but having permanent field magnets. Used on motorcar and other internal-combustion engines to generate current for ignition (q.v.).

Magnetogorsk, tn., S. of Verkhni Uralsk, Urals, Russia, built 1929; pop., 180,000. Planned for productn. of 62% pure magnetic iron ore.

Magnetometer, apparatus for measuring strength of magnetic field, consisting of one

or more bar magnets delicately suspended and with mirror or pointer for reading deflection.

Magnificat (N.T.), the Virgin's song of praise, "My soul doth magnify the Lord" (Luke i); a canticle (*q.v.*) in Eng. Bk. of Common Prayer and in Vesper service of R.C. Church.

Materials, Testing of, (tech.) examination of material such as iron, steel, bldg. materials, fabrics, lubricants, etc. Special machines used of most var. description. In Eng., National Physical Laboratory, Teddington, undertakes tests.

Mathematical induction, method of reasoning first introduced by Pierre de Fermat, which states that if a proposition be true of value n when n is given a few values (1, 2, 3, etc.) and is also true of $(n+1)$, it is therefore true of all values of n . Thus the proposition of Binomial Theorem that

$$(a+b)^n = a^n + na^{n-1}b + \frac{n(n-1)}{2}a^{n-2}b^2 + \dots + nab^{n-1} + b^n$$

is proved by showing first that it is true for values 1, 2 and 3 of n and secondly by showing that $(a+b)^{n+1} = a^{n+1} + (n+1)a^n b + \frac{(n+1)n}{2}a^{n-1}b^2 + \dots + (n+1)ab^{n+1}$.

Mathematical signs: + plus (addition sign; also sign of positive nos.); - minus

Mater Dolorosa

(sign denoting subtraction, negative nos., and reciprocals, e.g., x^{-3} $\frac{1}{x^3}$); \pm plus or minus; \times ,

() (), times (multiplication sign — e.g., ab or $a \times b$ or $(a)(b)$ equal a multiplied by b); \div ; $/$, \perp and \div — divided by (division sign — e.g., $a \div b$, a / b , $a \perp b$ or more shortly

$\frac{a}{b}$ all equal a divided by b (in geom. \perp means perpendicular to); $=$, equal; \equiv , identically the same; $:$, divided by, and $::$ equals (used only between ratios — as $a:b :: c:d$ — a divided by b equals c divid. by d); \neq not equal to; $>$ greater than . . . ; \nless does not exceed . . . ; $<$ less than . . . ; \nless not less than . . . ; \sim difference between (used in cases where uncertain which quantity the greater) and sometimes for similarity; ∞ infinite; \propto proportional to; (\cong congruent); \parallel parallel; \angle angle; lg. or log. . . logarithm; $\sqrt{}$. . . or $\sqrt[n]{}$, $\sqrt[2]{}$ and, 3rd and 4th roots — called radical sign; index (-1) applied to trig. operator denoting inverse operation, e.g., $\tan^{-1} x$ denotes angle whose tan. is x ; $f()$ function of . . . — when several different fns. are in use other symbols (e.g., ϕ , Ψ , or χ) may be utilised; Σ (sigma) sum of; \int integral sign; d differential of — as dx ; δ variation of or change of as δx ; D_x or $\frac{d}{dx}$ differentiation with respect to x ; (Δ finite difference of, in geom. refers to triangle); Π product of . . . ; $!$ or \angle . . . factorial (thus $3!$ or \angle^3 equals $1.2.3$).

Mathematics (Gr.), science concerned, in narrower sense, with properties of, and relations between, quantities, but in wider sense with deductions from general premises of all reasoning. Embraces both *Pure* and *Applied M.* Former includes arithmetic (q.v.), algebra (q.v.), theories of numbers and of probabilities; analysis of real quantities (involving infinitesimal calculus), theory of functions, as well as pure, co-ordinate, and differential geometry. Mathematics is a necessary foundation of exact science (astronomy, mechanics, geodesy, physics), whose laws are relations betw. measured magnitudes (time, length, volume, etc.). For use in such connections the term *Applied M.* is common. Beginnings of a mathematical system necessary for daily life were made by the Chinese, Hindus, Babylonians and Egyptians, and developed to a science by the Greeks, esp. Euclid (from whom was named the usual Euclidean geometry), Apollonius, Archimedes, Diophantus. Gr. and Ind. mathematics taken over by the Arabs, through whose translations they became known to the W. countries even before the Renaissance. Great mathematicians of the ensuing peri-

ods: Newton, Leibnitz, Euler, Lagrange, Gauss, Cauchy, Jacobi, Descartes, Napier, Riemann, and Weierstrass.

Mather, Cotton (1663-1728), Amer. Congreg. clergyman, auth. and schol.; believer in witchcraft, and persecutor of witches.

Matico, dried leaves of a S. Amer. variety of pepper, used in medicine as a styptic.

Matilda, 1) (1102-67), Empress; dau. of Hy. I and mother (by 2nd husb., Geoffrey Plantagenet) of Hy. II of Eng.; m. 1114, Emp. Hy. V (d. 1125); attempted to succeed her father, 1135, as Qn. of Eng., but was not recognised as such; after civil war with Stephen fled to Normandy, 1148. 2) Margravine of Tuscany (1046-1115), fought for Papal rights in question of Investitures for 30 yrs., and presented her estates to Holy See, forming a large part of papal dominions.

Matinée, dramatic or musical entertainment in early afternoon.

Matins: see HOURS, CANONICAL.

Matisse, Henri (1869-), Fr. painter, member of *les fauves* group; strongly individual style, but with gt. influence on mod. Fr. painting.

Matlock, urban dist. and watering-place, Derbysh., Eng.; pop., 10,500. Includes *Matlock Bath* and *Matlock Bridge*.

Matopopo Hills, range, S. Rhodesia, 30 m. S. of Bulawayo, surrounding Matabele tableland; watershed betw. rivs. Zambezi and Limpopo; Cecil Rhodes buried at World's View.

Matrarchy, primitive dominance of the mother in affairs of household, and of women in life of the tribe. Postulated by certain sociologists; found to-day only in modified form. Ant.: *patriarchy* (q.v.). Cf. also MATRILINY.

Matriculation, 1) act on ceremony of admittance to membership of a university; 2) exam. qualifying candidate for such admittance; esp. London M., for wh. exemption may be obtnd. by reaching necessary standard in certain other examinations (e.g., School Certificate).

Matriliny, custom of counting descent, succession and kinship thr. the mother. Ant.: *Patriline*, descent thr. the father.

Matrix, place in wh. a thing is formed or developed. 1) (Typog.) Mould from wh. type is cast; in stereotyping, mould made from type, consisting of paper, plaster of Paris, etc. 2) (Machinery) Stamp for punching or printing. 3) Stamp used to impress gramophone records. 4) Earthy substance, rock, etc., in wh. minerals or gems are embedded.

Matsys, Quentin: see MASSYS, QUENTIN.

Matte, (min.) first impure product of smelting ores, particularly copper.

Matteotti, Giacomo (1885-1924), secy. Ital. Soc. Party; murdered. Death generally ascribed to Fascist gang. **M. Fund**, internatl. fund for aid of victims of Fascism, administ. by Soc. Internat'l.

Matter, (phys.) any chemical element (q.v.) or compound or mixture of such; see ATOM.

Matterhorn, **Monte Cervino**, peak of Valais Alps on Ital.-Swiss border, 14,770 ft.; first climbed by Whymper (1865).

Matthew, (N.T.) known as Levi, son of Alphaeus, apostle and evangelist, a publican until called by Jesus (Matt. ix. 9); emblem, angel; feast day Sept. 21. **Gospel of St. M.**,

Summit of the Matterhorn

1st bk. of N.T. c. A.D. 67, intended for Jewish readers, emphasising fulfilment of O.T. prophecies.

Matthews, (James) Brander (1852-1929), Amer. dramatic critic and essayist; long associated as critic with *New York Times*; auth. *Shakespeare as a Playwright*, 1913.

Matthias, (N.T.) apostle appointed in place of Judas Iscariot (q.v.), (Acts i); feast day Feb. 24th.

Matthias I., **Corvinus** or **Hunyadi** (1443-90), Kg. of Hung., 1458, Kg. of Bohemia, 1469; deftd. Fredk. III, and annexed Austria, 1485.

Mattock, (agric.) implement with sharp iron head for cutting where vegetation prevents use of spade.

Matto Grosso, State, S.W. Brazil; c. 540,500 sq.m.; pop., 340,000; steppe plateau watered by Riv. Paraguay; cattle-breeding, mining; cap., *Cuyabá*.

Maturity, (finan.) time for pymt. of a bill of exch., e.g., 3 months after date.

Matzoth: see MAZOTH.

Maubeuge, fortress tn., dépt. Nord, France, on Riv. Sambre; pop., 23,400; iron-foundries. Fortress (orig. by Vauban) captured by Ger., 1914; retaken by Brit., 1918.

Maude, Sir Frederick Stanley (1864-1917), Brit. gen. com. 13th Div., Dardanelles and Mesopotamia (1915-16); army com. in

Mesopot., 1916; occupied Bagdad, and d. there of cholera, 1917.

Maudsley, Henry (1885-1918), Eng. physiologist; endowed the M. hospital, built by the L.C.C. at Denmark Hill, London, for treatment of curable insanity.

Maugham, William Somerset (1874-), Brit. playwright and novelist; plays: *The Land of Promise*; *East of Suez*; *The Sacred Flame*; novels: *The Casuarina Tree*; *The Moon and Sixpence*; *Of Human Bondage*.

Mauna Kea, extinct volcano (13,823 ft.), Hawaii. **Mauna Loa**, active volcano, Hawaii (13,765 ft.); crater of Kilauea (q.v.) on E. slope.

Maud, 1) Ind. (Bengal) dry meas., i.24 bushel (45.2 litres). 2) Ind., Pers., and Turk. wt., 82.14 lb. (37.26 kilograms).

Maundy Thursday, Thursday before Easter. **Maundy money**, alms distribtd. to the poor as part of ceremony of washing the feet of 12 poor persons on M. T.; practised from early Christn. times, and by the kgs. of Eng., the last to do so being James II. Now restricted to giving of *M. pennies* at Westminster Abbey; coins (first struck temp. Charles II) are silver and consist of groat (4d.), twopenny-piece, and penny.

Maunoury, Michel Joseph (1847-1923), Fr. gen.; served in Franco-Pruss. War; prof. at St. Cyr, 1883-1912; conducted brilliant attack on left flank of Ger. V Army, Aug., 1914; placed in command of new VI Army on the Somme; severely wounded 15 Mar., 1915; posthumously created Marshal of France.

St. Matthew the Evangelist

Maupassant, Guy de (1850-93), Fr. novel. and short-story writer: novel, *Bel-Ami*, 1885.

Maupeituis, Pierre Louis Moreau de (1698-1759), Fr. mathematician and astronomer; *Essai de Cosmologie*, 1750.

Maura, Antonio (1853-1925), Span. statesm.; Pr. Min., 1903, 1918, 1919, 1921; constitutionalist and reformer.

Mauriac, François (1885-), Fr. novelist; *Le Baiser au Léprieux*.

Maurice, Sir Frederick Barton (1871-), Brit. gen.; served in Tirah campaign, 1897-98; S. Africa, 1899-1900; dir. of milit.

operations at War Office, 1915-18; protested agnst. attempt to shift responsibility of spring disasters, 1918, on to army; princ. of Working Men's College, St. Pancras, since 1922; succeeded Lord Jellicoe as pres. of Brit. Legion (q.v.), 1932.

Maurice, r Elector of Saxony (1521-53), leader of Lutheran party; seized office of elector from John Fredk. in alliance with Emp. Ch. V, 1547. 2) of Nassau, Pr. of Orange (1567-1623), Stadtholder of Holland and Zeeland, 1584; allied with Oldebarneveldt to overthrow Span. dominion. 3) Marshal of Saxony (1696-1750), Marshal of Fr.; deftd. Eng. at Fontenoy, 1745; 4) Landgrave of Hesse (1792-1827), patron of letters.

Maurists, offshoot of Benedictines (q.v.) founded by St. Maur (d. 565) in lifetime of St. Benedict; in northern Eur. ranked as equal with Benedictine order proper; most French Benedictine monasteries, except the Cluniacs, allied themselves to famous French Maurist congregation founded c. 1621.

Mauritania, 1) Anc. Rom. province, N. African coast. 2) Fr. colony in S.W. Sahara, c. 340,000 sq.m. (mostly desert); pop. c. 323,000 (Moorish Mohams.), with 350 Europeans.

Mauritius, formerly *Île-de-France*, volcanic island, Indian Ocean, 550 m. E. of Madagascar, Brit. crown colony since 1810; 720 sq.m.; pop., 393,400. Climate trop.; periodic cyclones; exports: Mauritius hemp (aloe fibre), coconut oil, copra, guano, sugar; cap., *Port Louis*. Dependencies are *Rodrigues*, 350 m. E. (40 sq.m., pop.; 6,600), *Chagos Archipelago*, in centr. Indian Ocean, (150 sq.m.; pop., 1,300).

Maurolis, André (1885-), Fr. author and biographer: *Silence of Colonel Bramble*; *Ariel*; *Disraeli*.

Maurras, Charles (1868-), Fr. author, and Royalist politic.; writings in *L'Action Française*; *Quand les Français ne s'aimaient pas*, 1916.

Mausier, small-arms of Ger. manuf. used in various types in many armies; Ger., Span., Turk., Boer, etc.

Mausoleum, magnifict. tomb or stately sepulchral monument; orig. tomb built for Kg. Mausolus by Artemisia at Halicarnassus (4th cent. B.C.).

Mauvaise honte (Fr.), false modesty, shyness.

Mauvais sujet (Fr.), rogue, ne'er-do-well.

Mawson, Sir Douglas (1882-), Brit. explorer; on scientific staff of Shackleton's Antarctic expeditn., 1907; led Australasian Antarctic expeditn., 1911-14; prof. of geology and mineralogy, Adelaide Univ., since 1920.

Max, Adolphe (1869-), Belg. politician; burgomaster of Brussels, 1909; resisted demands of Ger. mil. gov. and imprisoned, 1914-18.

Maxentius, Rom. emp. 306-312; deftd. by Constantine at Saxa Rubra on the Tiber, 312; drowned.

Maxim, Sir Hiram (1840-1906), Amer. inv.; Maxim automatic gun. 2) His bro. **Hudson M.** (1853-1927), inv. various gun-powders much used in World War. 3) **M., Hiram Percy** (1869-), s. of Sir Hiram; inv. the Maxim silencer for firearms. See MACHINE GUN.

Maximilianus, Marcus Aurelius (286-305), Emperor jointly with Diocletian.

Maximilian, emperors of Holy Rom. Emp.: 1) **M. I** (1459-1550), emp., 1493; reformed administration, diet, and army. 2) **M. II** (1527-76), emp., 1564; granted liberty to Lutheran nobles and knights.

Maximilian, Ferdinand Emp. of Mexico (1832-67), s. of Archd. Francis Chas. of Austria, and bro. of Emp. Francis Joseph; emp. (by invitn.), 1864; shot by revolutionaries.

Emp. Maximilian I after Dürer

Maximilian I, Joseph (1756-1825), Kg. of Bavaria, member of Rhine Union; granted liberal constitution, 1818.

Maximilian I, (1573-1651) the Great Elector and Duke of Bavaria; leader of Catholic League in Thirty Years' War.

Maximilian, Pr. of Baden (1867-1929), "Pr. Max"; Ger. statesman; last Chanc. of Empire; announced abdic. of William II, 1918, and surrend. chancellorship to Ebert, 1st Pres. of Repub.; *Memoirs and Documents*.

Maximinus, Gaius Julius Verus, Rom. emp., 235-38; Thracian shepherd, remarkable for his size and strength; proclaimed emp. by soldiers on the Rhine after murder of Alexander Severus; organised frontiers and built roads; his severity caused revolt and led to his murder, 238.

Maxton, James (1885-), Brit. Soc. politician; ex-schoolmaster; imprisoned for pacifist speeches, 1916; M.P. since 1922; organiser in Scotl. for Glasgow federation of Indep. Lab. Party, 1919-22; chmn. of I.L.P., since 1926.

Maxwell, James Clerk (1831-79), Eng. physicist, combined all known properties of elect. into *M.'s equations*, from wh. he deduced existence of *electro-magnetic radiation*, travelling with velocity of light. Suggested that light is elec.-magn. radiation, since proved; long-wave elec.-magn. radiation demonstr. by Hertz, and now used in wireless telegraphy. **M., Wm. Babington** (1876-), Brit. author; chmn. of National Book Council; *The Guarded Flame*, 1906; *We Forget because We Must*, 1928; etc.

May, Phil (1864-1903), Brit. humorous artist and caricaturist; contributed to *Punch*.

May, 5th month, of 31 days, named after Rom. deity Maia, "she who brings increase." **M.-Day**, first of May, observed as spring festival by anc. Romans; formerly celebrated in Eng. with rustic games, dancing round Maypole, etc.; selected as Labour Day (*q.v.*) by Internat. Socialist Congr., 1889. **M.-flies**, delicate winged insects; remarkable for very short life after emergence from aquatic larvae.

Maya, 1) anc. race of Centr. Amer. Inds.; formerly dominant thr. whole of Centr.

Amer.; own language. First highly developed culture in Centr. Amer.; had hieroglyphic script and calendar; elab. archit.; relig. animistic. 2) In Hind. myth., personification of illusion. **M.'s Veil**, external life (illusory), veiling the true (ideal) life.

Chichen Itza: Building ornamented
with Masks of the Rain God, about
10th cent. A.D.

Mayakovsky, Vladimir (1894-1931), Russ. lyric poet and dramatist.

Mayer, Robert (1814-78), Ger. physicist; propounded laws of *conservation of energy* (*q.v.*) and *mechanical equivalent of heat*.

Mayfair, London aristoc. quarter betw. Bond Street and Hyde Park; from fair instit. by Edward III in neighbourhood of Curzon Street.

Mayflower, the ship that brought 1st Eng. colonists (Pilgrim Fathers) to Massachusetts in 1620.

Maynooth, tn., co. Kildare, I.F.S., 15 m. W. of Dublin; pop., 900; Royal Catholic college (1795).

Mayo, Wm. James (1861-), Amer. surgeon; **M., Ch. Horace** (1865-), surgeon; bro. of Wm. James; with their father fndd. **M. Clinic**, Rochester, U.S.A., 1889.

Mayo, marit. co., Munster, I.F.S.; area, 2,084 sq.m.; pop., 172,700; coast deeply indented, with *Achill Is.* (largest off Ir. coast); mountainous in W., level in E.; *Lough Conn* (8 m. by 4); stock-raising, fisheries; co. tn., *Castlebar*.

Mayonnaise, salad dressing made with olive oil, yolks of eggs, vinegar, salt, and pepper.

Mayor, chief personage in a borough,

where he presides over town council and borough magistrates, and enjoys precedence over all pers. exc. royal family or official representative. **M. of the palace**, chief court official of Frankish kgs.; under later Merovingians became virt. ruler and ultimately ousted king.

Maypole, pole hung with ribbons and flowers round wh. dances took place on May Day. **Mayweed**, European and Asiatic wild plant, with large, daisy-like flowers.

Mazagan, El Jadida, fortified seap. tn. on W. Coast of Morocco; pop., 20,000 (1,700 Europeans).

Mazanderan, prov., Persia, on coast of Caspian Sea; c. 11,000 sq.m.; cattle and silkworm breeding; pop., c. 199,000

Mazarin, Jules (1602-61), Fr. card. and statesman; succ. Richelieu as Min., 1642; establ. Crown as supreme power in France.

Mazeppa-Koledinsky, Ivan Stepanovich (c. 1644-1709), Cossack hetman, Pr. of Ukraine, in service of Peter the Great; later allied with Charles XII of Swed., in attempt to make Ukraine independent.

Mazoth, motzas, unleavened bread, used by Jews in substitution for leavened bread during week of Passover (Exod. xii, 14).

Mazurka, Polish nat. dance in 3 time; early M. tunes characterised by monotonous bass and accent on 3rd beat.

Mazzini, Giuseppe (1805-72), Ital. patriot and revolutionary; apostle of Ital. unity and independence.

M.B., abbr. *Medicinae Baccalaureatus* (Lat.), Bachelor of Medicine.

M.D., abbr. *Medicinae Doctor* (Lat.), Doctor of Medicine.

Md., abbr. Maryland.

Mddx., abbr. Middlesex.

Me., abbr. Maine.

Mea culpa (Lat.), through my fault; part of the formula used by penitents at Confession in the Cath. Church.

Mead, beverage made from honey and spices dissolved in boiling water, fermented with malt and yeast.

Meadow-brown butterfly, species common in pasture lands in temperate regions brown with black eye-like spots.

Meadow grass, general name for any of the many varieties of *Poa*. **M. rue**, perennial, wild plant of buttercup family with small yellow clustered flowers. **M. saffron**: see COLCHICUM. **M. sweet, queen-of-the meadow, bridewort, Spiraea ulmaria**, herbaceous plant 2-4 ft. high, pinnate leaves yellowish white flowers; very sweet smelling. Used to flavour herb beers and also in her med. for infantile diarrhoea.

Meadow-brown
Butterfly

Meal-worm, larva of a small beetle breeding in flour-mill refuse.

Mean, (arithmet.) average of the numerical values of items such as $a, b, c \dots$ etc., is their sum divided by the number of items:

$\frac{a+b+c+\dots}{\text{no. of items}}$. **Geometric M.** of two numbers a and b is the square root of their product: $\sqrt{a \times b}$. **Harmonic M. (H)** is quantity whose reciprocal is arith. M. of reciprocals of other quantities, e.g., $\frac{1}{H} = \frac{1}{2} \left(\frac{1}{a} + \frac{1}{b} \right)$.

Means Test, enquiry by local public assistance committees as to financial circumstances of families and relatives of unemployed persons in Gt. Brit. (since 1931); upon the amount of income so disclosed committee decides whether relief shall be paid.

Mearns, The: see KINCARDINESHIRE.

Measles, contagious disease wh. chfly. attacks children. Incubation period, 7-21 days. Begins with running of eyes and nose, high temperature. Rash appears on 4th day. **Preventive measures**: Injection of serum from convalescent patients; this must be given within 5 days of exposure to infection.

Meat, soft part of animal; muscular tissue. Food value consists of albumen and min. salts content. M. is composed on average of $\frac{3}{4}$ water, $\frac{1}{4}$ solid matter, of wh. 80% albumen and 3%-7 $\frac{1}{2}$ % min. salts (sodium chloride, potassium, calcium, and magnesium phosphate). Food value also depends on mode of prep. If meat is placed in

cold oven or water, salt content and some of albumen is extracted; placing in boiling water or hot oven causes outer layer of albumens to be sealed and prevents loss of nourishing substances. Princ. joints (see diag. above) are: A) Beef: 1. Head and neck. 2. Shoulder. 3. Chuck rib (rib). 4. Middle-ribs. 5. Sirloin. 6 and 7. Rump and aitch-bone. 8 and 9. Buttock and flank. 10. Brisket. 11. Leg. 12. Dewlap clod. 13. Shin. At back of 3 and 6, fillet. B) Veal:

1. Head with brain, tongue, and neck. 1a. Sweetbread. 2. Neck. 3. Neck. 4. Loin; kidneys. 5. Loin (chump). 6. Knuckle. 7. Foot and hock. 8 and 9. Breast and lights, heart, lung, liver, etc. 9. Shoulder. 10. Breast. C) Pork: 1. Head, ears, and snout. 2. Spare rib. 3. Loin. 4. Loin with kidneys. 5. Leg. 6. Spring or belly (lean); above dotted line fat. 7. Hand. 8. Leg. 9. Trotters. D) Mutton: 1. Head and neck (scrag). 2. Neck (middle). 3. Neck (best end). 4. Loin. 5. Loin (chump). 6. Leg. 7. Breast. 8. Shoulder. 9. Trotters.

Meath, Reginald Brabazon, 12th E. of (1841-1920), Brit. diplomat and philanthropist; fndr. and chmn. of many social organisations, incl. Young Men's Friendly Soc. and Duty and Discipline Movement; originator of Empire Day celebrations; writings incl. *Thoughts on Imperial and Social Subjects*, 1906; *Memories of the Nineteenth Century*, 1923; *Brabazon Pot-pourri*, 1928.

Meath, marit. co., Leinster, I.F.S.; area, 906 sq.m.; pop., 63,000; flat or undulating; rivs. Boyne, Blackwater; grazing, linen; co. tn., Trim.

Mecca, trading tn., cap. of Hejaz, Arabia, sit. in a mtn. valley 45 m. E. of Red Sea; pop., 72,800; b.-place of M o h a m m e d ; 100,000 pilgrims yearly; famous mosque, wh. encloses the Kaaba (q.v.).

The Kaaba, Mecca

Mechanical mixture, (chem.) mingling together of substances without alteration to their individ. properties in such a way that mixture can be disintegrated by mechanical means. See CHEMICAL COMPOUNDS.

Mechanics, branch of physics. Science of interaction of force and matter. Branches: *Statics* deals with equilibrium; *dynamics* with motion. **M. of liquids**: hydrostatics and hydrodynamics. **M. of gases**: aerostatics and aerodynamics.

Mechanistic hypothesis, philos. view that all happenings are due solely to forces and causes operating without conscious or unconscious direction. Cf. TELEOLOGY.

Mechitarists, R.C. Armenian relig. order, fndd. 1701, by Mechitar (1676-1749), an Armenian convert, and devoted mainly to cultural improvement of Armenians.

Mechlin: see MALINES.

Mechnikoff, Elias (1845-1916), Russ. biolog.; Nobel Prize (Med.), 1908; *Immunity in Infectious Diseases*, 1901; *The Nature of Man*, 1903.

Mecklenburg, region on Baltic coast, N. Germany, comprising two States: 1)

Mecklenburg-Schwerin, 5,700 sq.m.; pop., 675,000; cap. *Schwerin*; largest tn., Rostock (univ.); includes *Mecklenburg Lake district*, lowlands with over 400 lakes (Müritzer See, 45 sq.m.); agric. and cattle breeding. 2) **Mecklenburg-Strelitz**, 1,130 sq.m.; pop., 112,000; cap., *Neustrelitz*; largest tn., Neubrandenburg.

Meconin, a neutral substance found in opium.

Meconium, 1st faecal motions of an infant.

Médaille militaire, medal awarded to Fr. gen. officers commanding armies, and to N.C.O.'s and men (navy or army), for distinguished service in action. Estab. 1852; ribbon: yellow, with broad green edges.

Medal, piece of metal, usu. circular or cruciform, bearing device recording action, event, or pers.; given as reward of merit, esp. for milit. or nav. services. **Medallion**, large antique medal; circular or oval tablet, bearg. port. or ornamt. in relief.

Medan, seapt., cap. of E. Sumatra; pop., 46,920; exports tobacco.

Medea, (Gr. myth.) dau. of the Kg. of Colchis; helped Jason to obtain the Golden Fleece (*q.v.*); when deserted by him, killed her children.

Medée, opera by Cherubini (*q.v.*), 1797.

Medellín, cap. Antioquia, Colombia, S. Amer., N.W. of Bogotá; pop., 120,000; univ.; gold mining.

Medes, anc. Asiatic race, inhab. of Media whose kgdm. was merged in Pers., 550 B.C.

Media, anc. country of the Medes (*q.v.*), S.W. of the Caspian Sea, roughly corresponding to N.W. of present Persia.

Media, (phon.), voiced consonants at end of word: *b, d, g*.

Media of circulation, total of coins, bank-notes, bills of exchange, cheques, and bank credits, by aid of wh. sale of goods and services and their pymt. are accomplished.

Median (math.), middle of a series of numbers arranged in order of size; for purposes of computatn. often preferable to *mean* value.

Medical corps (in Gt. Brit., *Ryl. Army M.C. q.v.*), undertakes care of sick and wounded of armies. Non-combatants protecd. by Red Cross (*q.v.*). **M. practitioner**, in Gt. Brit., doctor who, having passed his qualifying examination to practise medicine and surgery, is registered by the General Medical Council under the Medical Acts. He is entitled to sue for fees and to sign

death certificates. **M. Research Council**, Brit. Council incorpdtd. by Royal Charter (1920); formerly *M. R. Cmtee*. Assigns funds voted by Parl. or obtd. from private sources to developmt. of med. research. Reports pubd. by Stationery Office. Subsidiary to this Council are: *National Inst. for M.R. and Indus. Merezhkovski, Dmitri Sergeievich (1865-), Russ. novelist and critic; *Death of the Gods*, 1901.

Merganser, the sawbill, fish-eating bird of the duck family with a serrated bill bent like a hook at the end; fnd. in N. parts of Europe, Asia, America.

Mérída, 1) Sp. tn., prov. Badajoz on riv. Guadiana; rly. junction; pop., 15,500; Roman remains. 2) Cap. Yucatan, Mexico: pop., 80,000; cotton.

Meridian, (geog. and astron.) imaginary circle round terrestrial or celestial sphere, passing through the poles and intersecting

the Equator (*q.v.*) at right angles; representation of this on map or globe; (by transf.) noon, midday; (fig.) highest, culminating point of success or happiness, etc. **M. Highway**, extends through centre of N. America from Winnipeg to Mexico; 1,769 miles.

Mérimée, Prosper (1803-70), Fr. novelist; *Colomba*, 1840; *Carmen*, 1847.

Merino, fine wool-len fabric, orig. made of wool from **M. sheep**, a breed of Span. sheep.

Merino Sheep

Merionethshire, marit. co., N. Wales; area, 669 sq. m.; pop., 43,200; surface mountainous (*Cader Idris*, 2,927 ft.); rivs. Dee, Dovey; mainly agric. and pastoral; Welsh ponies; slate-quarries in N.; woollens; co. tn., *Dolgelly*; Barmouth port and seaside resort.

Meristem, (bot.) embryonic plant tissue; cells in process of growth.

Merit, Order of, (Brit.) fndd. 1902 as a recogn. of special distinction in any field. Membership carries neither spec. title nor precedence; 2 classes, milit. and civil, limited to 24 members; ribbon: crimson and blue. Prussian *Order for Merit*, 1st cl. (milit.) fndd. by Fredk. the Great, 1740; 2nd cl. (civil) fndd. by Fredk. Wm. IV, 1842, abol. 1918.

Meritorious Service Medal, medal (rarely awarded) for distinguished service, in peace or war, to sergeants of the British Army and Marines, with annuity not exceeding £20. Estab. 1845 for army; 1849 for marines; ribbon: crimson with white edges and white centr. stripe for army; blue for marines.

Meriwether Lewis, nat. park (1925) in Tennessee, U.S.A., 50 acres; contains grave of Capt. Lewis the explorer; see LEWIS AND CLARK EXPEDITION.

Merlin, 1) famous bard of Welsh tradition; sorcerer of Arthurian Cycle; son of the Devil and a princess. 2) Bird of falcon family, inhab. Europe and N. and Centr. Asia; prevailing colour bluish grey; 10-12 in. long; preys on smaller birds.

Mermaids and mermen, semi-human beings common to the folk-lore of most nations; usually conceived as human down to the waist and, in case of mermaids, of great beauty, and shaped like a fish from the waist down; capable of social relations with mankind and credited with certain vaticinal and vaguely malevolent supernatural powers. Belief in M. has been so strong that various instances of their capture have been recorded as fact.

Meroë, site on Riv. Nile, Anglo-Egyptian Sudan, 150 m. below Khartoum; anc. cap.

of Ethiopian kgdm. (700-300 B.C.) and later of Meroitic kgdm.; ruins of royal palace and temples. **Meroitic language**, Egyptian language deciphered 1910.

Merovingians, 1st Frankish dynasty, 5th-8th cents.; Clovis (481-511) fndd. kgdm. and embraced Christianity, assuming title of "Most Christian Kg. of France," borne by subsequent sovereigns. Succeeded by Carolingian dynasty (Pepin), 752.

Merrick, Leonard (1864-), Eng. novelist and playwright; s. of W. Miller; changed his name by deed poll; *When Love Flies Out of the Window*, 1906; *While Paris Laughed*, 1918; *When the Lamps are Lighted*.

Merrimac River, Massachusetts, U.S.A.; empties into Atlantic; 150 miles.

Merriman, Henry Seton, pseud. of Hugh S. Scott (1862-1903), Eng. novelist; *The Sowers*, 1896; *In Kedar's Tents*, 1897; *The Vultures*, 1902; *The Last Hope*, 1902. **M., John Xavier** (1841-1926), S. Africa statesman; commissioner of public works, 1875, 1881-84; joined Rhodes ministry, 1890; treasurer-gen., 1890-93; 1898-1904; chmn. of Cape parliamentary committee enquiring into Jameson Raid; opposed measures to defranchise Cape rebels, 1900; succ. Jameson as Pr. Min., 1908; in drawing up constitution of new S. African union supported unitary rather than federal principles; opposed Hertzog's policy.

Merry-go-round: see ROUND-ABOUT.

Mersey, riv., Cheshire and Lancs, Eng; rises in Peak Dist., flows past Stockport and Warrington into Mersey estuary betw. Liverpool and Birkenhead; length 70 miles.

Merthyr Tydfil, co. bor., Glam., S. Wales; pop., 71,100; coal-mines, manuf. steel and iron.

Merton and Morden, urb. dist., Surrey; part Greater London; pop., 41,200.

Merton College, Oxford; fndd., 1264, by Walter de Merton, of Merton, Surrey. Bacon and Wycliffe were associated with the college.

Meru, volcano, Tanganyika Terr., E. Africa, S. of Kilima Njaro; 15,600 feet.

Merveilleuse (Fr., marvellous), name given to woman of fashion at the time of the French Directory (*q.v.*). Cf. INCROYABLE.

Merwede Canal (43 m.), from Merwede, on lower Meuse, to Amsterdam.

Méryon, Charles (1821-68), Fr. etcher; esp. scenes of Paris: *Abside de Notre Dame*.

Mesabi Range, Minnesota, U.S.A.; highest point c. 1,900 ft.; large iron ore deposits.

Mesa Verde, nat. park (1906) in Colorado, U.S.A.; 80 sq.m.; prehistoric cliff dwellings.

Mescal, 1) spirit distilled from pulque (*q.v.*). 2) A variety of cactus fnd. in Mexico and Texas; the natives chew the succulent top of the plant, wh. has a narcotic effect.

Mesdag, Hendrik Willem (1831-1915), Dut. painter, noted for marine paintings; *Après l'Orage*, *Rentrée des bateaux de pêche*, *Une Soirée sur la plage de Scheveningen*.

Mesentery, (anat.) folds of peritoneum (*q.v.*) containing the greater part of the intestinal canal.

Meshach: see SHADRACH, etc.

Meshed, **Mash-had**, tn., Khurasan, Persia, on W. side Hindu Kush; pop., 66,200; tomb of Imam Riza; the Mecca of the Shiah (Shiites).

Mesmer, Franz Anton (1733-1815), Austr. physician; gave his name to mesmerism, a form of hypnotism; see HYPNOSIS.

Mesoderm, **mesoblast**, (zool.) middle germ-layer of the embryo.

Mesolithic or Epipalaeolithic Period, (archaeol.) intermediate period betw. Palaeolithic and Neolithic; comprises Azilian, Tardenoisian, Maglemosian, and Shell-Mound (Kitchen Midden) cultures. Climate more temperate than that of Palaeolithic Period.

Mesolonghi: see MISSOLOGHI.

Mesopotamia ("Between the Rivers"), region betw. Euphrates and Tigris, from Armenian highlands to Persian Gulf; Lower Mesopotamia included in Iraq (*q.v.*). In antiquity part of the Assyro-Babylonian Empire; Turkish from 1648, till World War, when conquered by British; kgdm. of Iraq since 1921.

Mesothorium, radio-active disintegration product of thorium (*q.v.*). Used as constituent of luminous paints.

Mesozoic Period, one of the main geol. eras; see GEOLOGICAL FORMATIONS.

Messenger, André (1853-1929), Fr. composer: *Veronique*, 1898.

Messalina, Valeria, consort of Rom. Emp. Claudius; exec. A.D. 48; notorious for her sexual excesses.

Messenia, dist. (1,290 sq.m.) S.W. Peloponnesus, Greece, W. of Taygetus Mtns.; pop., 130,000; mod. cap., *Kalamata*. Conquered by Sparta in First Messenian War (before 700 B.C.); inhab. either emigrated (see MESSINA) or were turned into helots (*q.v.*). Revolted unsuccessfully c. 650 and 464 B.C. Restored by Epaminondas after battle of Leuctra (371 B.C.), and new cap., *Messene*, founded 369 B.C.

Messiah (the anointed), 1) title of kgs. in O.T., esp. David; synonym for Christ in N.T.; 2) (mus.) oratorio by Handel, 1742.

Messidor, June 19th-July 18th in Fr. Repub. calendar (*q.v.*).

Messier, Charles (1730-1817), Fr. astron.; globular star clusters designated by his initial M, and a number; see STARS.

Messina, 1) Prov., N.W. Sicily; 1,270 sq.m.; pop., 654,000; mountainous; fruit, corn, oil. 2) Cap. of prov., on *Strait of M.*

(betw. Italy and N.W. Sicily; 2 m. wide; currents include the once-dreaded Scylla and Charybdis [*q.v.*]); pop., 204,000; univ. (1538); fortified harbour; destroyed by earthquake, 1908. Founded before 700 B.C.; received refugees from Messenia (*q.v.*) who changed name from *Zancle* to *Messana* (later *Messina*).

Messines, vill., W. Flanders, Belgium, 6 m. S. of Ypres, tactically important in World War. Capture of *M. Ridge*, 7 June, 1917, by Brit. II Army (Gen. Plumer) was conspicuous example of successful "limited offensive."

Mess of pottage, expression derived from chapter heading of Gen. xxv in *Matthew's Bible* (1537), not found in *A.V.*; denotes a disadvantageous exchange; see ESAU.

Mestizo (fem. *mestiza*), orig. person of mixed Span. or Portug. and Amer. Indian descent; occas. used of any half-breed.

Meštrovič, Ivan (1883-), Yugoslav sculptor; exhibited at Austrian Exhibition, London (1906), Victoria and Albert Mus. (1915), Grafton Galleries (1917), etc.; chf. works: memorial figure of Bp. Strossmayer; portrait of Pres. Masaryk of Czechoslovakia.

Metabolism, the chem. changes taking place in the protoplasm (*q.v.*) of living matter; sometimes divd. into *anabolism*, chemical building-up of simple food materials into complicated protoplasm constituents, and *katabolism*, breaking-down of these into waste products.

Metacentre, (phys.) point of a floating body at wh. the buoyancy appears to act. The M. in a ship must be higher than centre of gravity to ensure stability.

Metagenesis, or alternation of generations; alternate reproductn. by sexual and asexual processes, occurring in some invertebrates and plants.

Metal Exchange, more or less independent branch of produce exchanges for copper, lead, zinc, and tin; princ. M.E., in London, New York, Berlin, Hamburg.

Metal: see METALS. **M. spraying**, method of forming bright coating on paper, cloth, etc., from wire fed into oxyhydrogen or oxyacetylene flame (Schloop method).

Metallography, science of the atomic and crystalline structure of sol. metals and alloys: metal is polished highly, gently etched with suitable chemical, and examined by microscope; X-rays and ultra-violet light also used.

Metalloids, arsenic, boron, phosphorus and sulphur, having properties intermediate betw. those of metals and non-metals.

Metallurgy, art of smelting metallic ores for recovery of pure metal, and of making alloys, etc.

Metals, chemical elements, all solid except mercury, possessing lustre; good conductors of heat and electricity mostly malle-

able and ductile. Chemically *electropositive* (see IONIC THEORY) forming hydroxides and salts by replacing hydrogen in water and acids. Some, however, also form acids with oxygen, e.g., chromic acid. Form *alloys* (compounds, mixtures, and solid solutions) with one another, and combine with non-metals to form oxides, sulphides, etc.; some of these compounds, e.g., selenides, tellurides, are metal-like. *Noble* metals, gold, platinum, iridium, etc., occur native, as also do copper, silver (iron and nickel in meteorites and prob. in interior of earth). Other metals occur as mineral compounds; the useful and available minerals are called *ores*. Hydrogen, although a gas, is chemically a metal, but as liquid and solid not metallic. Most metals exhibit several chemical *valencies* (q.v.).

Metamorphic rocks, rocks which have been transformed by heat, pressure, and chemically by water and substances carried in solution.

Metamorphoses, poetical work by Ovid, based on princip. class. legends.

Metamorphosis, transformation. 1) (Myth.) Changing of person into an animal, tree, or inanimate object. 2) (Zoology) Collective term denoting the stages thr. which an animal passes before reaching full development. In insects, when these stages pass from larval and pupal state to the imago, or mature state, M. is said to be *complete*; where pupal stage is absent, M. is *incomplete*.

Metaphor, similitude briefly expressed without indication of comparison, e.g., "after life's fitful fever."

Metaphysical poets, 17th-cent. Eng. poets addicted to far-fetched imagery and witty conceits; incldg. Cowley, Crashaw, Donne, Herbert, Traherne, and Vaughan.

Metaphysics, systematic study of ultimate foundations of being and knowledge; named from works of Aristotle wh. followed "after" (Gr. *meta*) his "physics," hence transcending physics, going beyond and deeper.

Metastasio, Pietro Bonaventura (1698-1782), assumed name of Ital. poet: P. Trapassi: *Attilio Regolo*.

Metastasis, (med.) the conveying of diseased material from the original focus of disease to another part of the body by the lymphatic vessels or bloodvessels; material may be malignant, or septic.

Metathesis (Gr.), rearrangement of letters, e.g., in the word "wasp," where the two final letters were originally in reverse order.

Metaurus, Battle of the (207 B.C.), defeat of invading Carthaginians, under Hasdrubal (killed), by Romans under the consuls Livius and Nero; named after Riv. (now Metauro), N. Italy, flowing into Adriatic. Ranks as one of world's decisive battles.

Metazoa, (biol.) multicellular animals.

Metempsychosis, doctrine of transmigration of the soul after death into another body, whether of a human being or of a lower animal; fundamental characteristic of Indian philosophy. See PYTHAGORAS.

Meteorological Office, centre of Brit. meteorol. observations, fndd. 1854; formerly a dept. of Board of Trade, now attached to Air Ministry. **Royal M. Society**, fndd. 1850 for encouragement of meteorol. science; publ. *Quarterly Journal* and *The Meteorol. Record*; hdqrs., 49, Cromwell Rd., London.

Meteorology, science of atmospheric processes and conditions in their effect upon weather and climate; based on study of pressure and temperature of air, direction and strength of wind, and precipitation (q.v.). *Apparatus*: thermometer, barometer, anemometer, hygrometer, rain and snow gauge, evaporimeter, nephoscope, sunshine recorder, etc. Organised meteorol. observations carried out by individual nations at *Weather Bureaux*, *Meteorol. Offices*, etc., which issue official forecasts of probable weather over specified areas.

Meteors, cometary bodies, "shooting stars," wh. become luminous through friction caused by passage through earth's atmosphere at average speed of 25 m. per second. Showers of M. appear at certain regular times of year apparently from fixed point in heavens; chf. systems of these, named fr. constell. forming their radiant point, are: *Lyrids*, Apr. 19th-20th; *Pegasisds*, Aug. 10th; *Perseids*, Aug. 9th-11th; *Andromeds*, Nov. 27th; *Orionids*, Oct.-Nov.; *Taurids*, Nov. 1st-15th; *Leonids*, Nov. 13th-14th. Very bright, slow-moving meteors are known as *fire-balls*. **Meteorites**, fragments of exploded Ms. wh. fall to earth; composed of crystalline stone or iron and nickel; largest known meteoric stone nearly 647 lbs. av.; largest iron meteorites, over 49 tons at Grootfontein; heaviest shower of meteorites, over 100,000 fragments at Pultusk, Poland, 1868.

Meter, electric, various instruments for measuring current (*ammeter*), tension (*voltmeter*), power (*wattmeter*), frequency, power-factor, etc. *Supply meters* measure energy (Brit. Board of Trade Units) supplied to users; *ampere-hour meters* assume constancy of voltage, *watt-hour meters* measure true energy.

Methane, (chem.), marsh gas; sym. CH₄; simplest hydro-carbon, occurs in marshes; colourless, tasteless gas; burns with non-luminous flame; present in coal gas up to 40%; when mixed with air forms fire-damp, which causes explosions in coal mines. **M. series**: paraffin series, saturated hydrocarbons; gen. formula, C_nH_{2n+2}, e.g. ethane, propane, butane, etc.; transition from gases to liquids and from liquids to solids.

Methil: see BUCKHAVEN AND METHIL.

Methodists, Eng. relig. sect fndd. 1729 by John Wesley (q.v.) and his brother Charles, for purpose of practising religion more "methodically"; spread quickly and soon subject to much internal division. Wesleyan M., or "Wesleyans" did not formally secede from C. of E. until 1795; other denominations are: *Episcopal Methodist Ch. of U.S.A.*, fndd. by Thos. Coke; *The Countess of Huntingdon's Connexion* (q.v.); *Welsh Calvinistic M.*; *M. New Connexion*; *Primitive M.*; *Bible Christians*; in 1857 the *United Methodist Free Ch.* was formed by union of Protestant M., Wesleyan M. Association, and Wesleyan Reform Association, and this in 1907 united with the M. New Connexion and Bible Christians to form the *United M. Ch.* All English M. were re-united into one church in 1932.

Methodius, St. (825-85), apostle of the Slavs, bro. of St. Cyril; Abp. of Syrmia (prov. in vall. of Drave, Hungary).

Methuen, Field-Marshal Paul Sanford M., 3rd bn. (1845-1932); C. O. 1st Div. 1st Army Corps in S. Africa, 1899-1900; Gov. of Malta, 1915-19.

Methuselah, (O.T.) son of Enoch, said to have lived to age of 969 (Gen. v).

Methven, territorial dist. of Perthsh., Scotland.

Methyl, (chem.) - CH_3 ; organic radical, methane minus one hydrogen atom., occurs only in combination. **M. violet**, mixed dye prod. from dimethylaniline, $\text{C}_6\text{H}_5\text{N}(\text{CH}_3)_2$; used for ink, inking pads, staining bacteria, and also as dye.

Methylated spirits, sold in Gt. Brit. as mixture of ethyl alcohol and wood naphtha, pyridine, thus rendered unfit for drinking. Indust. M.s. contain ethyl alcohol 95%, wood naphtha 5%, pyridinised M.s. 0.5% in above mixture. Mineralised M.s. contain ethyl alcohol 90%, wood naphtha 9.5%, pyridine 0.5%, with small quant. of mineral naphtha and an aniline dye. Used as a fuel and as a solvent for manuf. processes; if drunk, may cause blindness.

Methylene, (chem.) organic radicle, = CH_2 ; occurs only in combination. **M. blue**, $\text{C}_{16}\text{H}_{11}\text{N}_3\text{SCL}$, very important fast coal-tar dye for silk and cotton; for staining bacteria (Löffler's reagent); in med. for testing efficiency of kidneys, as it is eliminated in urine.

Metics, **Metoikoi**, resident aliens in anc. Gr. city; entitled to protection but not to civic rights; paid a poll-tax.

Metis, 1) (Gr. myth.) personification of prudence; first wife of Zeus. 2) (Astron.) Name given to a planetoid disc. 1848.

Metope (archit.): see COLUMN.

Metre, 1) (abbr., m.), the basic unit of length in the metric system, introduced in

Fr., 1799; orig. intended to equal 1 ten-millionth of the earth's surface, measured from the pole to the Equator, now defined as the distance (39.371 in.) betw. lines on a platinum-iridium bar (at 0° C) kept at the Internat. Metric Bureau, Paris. *Metrokilogram* (mkg.), the technol. unit of work, i.e., the work required to raise 1 kg. 1 m. (= 7.233 ft. lbs.). 2) (Prosody) Any verse scheme, quantitative or accentual or stanzaic arrangement.

Metrical foot, division of verse containing stressed syllable, divided accordg. to rules of prosody.

Metric system, the system of measurement used in most European and many other countries. It is based on the metre (q.v.), the unit of length, and kilogram (q.v.), the unit of mass. The litre (q.v.), the unit of capacity, is the vol. of 1 kg. of water at 4° C.; and the relationship between the three units is:—1-roth. cu. m. = 1 litre, and 1 litre of water weighs 1 kg. All other units are the decimal subdivisions or multiples of these; divisions named by the Latin prefixes *milli-*, *centi-*, *deci-*, multiples by the Gr. prefixes *deca-*, *hecto-*, *kilo-*, *myria-*, all of which see. **M. ton**, *tonne*, *millier*, 10 quintals, or 1,000 kilograms, or 2204.6 lbs.

Metronome, (mus.) piece of adjustable mechanism for beating time at various tempi; the one in general use invented by Mälzel (1773-1838).

Metronome

Metropolitan, (eccles.) an abp.; in Gr. Orth. Ch., the head of a group of churches, ranking next beneath a patriarch and next above an archbishop. **M. Borough**, one of 28 areas into wh., outside City, London is divided. **M.B. councils** have, broadly, same status and powers as councils of prov. boroughs, but form less distinctive areas. **M. Water Board**, founded 1902 to centralise water supply for London and neighbourhood; 66 members, nominated by local authorities in supply area (574 sq.m.); average daily supply nearly 300 million gallons.

Metsu, Gabriel (1630-67), Dut. painter: *The Sportsman*, 1661.

Metternich-Winneburg, Pr. von, Clemens (1773-1859), Austrian statesman; Min. of For. Affairs, 1809; Pres. Congress of Vienna, 1815.

Metz, fortress tn., France, cap. dépt. Moselle, on Riv. Moselle; pop., 70,000; bpric. since 5th cent., 13th cent. Gothic cathed. (see III. next page); tobacco; preserved fruits and vegetables. Captured by Germans after short siege, 1870; restored to France, 1918.

Metternich

Meum et tuum (Lat.), mine and thine; with reference to personal property.

Meunier, Constantin (1831-1905), Belg. sculptor and impressionist painter: *The Hammerer*, 1886.

Meurthe, riv., France, right trib. of Moselle; rises in Vosges; length, 106 miles.

Meurthe-et-Moselle, dépt. N.E. France;

Metz, Cathedral

2,036 sq.m.; pop., 592,600; vineyards; iron ore deposits; cap., *Nancy*.

Meuse, 1) or *Maas*, riv., E. France, Belgium, and Holland (498 m.); rises Plateau de Langres (see LANGRES); joined to Riv. Waal (q.v.; S. branch of the Rhine) at Merwede; flows through sev. distributaries (Oude Maas, Nieuwe Maas, etc.) into N. Sea; united by numerous canals with rivs. Scheldt, Aisne, etc., and by Merwede Canal with Amsterdam. 2) Dépt., N.W. France (2,400 sq.m., pop. c. 218,000); surface hilly; cap., *Bar-le-Duc*.

Mewar: see UDAIPUR.

Mexico, 1) federal repub., N. Amer.; bounded N. by U.S.A. and S. by Centr. Amer. (Guatemala and Brit. Honduras). Separates Atlantic (Gulf of M.) from Pacific. Main terr. comprises the S. end of N. Amer. Continent, tapering to isthmus of Tehuantepec (betw. Bay of Campeche and Gulf of Tehuantepec), and then spreading outwards on N. to form penins. of Yucatan. From N.W. frontier the long narrow penins. of Lower California runs S., parallel to the mainland, enclosing Gulf of California. Area, 767,200 sq.m.; pop., 16,500,000 (50% half-breeds, 33% Indians).

Narrow coastal plains, with series of lagoons betw. the mtns. and the sea. The Sierra Madre (9,000 ft.) rises steeply from the W. plains, protecting a high inland plateau (6,500 ft.): a corresponding series of ranges border the plateau on the E. Highest peaks Orizaba (18,210 ft.) and Popocatepetl (17,890 ft.). Frequent earthquakes. Rio Grande del Norte (largest riv.; 1,750 m.) forms boundary betw. M. and Texas; many

other rivs. (few navigable). Climate varies with altitude and latitude (most of M. within tropics). Four regions distinguished: a) *Tierra Caliente*, coastal districts, low-lying, hot, and unhealthy; trop. vegetation; alligators and turtles; poisonous insects; lagoons and sand-bars impede shipping. b) *Tierra Templada* (3-5,000 ft.), warm and moist, most suitable for agriculture assisted by irrigation (riv. valls. very fertile): chf. crops, maize, sugar-cane, sisal hemp (Yucatan), bananas, oranges, rice, cotton, tobacco. c) *Tierra Fria* (5-9,000 ft.), temperate and dry; forests. d) *Tierra Helada* (abv. 9,000 ft.) cold. Fauna include wolf, coyote, and bear, ocelot, lynx, tapir, vampire bats; great variety of birds (parrots, turkeys, humming birds, etc.).

Mineral resources enormous: mines of silver, gold, copper, lead, zinc, graphite, etc. Equally important is the production of petroleum. Rlys., 18,100 m.; cap., *Mexico City* (q.v.); chf. ports, Vera Cruz and Tampico, both on Gulf of Mexico. *Constitution*: Federal repub. of 28 states, one Fed. Dist. and three territories: President (6 yrs.); two chambers. Each state has its own legislators, executive and judiciary. *History*: Aztec empire conquered by Cortez, 1510-21. As *New Spain*, M. became richest Span. colony (governed by viceroy). Independent 1821. Iturbide first emp., 1822-23; repub., 1823-63. War with U.S.A., 1846-48 (loss of Texas). Archduke Maximilian of Austria, brother of Francis-Joseph, Emp. of M., 1863 (deposed and executed, 1867). Repub. since 1867 (Díaz, pres., 1877-80 and 1884-1911). Civil War, 1911-20; country still disturbed over relations of Church and State, petroleum, and policy in regard to U.S.A. 2) See MEXICO CITY. 3) Inland State of repub. of Mexico; 9,200 sq.m.; pop., 978,400; encloses Fed. District. 4) Tn., Missouri, U.S.A.; pop., 8,000.

Mexico City, cap. of Mexico and of Federal Dist., (580 sq.m.), pop., 968,450; lies in centr. plateau midway (c. 200 m.) betw. Gulf of Mexico and Pacific, 3 m. above L. Texoco; cathed. on site of Aztec temple; nat. palace (govt. offices) on site of palace of Montezuma; nat. museum and library; univ.; Plaza Mayor and other squares; Alameda (public garden); iron foundries, cotton mills, tobacco factories.

Mexico, Gulf of, inlet of Atlantic Ocean, forming N.W. (and shallowest) part of Caribbean Sea; area, 716,000 sq.m.; water warm; source of Gulf Str.

Meyerbeer

Meyer, Viktor (1848-97), Ger. chem.; invtd. meth. of estimating molecular weight.

Meyerbeer, Giacomo (1791-1863), Ger. composer of grand opera (*q.v.*); *Robert le Diable*, *Les Huguenots*, *L'Africain*, *Le Prophète*.

Meynell, Alice Christina (1850-1922), Brit. poet; dau. of T. J. Thompson; m. W. Meynell, 1877; *A Father of Women*, 1917; *The School of Poetry*, 1923; *The Second Person Singular*, 1921.

M.E.Z., abbr. *Mittelenropäische Zeit* (Ger.), Centr. European time. See **TIME**.

Mézières, fortified tn., N.W. France, cap. dépt. Ardennes, on Riv. Meuse; pop., 10,000. Ger. G.H.Q., 1914-15.

Mezzo, (mus.) half; mf. = *M. forte*; mp. = *M. piano*; mv. = *mezza voce*, with half the voice.

Mezzotint, method of engraving on a plate of which the surface has been roughened by means of a "rocker," giving a rich, velvety background, the light passages being obtained by scraping away the surface. Introduced into England by Prince Rupert and fashionable for reproduction of portraits in 18th century.

Mg, chem. symbol of magnesium. **mg.** abbr. myriagram. **mg.**, milligram.

Mgr., abbr. monseigneur (Fr.), my lord; title of a prelate in R.C. Ch. connected with Papal court.

MHO, electrical unit of conductivity, or reciprocal ohm (*q.v.*).

Miami, tn., S.E. Florida, U.S.A., on Biscayne Bay; pop., 85,000; winter resort.

Miasma, pollution of air by noxious germs or particles.

Mica, a group of silicates, chiefly of aluminium, which split readily into thin, tough, transparent sheets; used for lamp chimneys and glasses, side-screens for motorcars, and for parts of heating apparatus where transparency is necessary or desirable. Common *M.* is talc (*q.v.*); other varieties are *Muscovite* (potash *M.*), and *Phlogopite* (magnesia mica). **M. schist**, slaty rock composed of quartz and mica.

Micro-, as prefix in units of measurement, means one-millionth; e.g., micro-volt, micro-ampère, micro-ohm.

Microbes: see BACTERIA.

Microcephaly, abnormal smallness of skull, accomp'd. by normal growth of body.

Microcosm, man regarded as a complete epitome of the universe within himself; *see* MICROCOSM.

Micrometer, instrument for the accurate measurement of very small distances (to $\frac{1}{1,000}$ mm. or $\frac{1}{10,000}$ in.).

Micron, (abbr. *usu.* *mu*) = $\frac{1}{1,000}$ mm: 1 in. contains 25,400 microns.

Micronesia, groups of isls. in W. Pacific, N. of Melanesia (*q.v.*); include Ladrões (Marianas), Caroline, Gilbert, and Marshall isls.; 1,320 sq.m.; pop., *c.* 25,000. *See* OCEANIA.

Microphone, apparatus by which variations in air-pressure, constituting sound, are caused to produce corresponding variations in elec. current or voltage. **Carbon m.**, commonest and original (Hughes, 1878); thin membrane in contact with granules of carbon forming part of elec. circuit; sound vibrations cause variation in contact resistance betw. granules. **Condenser m.**, has membrane forming one plate of condenser, capacity of wh. varies with movement of membrane. **Moving-coil m.**, any moving-coil loud speaker (*q.v.*) will act as M.; sound causes coil to move in magnet gap, whereby currents are induced in it corresponding to sound vibrations. Voigt's *Cathodophone* made use of direct disturbance of ionised gas by air vibrations; used to make first talking pictures.

Microscope, optical instr. for examining very small objects; two optical systems: *objective*, wh. gives a reversed real image of object under exam. highly magnified; and the *eyepiece* (*q.v.*), a 2nd system of lenses thr. wh. the eye sees the picture. Transparent objects are viewed by light reflected from below; opaque ones are lighted from above. Objects approaching in minuteness length of light waves cannot be seen. An *ultra-microscope* (*q.v.*) permits their existence, but not their shape, to be recognised. First M. supposed to have been made by Johann and Jacob Janssen (1590). *See also* OPTICS.

Microtome, device for cutting very thin and uniform successive sections of animal or veg. tissue for microscopic examination. Tissue is *usu.* hardened by various chemicals, and stained by substances wh. attach to parts of structure and not others, thus enabling it to be seen; then made solid for cutting by

Mining, extraction from earth of valuable minerals, e.g., iron, gold, and other metal ores, diamonds and other stones, coal. According to the situation of such mineral deposits, mining may be effected at or near earth's surface or by sinking shafts and tunnelling into earth's crust. Among the problems to be considered are those of the most profitable lay-out of shafts and tunnels, drainage and ventilation, transportation of minerals along tunnels to shaft and their haulage to surface, lighting, the protection and health of miners, the precautionary measures to be taken against accidents, explosions, etc., and the profitable marketing of minerals. Width of tunnels and distance betw. them are determined by character and strength of overlying and surrounding rock beds, and their length by considerations of practicable and economical haulage of minerals to the shaft; drainage is effected by pumping, and ventilation by shafts; loosened ore, coal, etc., usually loaded on to trucks, wh. are hauled on rails to the shaft by man-, pony-, or mechanical-power; lighting is provided by electricity where practicable, or by safety lamps, in wh. the flame is protected from contact with explosive gases. Chief sources of danger are collapse of tunnels, flooding with water, foul gases and explosions, and, despite all precautions, accidents due to each of these causes are not infrequent. Worked-out veins of ore are either propped up, filled in with rock, or allowed to cave in. *See also* ORE-DRESSING. **M. rights**, ownership of minerals existing below surface of land; in common law, belong to owner of surface-land, unless reserved by previous owner, but have in many cases been detached by law from surface-owner in public interest. Moment, 1) (mech.) of a force about an axis: product of force into perpendicular to axis and to direction of force. **M. of Inertia**, measure of resistance of body rotating about an axis to change in its rate of rotation; corr. to inertia of body moving in straight line. For any body it is sum of mass of every particle \times square

Moment of Rotation of distance from axis; Σmr^2 . 2) (Math.) Of a body with regard to any line or plane is the sum of products of each element of mass of body by its distance from the plane. This sometimes called 1st M. The 2nd M., 3rd M. . . . of plane or solid figure found in same way by multiplying each element by square, cube . . . of distance from line or plane, and summing. If 1st, 2nd, 3rd Ms. be divided by total volume, area or length of figure, we obtain mean distance, mean square of distance, mean cube of distance of figure from line or plane. Mean dist. of plane figure from line in its plane, or of any fig. from plane is, therefore, same as distance of centroid of figure from line or plane. In *Stats.*, M.D., M.S. of D., M.C. of D. sometimes referred to as 1st, 2nd, and 3rd Ms. These play very important

part in comparison of frequency distributions (Curve Fitting). Prof. K. Pearson has classified unimodal frequency distribns. into several types and by comparison of 1st 4 Ms. it is possible to assign type to which particular distribn. belongs.

Money, general medium of payment; may be either intrinsically valuable (gold, silver, etc.) or valueless (notes, etc.); standard of value of all commodities and medium of exchange; see GRESHAM'S LAW. **Quantity theory of m.**, important econ. doctrine that gen. prices of commodities vary in exact proportion to quantity of M., amt. of production remaining equal. In modern conditions theory is subject to many qualifications and has given rise to much controversy. The most important qualifications are: that involved in the rate at wh. the money in circulation is used—or its *velocity* of turnover; and the inclusion in the term "money" of bank credit and other media of exchange; difficulty also arises in determining an accurate measure of general price level (see INDEX NUMBERS) and of measure of production; most common modern fallacy connected with the theory is belief that by mere increase in media of exchange, a rise in price level can be brought abt.; this is not the case, because incrsd. quantity will not affect prices unless used to purchase goods, its use depending on persons who may prefer to save it. Velocity of turnover depends on many factors; it influences, to a large extent, rise in prices in countries where inflation has occurred, e.g., post-war Germany. **M.-lender**, a person or firm carrying on the business of lending M. with the exception of banks, friendly societies (*q.v.*), insurance companies. Mouflon, wild mountain sheep of Sardinia and Corsica; spiral horns, saddle-shaped mark on back; now nearly extinct.

Mould, family of small, often parasitic fungi, composed of thin threads, each consisting of a row of single cells, and found as furry patches on decaying vegetable or animal matter.

Mouflon

Moulding, 1) the art of making moulds for casting metals. When for use only once they are made of moulding sand, wh. is pressed firmly around a wooden or metal pattern, wh. is then removed. Hollows are prod. by inserting *cores* (q.v.). Important developments hv. bn. made in moulding machinery, greatly increasing speed and reducing skill required. Ms. also made of metal and can then be used for a large number of castings. For statuary they are made of clay; sometimes the method called *cire-perdue* is used, the pattern being of wax, wh. is melted after the mould is made, without the latter being taken apart. 2) (Archit.) Projection or ledge ornamenting a wall; may be square, concave, or convex in outline; see EGG AND DART; OGEE.

Moulin, vertical shaft in a glacier, formed by a stream of surface water pouring into a crevasse (q.v.); also the stream wh. does this.

Moulines, cap. dépt. Allier, France; pop., 23,300; cathedral.

Moulmein, scapt., Burma, on Gulf of Martaban; pop., 61,300; docks; exports rice and teak.

Moult, **moulting**, yearly change of feathers of birds.

Mound bird: see MEGAPODE. **M. City Group**, nat. monument (1923) in Ohio, U.S.A.; prehistoric Ind. mounds.

Nith, riv. (80 m.), S. Scot.; rises E. Ayrsh.; flows through Nithsdale into Solway Firth.

Nitra, Neutria, tn. in Czechoslovakia, on Riv. Nitra, a left trib. of the Waag; pop., 21,260; R.C. bishopric.

Nitrates, salts of nitric acid (*q.v.*). **Nitration**, introd. of nitro group (-NO₂) into an organic substance, *e.g.*, in prod. of nitrobenzene (C₆H₅NO₂). **Nitre**: *see* SALTPETRE.

Sweet spirits of N.: *see* NITROUS ETHER.

Nitride, compound of a metal, or cert. non-metals, with nitrogen, usu. cntg. one atom of nitrogen, often explosive. **Nitrification**, conversion of ammonia and other nitrogen cntg. substances in soil into *nitrates* by means of (nitrifying) bacteria. **Nitric acid** (chem.), HNO₃; inorganic acid, forms salts (nitrates), from wh. it is prod. by distillation with sulphuric acid; heavy fuming liquid, formerly known as *Aqua fortis* owing to its corrosive action; dissolves silver, but not gold; used in many indus. processes, *e.g.*, manuf. of nitro-glycerine (*q.v.*). Stains skin bright yellow; used to eradicate corns and warts. **Nitrifying bacteria**, organisms which are able to fix chemically the nitrogen of the air, thus making it available first for plant food, and so for animal food. Leguminous plants (peas, beans, clover) have

nodules on roots in which these bacteria live.

Nitrobenzene, (chem.) sym. $C_6H_5NO_2$ ("oil of mirbane"); yellowish liquid with smell of bitter almonds, made by treating benzol with sulphuric and nitric acids; used to scent cheap soaps; aniline is made by reducing it.

Nitrogen, (chem.) element, N; at. wt., 14.01; b.p., -196°C; wt. of 1 litre = 1.2506 grammes; density as compared with air, 0.9674. Colourless, odourless, tasteless gas, forming about 4/5ths of atmosphere; essential constituent of protoplasm (q.v.) and hence of living creatures; found as nitrate in minerals (see CHILE SALTPETRE); chemically very inactive, hence used in many cases where inactive gas is needed, as in elec. glowlamps. Combines with oxygen only in elec. arc (also lightning flash). Forms several oxides, N_2O (nitrous oxide, laughing gas), NO (nitric oxide), NO_2 , N_2O_3 , N_2O_5 . N_2O_5 with water forms nitrous acid (q.v.). **Fixation of N.**: intensive agric. requires soil to be suppl. with nitrogen compounds (nitrates, ammonia). N. of air "fixed" (i.e., combined) by a few bacteria, and by elec. discharge. *Haber-Bosch* process combines N. of air with hydrogen to form ammonia, in strong steel towers 40 ft. high, at 200 atmos. pressure and 550°C.; catalyser (q.v.) iron. Resultant ammonia is combined with sulphuric acid to form amm. sulphate, or oxidised to nitric acid, converted to ammonium nitrate (explosive), calcium nitrate; all fertilisers. **Nitrogen trichloride**, NCl_3 ; very dangerous explosive; pale yellow, pungent-smelling liquid, formed by action of chlorine gas on ammonia, or electrolysis of ammonium chloride solution.

Nitrogenous food, contains nitrogen in available form for body-building and replacement of wear and tear. Meat, milk, eggs, cheese, etc., are mainly nitrogenous; peas, beans, lentils, etc., contain large amounts of available nitrogen.

Nitro-glycerine, sym., $CH_2ONO_2.CH_2ONO_2$; explosive oil made from glycerine and nitrosulphuric acid; mixed with kieselguhr forms dynamite (q.v.). Used in med. for heart affections.

Nitrous acid, HNO_2 , very unstable substance; sodium nitrate largely used in manufacture of coal-tar dyes; N_2O_5 with water forms *Nitric acid* (q.v.). **N. ether**, or sweet spirit of nitre, a B.P. drug containing 2-4% of ethyl nitrite, ether, and aldehyde in alcohol. Ethyl nitrite reduces blood pressure.

Nitti, Francesco (1868-), Ital. statesman and economist; Pr. Min., 1919-20.

Nivelle, Robert George (1856-1924), Fr. gen.; held Verdun, 1916; suc. Joffre as c.-in-c., 1916-17.

Nivôse, Dec. 21st-Jan. 19th in Fr. Repub. Calendar (q.v.).

Nizam, title of ruler of Indian native State of Hyderabad (q.v.); first used by Asaf

Jah, *N.-ul-Mulk*, general and minister of Aurangzeb, who fndd. the State in early 18th century.

Nizami, 12th cent. Pers. poet; *Divan*.

N.J., abbr. New Jersey.

N. Mex., abbr. New Mexico.

N.N., abbr. *nonien nescio* (Lat.), I do not know the name; or *nomen nominandum* (Lat.), name to be mentioned.

Nô, Jap. ceremonial drama in wh. stately dance is adapted to incidents of drama, embracing legends, quaint fancies, and relig. sentiments; 335 N. dramas in collection *Tôkyoku Tsuge*.

Optative, mood of verb expressing a wish.

Optic nerve, the nerve of sight, wh. when stimulated by impressions of light falling on retina at the back of the eye conveys such impressions to the brain.

Optics, science of light; **geometrical O.** deals with reflection and refraction of light assuming strictly rectilinear propagation; **physical O.** deals with diffraction, dispersion, interference, polarisation, etc., etc., all phenomena which require physical theory (electromagnetic waves, quantum theory); **applied O.** deals with optical instruments, e.g., Microscope: see fig. The objective, a compound lens, would form a *real* image of the object on the other side of eye-piece, which, catching the rays, forms them into a magnified *virtual* image which is seen by the eye when held close to the eye-piece. Astronomical telescope: rays from the distant object are formed by object glass into a real image before they reach eye-piece, which consists of convex lens combination and magnifies real image just as it would real object (in fig. full lines show rays from top of object, dotted from bottom. In reality they are nearly parallel). The A. telescope gives inverted image, as can be seen from fig. Dispersion of light by prism (*Newton's experiment*): ray of sunlight admitted through shutter into dark room falls on prism and is dispersed into its component colours, red light being least bent, violet most. Spectrum appears on white screen. *Huygens' principle*: light passing through hole in screen behaves as if every point at hole (or elsewhere) were source of separate spherical wave; these reinforce one another only along centr. area. Hence amount of light bent by edges of slot unnoticeable except when slot is very narrow; then bands produced by diffraction appear. Interference of two trains of light waves so that crests of one coincide with

troughs of other, hence extinction. Solar spectrum with *Fraunhofer lines*: in spectrum of sun when perfectly produced by narrow slit, many black lines are seen, due to absorption of white light emitted from sun's body in the atmosphere of glowing gas containing nearly all known chemical elements, which can be identified by wave-length of lines (see SPECTRUM). In fig. wave-lengths are given below in millionths of millimetre ($\mu\mu$).

Optimates, aristocratic party in Rom. Republic, in distinction from the *Populares* (*q.v.*), the people's party.

Optimism, state of mind in wh. all things appear pleasant and hopeful; theory that the actual world is the best possible. Ant.: *pessimism*.

Option, guaranteed right of choice, esp. right to purchase or make offer for an article, e.g. a house or piece of land, before it is offered to another customer. In partic.: 1) right to choose nationality when terr. of one State is ceded to another (e.g., Schleswig, Eupen-and-Malmédy, and Silesia under Treaty of Versailles). 2) In a contract, right conceded to a creditor to choose what he requires, or to demand an extension of orig. contract. 3) (Stk. Exch.) Agreement by wh. holder has right (for which he pays a premium) to purchase or sell a given no. of shares at a specified price within a certain period. *Call O.*, right to buy; *put O.* right to sell; *double O.*, right to buy or sell. In U.S.A. known as *privileges*.

Opuntia, genus of Amer. plants of cactus fam., with brilliantly coloured flowers, incl. prickly pear (*q.v.*).

Orsova, Rumanian tn. on Riv. Danube, near Iron Gates; pop., 5,000; Hungarian before 1919.

Ørsted, Hans Christian (1777-1851), Dan. nat. philos.; disc. electro-magnetism.

Orthez, small tn., Basses-Pyrénées, S. France, near Pau. Near here Soult was defeated by Wellington, 1814.

Ortho-, prefix; straight, right.

Orthochromatic: see ISOCHROMATIC. **O. photography**, process which attempts to render coloured natural objects as truthfully as possible in monochrome. Silver bromide in plate or film is too sensitive to blue light, too little sensitive to red; hence uncorrected plate gives blue as white, and red as black. Correction by 1) bathing plate in dyes which change sensibility; 2) interposing screens of coloured glass or gelatine; *colour filters*

Orpheus

(q.v.), which weaken rays to which plate is excessively sensitive.

Orthoclase, potash feldspar (K_2Na) $AlSi_3O_8$; chief constituent of granite, gneiss, porphyry, etc. **Orthoclastic**, term applied to crystalline rock, esp. feldspar (q.v.), having a cleavage at right angles; cf. **PLAGIOCLASTIC**.

Orthodox, right thinking; adhering strictly to (relig.) dogma; **O.-Anatolian Church**, official designat. of Grk.-Cath. Church (q.v.). **O. Eastern Church**: see GREEK CHURCH.

Orthogon, (geom.) rectangular fig., e.g., *Orthogonal Projection*.

Orthography, correct spellg. accord. to com. usage.

Orthopaedics, study of deformity and malformation of bones, joints, and muscles, and of their treatment.

Orthoptera, order of insects with biting mouthparts and incomplete metamorphosis; including the cockroaches, stick and leaf insects, grasshoppers, crickets, and mantids.

Ortolan, small singing bird, allied to buntings (q.v.); migrant, spending summer in W. Europe, winter in Africa; frequents open wooded country, feeding on insects and small seeds.

Oruro, 1) dept., Bolivia; 21,000 sq.m.; pop., 138,000; tin, copper, silver. 2) Cap. of dept.; pop., 34,000; gold mines; rly. centre.

Orvieto, tn. in Perugia, It.; pop., 20,000. Gothic cathedral.

Orwell, riv., Suffolk; rises nr. Stowmarket as *Riv. Gipping* (11½ m.); becomes Riv. Or-

Dohbomori, a main thoroughfare in Osaka

well (11 m.) at Ipswich; flows into estuary of Riv. Stour betw. Felixstowe and Harwich.

Oryx, large African desert antelope, with long horns and tufted tail, of which gemsbok (q.v.) is a species.

Os (Lat.), 1) the mouth; 2) bone; 3) (chem.) symbol of osmium.

Osage Dam, Missouri, U.S.A., 148 ft. high; storage capacity: 500,000 mill. galls. (1931); power-generating.

Osaka, city, Japan, on Bay of Osaka, S. coast of Hondo; second city and most important commercial centre of Japan; iron-

works, shipyards, cotton mills; pop., 2,200,000.

Oscar, Kgs. of Sweden and Norway: 1) **O. I** (1799-1859), s. of Gen. Bernadotte; Kg., 1844. 2) **O. II** (1829-1907), s. of 1); kg., 1872; acquiesced in separation of Norway, 1905.

Osci, centr. Ital. people, conquered by Rom. **Oscan**, their language; extinct in early Rom. times.

Oscillation, regular swinging movement of a body round a zero position, e.g. pendulum; maximum departure from zero position is called the *amplitude*. Time between successive identical positions and movements is called *period of oscillation*; no. of complete oscillations p. sec., *frequency* measured in *Hertz* units (*q.v.*). Division into *longitudinal (q.v.)*, *transverse (q.v.)*, oscillations. When energy is used or dissipated, e.g., by friction, emission of waves, *damping* occurs, and amplitude decreases; where sufficient energy is supplied amplitude remains constant (undamped O.). Os. propagated in space are known as *waves (q.v.)*. *Electrically oscillating circuit*, as in wireless, contains capacity and self-induction (*q.v.*), period is determined by relation betw. these. If aerial forms part of circuit, energy is radiated away. Os. maintained by valve (*q.v.*). See also **RESONANCE**.

Oscillograph, device for recording rapidly changing electric currents; a galvanometer (*q.v.*) with very rapid response. Also *cathode ray (q.v.) O.*, in which magnetic effect of current on cathode ray beam is made use of; employed in television reception.

Osier, name given to several trees of willow family, esp. those cultivated for basket-making; native to Europe and N. Asia; silvery leaves and yellow catkins.

Osijek, fortified tn., Yugoslavia, on Riv. Drave; pop., 34,500; corn trade; silk, cotton, leather. Former cap. of Slavonia.

Osiris, (Egypt. myth.) god of the dead, orig. Kg. of Egypt; consort of Isis (*q.v.*). Dethroned, murdered, and dismembered by his brother, Set. Isis eventually found the remains of Osiris and, with the help of her son, Horus, defeated Set and regained the kingdom.

O si sic omnia (Lat.), Oh, if only [he had said, or done] everything thus; of person who has sd. or done something well once only.

Oslo (*Christiania* until 1924), cap. of Norway, at head of Oslo Fjord; pop., 258,000; cathed., royal palace and park, parliament house (*Storting*, *Bygning*), supreme law courts, univ. (1811), nat. theatre, museums; harbour (ice-bound in winter); docks; shipping and trading centre of Norway.

Osmanli, Turk. dynast., fndd. by **Osman I** (1259-1326). **Osman Pasha** (1832-1900), Turk. field-marshal; siege of Plevna, 1877.

Osmium, (chem.) sym. Os, at. wt. 190.8, sp. gr. 22.48; rare element found with iridium (*q.v.*) in platinum ore; bluish-grey, brittle substance with m.p. 2700°C.; on acc. of its extreme hardness used as constituent of tips of fountain-pen nibs.

Osmosis, (chem.) or *Osmose*, process by wh. liquids pass through membranes (e.g., parchment) under influence of molecular forces. If solution of sugar in water be separated from pure water by a *semi-permeable membrane*, i.e., one through which sugar cannot pass, water flows through membrane into sugar solution; pressure required to prevent this flow is called the *osmotic pressure* of the sugar solution, and is approx. equal to pressure of gas having same number of molecules per unit volume as sugar in solution. O. is fundamental in

Osmosis

all living organisms, which consist of cells enclosed in membranes. *Electro-osmosis*, passage of liquid through finely porous diaphragm or membrane when liquid on two sides is subjected to difference of electric potential (*q.v.*); also movement of fine particles of suspended solid or liquid in liquid under application of electric force (two phenomena are fundamentally identical). Important technical applications: deposition of suspensions of clay, rubber (*latex*), abrasives, etc., on metal electrodes; removal of suspended water particles in oils. The movement of particles is called *kata-phoresis*.

Osnabrück, cap. dist. of O. (2,395 sq.m.; pop., 430,000), in prov. of Hanover, Prussia; pop., 95,200; mediaeval church and town hall; industrial centre. Peace of Westphalia signed here, 24 Oct., 1648.

Osprey: see **EGRET**.

lowing machine to remove dirt and break up; next process is boiling, to remove chemical impurities and foreign matter; when this is complete the result—technically known as “half-stuff”—is bleached and still further broken (the fibres being thoroughly separated and reduced in size), and “loading” with mineral clay and colouring takes place. The material, now technically “pulp,” is run into vats into wh. is dipped a wooden mould with a wire cloth stretched across, on which fits a movable deckle. The mould, when lifted, retains a definite quantity of pulp wh., when surplus water is drained, forms a moist sheet of paper. This is placed on a damp felt; the process is repeated until a pile of alternate sheets and felts is formed; these are pressed, then separated, pressed again, and finally sized, dried, and glazed.

2) *Machine manufacture:* At beginning of last century Fourdrinier introduced into England a mach. for paper-making wh., with var. improvmts., has revolutionised

the process. Half-stuff, in an agitated state, is ejected on to an endless travelling cloth composed of wire of very fine mesh through which surplus water drains. At end of this cloth the fibres become in reality a continuous sheet of wet paper. This is passed over a couch roll and, alternately, over and under drying cylinders of progressive temperature, thus drying paper, which is then run on to reels or cut into sheets.

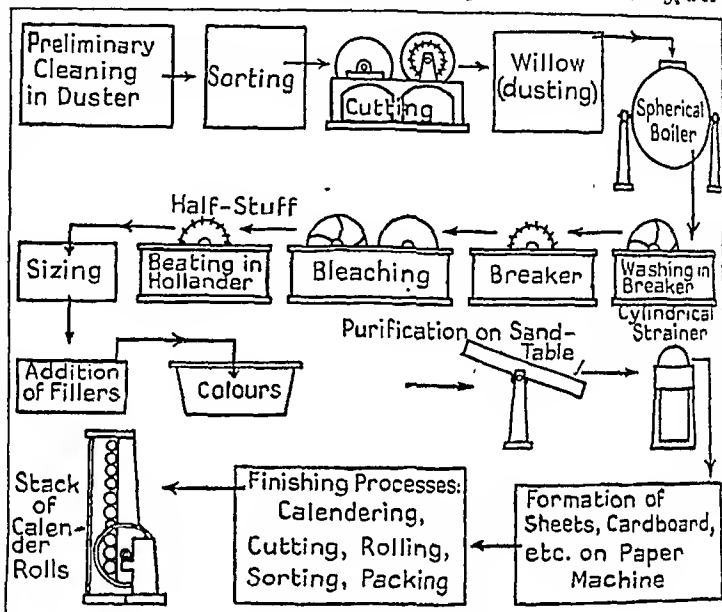

MATERIALS: Increasing demands for printing papers has caused a search to be made for other materials; wood has proved the most useful. Trees reduced to pulp either by crushing or boiling and, as pulp, transported to the paper mills throughout the world. Esparto (coarse grass grown in Spain and Africa) is another important discovery. The leaf is plucked and baled as pulled. Other common materials used in papermaking include straw, jute, hemp, and manilla hemp.

Ordering: Paper is bought by the ream, con-

sisting of 480, 500, or 516 sheets. It is usually sold at a given price per pound, according to quality, the total ream prices being governed by the number of pounds weight to the ream.

Pfefferkorn, Jakob (1469–1521), baptised Jew, demanded destruction of all Hebrew writings. Opposed by Reuchlin (q.v.).

Pfennig, obsolete German coin, one-hundredth of a mark (q.v.); par value 0.117 penny (0.237 cents); silver 50-pfennig coin in circulation.

Pforzheim, tn. in Baden, Ger., on Riv. Enz; pop., 80,400; principal centre of Germany's gold and silversmith industry.

P_H (phys.) symbol for the concentration of hydrogen ions (q.v.), in an aqueous solution. It is stated as log. of reciprocal

Petunia

of actual concentration, so that $P_H = 6$ means an actual hydrogen ion concentration ($1/1,000,000$ gram atom per litre). P_H of pure water is $c. 7$; solutions less than this are acid, more than this alkaline. Now of great importance in medical work (P_H of blood), food preservation (corrosion of tins), agriculture (acid and alkaline soils). Measured by hydrogen electrode, or some equivalent, e.g., quinhydrone electrode.

Phaeacians, in Homer's *Odyssey*, inhab. of Scheria, hospitable to Odysseus (Ulysses).

Phaedo, Plato's (*q.v.*) dialogue on immortality, in form of conversatn. with his friend Phaedo.

Phaedra (Gr. myth.) wife of Theseus; in love with her stepson, Hippolytus.

Phaedrus, Rom. fabulist, 1st cent. B.C.

Phaestus, (anc. geogr.) Minoan city on S. coast of Crete; remains of great palace (*c.* 1800 B.C.); smaller and later palace at Hagia Triada, near by. Excavated by Sir Arthur Evans, 1908.

Phaethon, son of Helios; killed by Zeus while trying to drive the chariot of the Sun.

Phaëton, open car or four-wheeled carriage with adjustable hood.

Phagocytosis, (physiol.) property of white blood corpuscles of enveloping and digesting foreign bodies, e.g., bacteria, and rendering them harmless. Discvd. by Mechnikoff (*q.v.*).

Phalange, 1) (anat.) single bone of finger or toe (usually in plural). 2) (bot.) Bundle of stamens joined by their filaments.

Phalanger, fam. of marsupial mammals fnd. in Australian regions, small or medium-sized, thick-coated and gen. long-tailed; incl. koala, cuscus, and several so-called opossums.

Phalanx (Gr.), 1) heavy infantry in order of battle, specif. battalion of Macedonian troops drawn up in close order. 2) (Anat. and bot.) a phalange (*q.v.*).

Phalarope, bird of plover fam., frequenting coasts and lakes, with soft plumage and lobulated toes.

Phaleron Bay, inlet, Gulf of Aegina, 4 m. S. of Athens, Greece; orig. roadstead of Athens before fndn. of the Piraeus (*q.v.*); now a seaplane base. **Old and New P.**, S. suburbs of Athens, on Bay of P.; sea-bathing.

Phallus, male genital organ as a symbol of fertility in nature. *Phallic worship* is found in almost all religions of antiquity.

Phanariotes, inhab. of Gr. quarter (Phanar) in Constantinople.

Phanerogams, flowering, seed-bearing plants; ant.: *cryptogams* (*q.v.*).

Phantasm, figment of imagination, misleadg. picture. **Phantasmagoria**, series of phantasms. **Phantom**, vision, creation of a morbid imagination; spectre, ghost.

Pharaoh (O.T.), designation of anc. kgs. of Egypt. **P.'s Daughter**, preserver of Moses (Exod. ii.); tradit. named Merrihis. **P.'s serpents**: see **THIOCYANATES**.

Pharisees (Hebr., Separatists), Jew. relig. party (from *c.* 120 B.C.); scrupulous observers of the religious traditions of the Mosaic Laws; represented the Puritanical element as against the Sadducees (*q.v.*). Term now applied to a hypocritical or over-righteous person.

Pharmaceutist, **pharmacist**, one skilled in the preparation of drugs and the dispensing of medicines. **Pharmacology**, science of the nature and actions of drugs. **Pharmacopoeia**, book of official standards of doses, formulas, and methods used in preparation of drugs. **Pharmacy**, art and science of preparing drugs and medicines, also the place in wh. they are prepared or sold.

Pharos, penins. forming W. extremity of Alexandria, Egy.; site of the white marble lighthouse, Pharos, one of the seven wonders of the world, built by Ptolemy I and II, *c.* 260 B.C.

Pharsalus, anc. tn. in Thessaly. Scene of decisive defeat of Pompey by Caesar, 48 B.C.

Pharynx, (physiol.) back wall of nose and mouth cavity. **Pharyngeal catarrh**, inflammation of P. caused thr. taking cold.

Phase, particular point or state in any periodically recurring phenomenon, e.g., the phase of the moon. In all vibration or oscillation, e.g., alternating electric current, phase is defined by angle, 360° being duration of complete oscillation. Hence one of two oscillations of equal period said to be so many degrees in advance of, or behind, the other. Important relation between phase of alternating electromotive force (voltage) and phase of current produced by it (*power factor*).

Ph. D., abbr. *Philosophiae Doctor* (Lat.), Doctor of Philosophy.

Pheasant, gallinaceous bird of the subfamily *Phasianidae*, wh. includes the most widely distributed and gorgeously plumaged of the game-birds; fnd. throughout Europe, Asia, Malaya, Africa, and Centr. America. Bred in Gt. Brit. for

Phaëton

Reconstruction of Pharos Lighthouse

Chinese Pheasant

shooting. In all species it is the cock bird that assumes the resplendent plumage. The argus, golden, and Amherst pheasants are specially remarkable for their gorgeous courtship displays. **P.-shooting**, birds generally driven by beaters to guns standing outside covert. Season: Oct. 1st.-Jan. 31st. **P.'s-eye**, *Adonis autumnalis*, member of the ranunculus family; bright red flowers.

Phenacetin, synthetic drug derived from coal-tar; used to relieve headache, neuralgic, and rheumatic pains.

Phenols, (chem.) hydroxy-benzols, organic aromatic compounds occur in coal, lignite, and wood tars and in plants such as thyme. Carbolic acid (phenol, C_6H_5OH) most important. Used in manuf. of dye-stuffs, medicines, explosives, and synth. resins and for preserving woods. Ps are strong antiseptics, one of the most active being carvacol.

Phenomenon, that wh. is manifest to the senses, contrasted with its non-manifest cause or ground. **Phenomenalism**, doctrine that the mind cannot penetrate to what lies behind phenomena; see AGNOSTICISM. **Phenomenology**, inquiry into nature of P.; study of the relations of space and time with objects of sense (Kant).

Phidias, Gr. sculptor of 5th cent. B.C.; ivory and gold statue of Zeus at Olympia (one of the Seven Wonders of the World) and of Athena in the Parthenon at Athens (Athena Parthenos).

Phil-, philo-, Gr. prefix (as suffix, *-phile*) meaning friend of: e.g., Philhellenic, friendly to the Greeks; Anglophile, friend of England.

Philadelphia, cap., Pennsylvania, U.S.A., pop., 2,000,000; Atlantic port; cathed., univ. (1740), acad. of art; manuf. rolling stock, textiles; shipbuilding. Declaration of Independence, 4 July, 1776.

Egyptian Temple at Philae

Philae, islet in Riv. Nile, above Assuan, Egy.; ruins of Temple of Isis; flooded annually by Assuan Dam.

Philately, study and collection of postage stamps.

Philemon, **Epistle to** (N.T.), letter entrusted by St. Paul (*q.v.*) to the slave, Onesimus, for delivery to latter's master, Philemon.

Philemon and Baucis (Gr. myth.), happy old couple to whom Zeus granted a simultaneous death (*Ovid*).

Philharmonic (Gr.), music-loving, e.g.: *P. Orchestra*; *P. Society*.

Philhellenes, *i.e.*, "friends of the Greeks," foreign supporters of Greece in her insurrection agst. Turk. sovereignty, 1821-29.

Philidor, pseudon. of François André Danican (1726-95), Fr.-Eng. musician, com-

poser (operas, *Tom Jones*, etc.), and famous chess master.

Philip, 1) (N.T.) a) one of 12 Apostles, native of Bethsaida in Galilee; prev. disciple of John the Baptist. b) P. surnamed the Evangelist; conversation with Ethiopian eunuch (Acts viii). See also HEROD 3). b) Kgs. of Macedonia: **P. II** (382-336 B.C.), Kg., 359; father of Alexander the Great; defeated Greeks at Chaeronea, 338. **P. V** (238-179 B.C.), Kg., 220; defeated by Romans under Flamininus at Cynoscephalae, 197.

3) Kgs. of France: **P. I** (1053-1060-1108), s. of Henry I. **P. II**, Philippe - Auguste (1165-1180-1223), joined Richard I of Eng. in Third Crusade, 1189. **P. III**, the Bold (1245-1270-1285), s. of Louis IX. **P. IV**, the Fair (1268-1285-1314), transfd. papacy to Avignon, 1309; supprsd. Order of Knights Templars, 1312. **P. V**, the Tall (1293-1316-1322), s. of P. IV. **P. VI** (1293-1328-1350), 1st Valois kg.; began Hundred Years' War with Eng., 1339-1453.

Philip II of Spain

4) Span. kgs.: **P. I**, the Handsome (1478-1506), Kg. of the Netherlands, 1494, of Castile, 1504. **P. II** (1527-98), Kg. of Spain, 1556; s. of Emp. Charles V, who entrusted him with govt. of the Netherlands. On Charles's abdication (1554) P. acquired, in addition, Spain and Span. America, Naples and Sicily, Franche-Comté, and duchy of Milan; m. Qn. Mary of England, 1554. His polit. and relig. oppression of Netherlands provoked revolt, which ended in estab. of Dut. Republic. Sent Span. Armada agst. England, 1588.

P. III (1578-1598-1621), s. of P. II. **P. IV** (1605-1621-1665), s. of P. III. **P. V** (1683-1700-1746), g.-s. of Louis XIV of France; accession caused War of Spanish Succession (*q.v.*). 5) Ger. Kg.: Duke of Swabia (1195-1208), youngest s. of Frederick I, Barbarossa; rival of Emp. Otto IV. 6) Dukes of Burgundy: **P.**, the Bold (1342-1404), s. of John II of France, created Duke of Burgundy, 1363; regent for Charles VI of France. **P.**, the Good (1396-1467), succeeded, 1419; signed Treaty of Troyes (1420) as regent of France; inherited Netherlands. 7) Dukes of Orleans: see ORLÉANS. 8) Landgrove of Hesse (1504-67); ardent Protestant; introd. Reformation into Hesse; a fndr. of League of Schmalkalden; imprisoned by Emp. Charles V.

Philippeville, seapt., dept. Constantine, Algeria; pop., 47,800; port of Constantine.

Philippi, former city of Macedonia, 75 m. E.N.E. Salonica. Victory of Octavius over

Brutus and Cassius, 42 B.C. Christian Church fndd. by St. Paul.

Philippians, Epistle to the (N.T.), written by Paul during imprisonment in Rome (c. 63 A.D.) to Christian congregation in Philippi (scene of St. Paul's first preaching in Europe).

Philippic, passionately aggressive speech, after speeches of Demosthenes against Philip II of Macedon.

Philippine Islands, archipelago, N.E. of Borneo; 115,000 sq.m.; pop., 12,204,100; mountainous; volcanic; highest peak, *Mt. Apo* (9,600 ft.) on Mindanao Isl.; gold, silver, copper, coal, iron; sugar, hemp, tobacco, coconuts; timber; largest isl. Luzon (40,800 sq.m.) on N., on which is cap., Manila; group comprises 7,085 isls. of which 2,400 are named. Disc. by Magellan, 1521; named after Philip II of Spain; U.S.A. possession since 1898.

Philippopolis, Plovdiv, tn., Bulgaria, cap. of prov. P. (3,830 sq.m.; pop., 560,021), on Riv. Maritza; pop., 84,655; metal industry.

Philistine, (O.T.) partly Semitic people, neighbours of the Israelites: chief cities, Ashdod, Ascalon, Gath, Gaza; partially subjugated by Saul and David. (Fig.) One who, in the opinion of the cultured, is uncultured. **Philistinism**, term, coined by Matthew Arnold (q.v.), implying lack of sympathy with lit. and fine arts, lack of culture coupled with self-satisfied unconsciousness of deficiency.

Phillips, Stephen (1866-1915), Brit. poet and playwright; *Eremus*, 1894; *Poems*, 1897; plays: *Paolo and Francesca*, 1900; *Ulysses*, 1902; *Nero*, 1906.

Phillipotts, Eden (1862-), Brit. novelist, playwright, and poet; novels: *The Human Boy*, 1899; *The Angle of Seventeen*, 1912; plays: *The Farmer's Wife*, 1917; *Yellow Sands*, 1926; poems: *The Iscariot*, 1912; *Brother Beast*, 1928.

Philo, Jewish-Hellenistic philosopher in Alexandria (c. B.C. 20-A.D. 54), united Greek and Jewish philosophy, forerunner of Neo-Platonism.

Philoctetes, Gr. legendary hero, inherited the bow and arrows of Hercules; abandoned for ten years on Lemnos with a poisoned wound, on way to the Trojan War; eventually reached Troy and killed Paris (q.v.).

Philology, science of language; study of etymology, grammar, rhetoric and literary criticism. **Comparative philology**, study of languages by comparison of history, forms, and relationship with each other.

Phiomela, (Gr. myth.) dau. of Pandion, Kg. of Athens; having been dishonoured by Tereus, Kg. of Thrace, she was changed into a nightingale.

Philosopher (Gr. "lover of wisdom"), one who studies (or practises) the right way of living and seeks to apprehend the nature of reality. **P.'s stone**, substance hypothesized and sought after in alchemy (q.v.); said to possess property of turning all substances into gold and of healing all diseases; see **ELIXIR**.

Philosophy, science of science, and the foundations of knowledge, of the root causes of all Being, Happening, and Knowledge; investigates in partic. the possibilities of knowledge, the ways, bases, laws, and forms of thought and perception, as well as the forms of consciousness. Operates by reason and experience. Chief branches: *Logic, Epistemology, Metaphysics, Ethics, Science of Values, Aesthetics, Social Philosophy*.

HISTORY: *Earliest*, that of Egy., India, Babylon; closely associated with religion and theology (priestcraft, magic, astrology).

Chinese p. (greatest period 600-500 B.C., Confucius, Lao-tse), no influence on Western P. **Greek p.**, rational reaction agst. popular religion. 1) *Ionian School* (Thales, Anaximander, Anaximenes), see **HYLOZOISM**; ended with Persian conquest of Ionia. 2) *Pythagoras* (q.v.). 3) *Eleatic School* (q.v.). 4) *Greatest period of Gr. P.*: Sophists, Socrates, Cyrenaics, Cynics, Plato, Aristotle. 5) *Later ancient P.*: Epicurus (Hedonism); Zeno (Stoics); Carneades (Sceptics); Philo (Neo-Platonists); Cicero (Eclectics); ancient P. ended A.D. 529 with closing of school of P. by the Emperor Justinian. **Medieval p.**, ant. of Gr. P.; dominated by popular religion.

1) *Christian Theologians* (Patristic period), cf. Augustine. 2) *Arabian P.*: Avicenna, Averroes. See also **JEWISH P.** 3) *Scholasticism* (q.v.). **Modern p.**, 1) Transitional break away from subordination to eccles. authority (Paracelsus, 1493-1541; Montaigne, 1533-92); growth of scient. spirit (Copernicus, Galileo, Newton, Harvey); Francis Bacon 1561-1626. 2) Descartes, 1596-1650, father of mod. P.; Hobbes, 1588-1679. See **SENSUALISM**. Spinoza, 1632-77, 1st. compl. rationalistic system of mod. P.; Leibnitz, 1646-1716, idealistic monism. 3) Locke, 1632-1704, applied epistemology to mod. P.; Berkeley (pure Idealism); Hume (Scepticism. 4) Kant, 1724-1804, idealistic criticism basis of all sub. epistemology; Fichte, Schelling (romantic natural P.); Hegel, founder of logical Idealism, closely relating P. with politics and history. 5) Tendency twds. *Materialism* c. middle of 19th cent.; Schopenhauer, 1788-1860, P. of pessimism, identified ultimate reality with irrational will; Nietzsche, 1844-1900; Wundt, 1832-1921; Neo-Kantians. 6) *Positivism and Evolutionism*; Comte, 1798-1857; J. S. Mill, 1806-73; H. Spencer, 1820-1903. 7) *Recent and Contemporary P.*; Neo-Hegelians and revolt agst. empiricism (Green, Bradley, Bosanquet,

Haldane, McTaggart); *Pragmatism*; Wm. James, Bergson, Croce; Alexander (*Space, Time, and Deity*, 1928), embodying new conceptions of space-time. See RELATIVITY.

Philosophy, Indian, developed first in the *Vedas* and *Upanishads* (q.v.) in wh. philos. speculation is mingled with religious teaching; in 6th and 5th cents. B.C., rise of *Buddhism* and *Jainism* considerably affected development of ethics and tended towards materialist standpoint; later six great philos. systems took shape: *Nyaya*, concerned princ. with problem of Knowledge; *Vaisesika*, teaching individuality of particulars; *Samkhya*, reality of matter and of individual souls; *Yoga*, emphasising mental concentration and quietism; *Purva Mimamsa*, concerned with duty; and *Vedanta*, which seeks to interpret the *Upanishads* in various ways, and comprises var. systems, esp. those of Samkara, Ramanuja, and Madhva; Indian phil. generally impregnated with belief that the visible world is illusion (*Maya*) and with the doctrine of transmigration of souls (q.v.).

Philosophy, Jewish, arose, after the dispersion, in attempts to interpret Jewish religion to Gentile world in wh. Jews were scattered, esp. at Alexandria, where Jews first encountered Greek philos. (see PHILO); then little distinctively J. Philos. until 9th and 10th cents., when under influence of Arab thinkers Neo-Platonist teachings influenced writings of Solomon ibn Gabirol (1021-58), Jehuda Halevi, etc.; later an Aristotelian movement influenced Moses Maimonides (1135-1204), opposed by the anti-rationalist Hasdai Crescas (1340-1410); in 15th cent. after Joseph Albo (1380-1444) Jewish P. declined, though many later philosophers (e.g., Spinoza) were Jews by race; princ. tasks of Jewish P. were to explain relation of revelation to reason, and nature and attributes of God.

Phimosis, (med.) contraction of the foreskin (q.v.).

Phiz: see BROWNE, HABLÔT KNIGHT.

Phlebitis, inflammation of a vein; usu. applied to any of two larger veins of the leg.

Phlebotomy, obsolete method of purifying the blood of poison, bad matter, etc., by opening a vein.

Phlegrean Fields, volcanic region on N. shore of Gulf of Naples, containing cave of the Sibyl.

Phlogiston, (phys.) hypothetical substance formerly supposed to be present in all combustibles, disappearing on combustion.

Phlogistic Theory, (Stahl early 18th cent.) refuted by Lavoisier's explanation of combustion as oxidation.

Phlebotomy

Phlox, handsome garden plant with red, white, purple, or variegated flowers; originally imptd. from Texas.

-phobe, Gr. suffix, meaning fearing or disliking: e.g., Anglophobe, one who fears or dislikes England and the English.

Phobos, inner of the 2 satellites of Mars (q.v.).

Phocaea, anc. Ionian city on W. coast, Asia Minor, 28 m. N.W. Smyrna; its people fndd. many colonies, incl. Massilia (Marseilles).

Phoebus, epithet of Apollo (q.v.).

Phoenicia, (anc. geogr.) portion of Syrian seaboard betw. Mt. Lebanon (N.) and Mt. Carmel (S.), inhab. by Phoenicians (q.v.). Its cities included Tyre, Sidon, Byblos, Beirut, Acire. Conquered by Egyptians, 16th cent. B.C.; indept. 10th-9th cents.; under Assyrians, 876-605; later under Chaldaeans, Persians, and Macedonians; incl. in Rom. prov. of Syria, 64 B.C.

Phoenician: see LANGUAGE SURVEY, W. Semitic.

Phoenicians, Semitic merchant race inhabiting Phoenicia (q.v.). Famous seafarers, fndd. harbours and colonies as far as Atlantic coast. Dyeing (Tyrian purple) and glass manufacture.

Phoenix, cap. Arizona, U.S.A.; on Salt Riv.; pop., 48,100; health resort; cotton; fruit, vegetables.

Phoenix, 1) fabulous bird supposed to have lived in Arabian desert in cycles of 500 yrs., at end of each of wh. it burned itself and rose again from its own ashes with renewed youth and beauty. 2) (Astron.) Starn. constellation. See PL., ASTRONOMY, S.C.H., H.

Phonetics, science of sounds, esp. of human voice. *Phonetic spelling*, acc. to sound and not to derivation.

Phonograph, apparatus for reception and reproduction of acoustic waves (sounds) invtd. by Edison (1877); forerunner of gramophone (q.v.). Sounds registered on wax cylinder.

Phonology (Gr.), science of sounds of speech; study of changes occurring in a language in course of time.

Phosgene, (chem.) carbonyl chloride; sym. COCl₂; colourless, very poisonous gas, with sharp smell; used in World War; formed by direct combination of carbon monoxide and chlorine (q.v.), or by decomposition of chloroform.

Phosphates, (chem.) compounds of bases with phosphoric acid, e.g., iron P.; used in "chemical food" as a tonic; superphosphate contains soluble acid P. of lime; used as a fertiliser.

Phosphorescence, emission of light without heat; also property of some mineral substances (e.g., phosphorus, zinc sulphide) of shining in the dark after exposure to light.

Marine P., phenomenon caused by emission of light by minute marine organisms (*flagellata*), seen esp. in Tropics. See LUMINESCENCE.

Phosphorus, non-metallic chem. element, sym. P; at. wt. 31.02; occurs naturally as calcium phosphite (*sombrerite*) and with fluorine (*apatite*), also in bones. *Yellow P.*, sp. gr. 1.83, very poisonous; occurs as yellowish-white, wax-like substance, wh. glows and burns on exposure to air; must therefore be kept under water. Used in rat poisons and to slight extent in med. as a tonic (see ANTIDOTES). *Red P.*, sp. gr. 2.2, non-poisonous; used in manuf. of matches. *Phosphor-brance* contains 1% P. with copper and tin; used for engine bearings.

Photius (c. 820-898), Gr. theolog.; Patriarch of Constantinople; promoted separation of Gr. from Rom. Church. *Bibliaheca*, notes on lost Gr. texts.

Photocatalysis: see PHOTOCHEMISTRY.

Photochemistry, deals with effect of light upon chemical action, wh. it may cause, accelerate (*photocatalysis*), or reverse. Fundamental: Einstein's "Law of Photochemical Equivalence," that for each quantum of radiation absorbed, one molecule is chemically transformed.

Photo-electric cells, photo-cells the electr. characteristics of which are changed by exposure to light enabling electrical currents to be varied by the action of light; a) elec. resistance of certain substances (selenium, antimonite, thallium compounds, etc.) alters when they are exposed to light; b) negative electrons are released by light from metals; cells are made by enclosing these in evacuated glass bulbs with electrodes (alkali cells), photo-cells in restricted sense; c) action of light on junction of metals with solid conducting compounds, e.g., copper oxide, prod. current. Small elec. effects are usu. *amplified by valves* (q.v.). Used in reprod. sound from film, for transm. in television, for photometry (q.v.), etc. See also SELENIUM CELL.

Photo-electric effect, (phys.) liberation of electrons from surface of metal when struck by light, esp. in alkali metals. Internal P.E. in selenium, release of electrons resulting in grt. decrease in its resistce. under action of light.

Photo-engraving, general term applied to printing (illustrations, etc.) by chemical and photographic means. See LINE BLOCKS; HALF-TONE PROCESS; THREE-COLOUR PROCESS.

Photography, production of images of objects by action of light on sensitive substances. Picture of object is formed in camera (orig. *camera obscura*, q.v.) by *objective* lens upon sensitive plate or film. *Objectives* of various kinds: aplanatic (rapid rectilinear) practically free from chromatic aberration (q.v.); anastigmat, in which astigmatism

(incorrect focusing of light rays falling on the lens at an angle) is corrected; double anastigmat, and triplet; telephoto, giving a magnified picture. Exposure by *shutters* of various kinds: roller-blind shutters, some with slit in blind which passes in front of plate (*focal-plane shutter*); lens shutters, leaves of metal worked by spring. Exposure may be varied from $\frac{1}{2}$ sec. to about 1/4,000th sec. *Plate or film* consists of glass or transparent cellulose compound coated with gelatine "emulsion," containing silver bromide in minute grains. Light produces invisible change in these, such that when film is afterwards bathed in reducing liquid (developer), black metallic silver is formed only where light has acted. Unchanged silver bromide is removed by *fixing-bath*, leaving transparent gelatine with negative image in minute grains of silver, black where light parts of picture should be. *Positive print* made from this by placing in contact with sensitive paper and exposing to light; nearly all prints made on "gas-light" or "bromide" paper, with similar coating to plates and films, and are developed and fixed. For artistic work carbon, bromoil, and gum-bichromate processes (q.v.) are used. Colour of prints changed by *toning* (q.v.). Camera is usually provided with *finder* (for hand-camera) or focusing screen. Mirror reflex camera allows picture to be seen on focusing screen up to moment of exposure. Plate or film is shielded from light by mirror inside camera, which diverts light to focusing screen; mirror is then moved aside just before exposure. Glass plates coated with gelatin emulsion used for best work; otherwise coated film of cellulose compound (acetate, nitrate) in form of *roll* or *pack*. For cinematography cellulose nitrate (celluloid) film is used for professional work; very dangerous and inflammable, but cheaper and less subject to uncertain change in size. For amateur work "non-flam" film, or cellulose acetate, is used. Standard film is 35 mm. wide; amateur, 16 mm. and 9.5 mm. See PL., CAMERA; CINEMATOGRAPHY; COLOUR PHOTOGRAPHY, and separate headings.

Photogravure, an intaglio photographic printing process resembling aquatint. A resinous ground to form a grain is laid on a smooth copper plate which is fixed by heat. A carbon tissue tone negative is pressed to this, forming a "resist" to an etching fluid which erodes the unprotected copper and causes the picture to be sunk in the plate in depths varying according to the tones. After *inking*, the surface is cleaned and paper rolled over the plate with sufficient pressure to take the ink from the sunken portions. See also ROTARY PHOTOGRAVURE.

Photo-lithography, process by which a phot. made on or transferred to stone or zinc is printed off.

Photometer, (phys.) apparatus for measuring the illuminating power of a source of light. **Photometry**, the science of light-measurement. Unit of intensity: *International candle* (Gt. Brit., France, U.S.A.). Unit of luminous flux, the *lumen*, emitted by 1 internat. candle into unit solid angle. Unit of illumtn., the *lux* or 1 lumen per sq. metre. Brit. Unit foot-candle, or 1 lumen per sq. ft. = 10.76 metre-candles. Measurement by *photometers* on many different principles: Bunsen grease-spot, shadow, flicker, photo-electric, polarimetric.

Photo-micrography, photog. of very small objects by an apparatus consisting of microscope attached to a camera. Recently great improvement effected by use of *ultra-violet radiation* (*q.v.*), enabling much finer structure to be photographed than the eye can see.

Photon, modern name for light-corpuscle, existence of wh. is establd. by Compton, and Photo-electric effects (*q.v.*), where wave-theory (*q.v.*) fails. Mass in grams $2.19 \times 10^{-38} \times$ wave length in centimetres.

Photosphere, the incandescent envelope surrounding the sun.

Photostat, camera designed to reproduce drawings, documents, printed pages, etc.; makes negative print (white on black) directly on a bromide paper; copy of negative print made in same way gives positive print; also a facsimile so produced.

Photo-telegraphy, transmission of pictures by wire or wireless (perfected by A. Korn). Transparent print is wrapped round transp. cylinder, which is revolved exactly in step with similar cylinder covered with sensitive film at receiving end. Point of light is focused on film and passes thr. to light-sensitive (photo-electric or selenium, *q.v.*) cell, being diverted by prism inside cylinder. Point of light is travelled along by screw so that every point of picture is covered in turn. At every moment photo-electric cell adjusts strength of signal sent to receiving end, where it affects galvanometer, wh. modifies brightness of similar light-spot falling on sensitive paper, and travelling in step with light-spot at transmitting end. Each point of receiving-film thus exposed to light so as to reproduce depth of image at corresponding point at transmitting end.

Phototype, (printing) half-tone (*q.v.*) printing process in wh. a special screen is used.

Phrasing, (mus.) arrangement, joining or separating of musical passages.

Phrenology, pseudo-science, professing to find relationship betw. outlines of skull and mental and moral attributes.

Phrygia, (anc. geogr.) country, Asia Minor, of varying extent; in narrowest sense an inland table-land (over 3,000 ft.) lying

betw. rivs. Sangarius (Sakaria; N.E.), Ille-mus (W.), and Maeander (S.); in widest sense the whole of N.W. Asia Minor. Phrygians migrated into Asia Minor c. 1500 B.C., displacing the Hittites; after 1000 B.C. (zenith of their power) they lost W. shell or metal for plucking stringed instruments.

Plehve, Viacheslav. Konstantinovich (1846-1904), Russ. statesm.; supporter of tsarist autocracy; assassinated.

Pleiad, name given to group (see next article) of 7 particularly brilliant persons, esp. to the poets at the court of Henry III of France—Ronsard, Du Bellay, Remi Belleau, Jodelle, Dorat, Baif, and Pontus de Thiard.

Plelades, 1) (astron.) close group of 6 conspicuous stars (traditionally 7), in constellation Taurus; largest of them, Alcyone. 2) (Gr. myth.) 7 daughters of Atlas, sisters of Hyades, named Alcyone, Merope, Celaeno, Electra, Sterope, Taygete, Maia.

Pleinairism, mod. school of art developed from impressionism (q.v.), according to which, to obtain true luminosity, a picture should be painted entirely in open air.

Pleistocene, the most recent geol. period; sometimes used as synonym for Diluvium, or *Glacial Period*; see GEOLOGICAL FORMATIONS.

Plekhanov, George Valentinovich (1857-1918), Russ. politic. and writer; fndd. Social Democratic party.

Plenary session, public session of a deliberative assembly, attended by all members.

Plenum, system of ventilation of buildings; consists in forcing air, generally "conditioned" (filtered, brought to right temperature and moisture), into building by means of electrically driven fans, suitable outlets being provided for escape of used air.

Pleochroism, property of certain crystals, which causes them to appear of different colours when viewed from different angles.

Pleonasm, fig. of speech containing a redundancy, as a noun accomp. by adj. of sim. meaning, e.g., *a wrong mistake*.

Plesiosaurus, marine reptile, found as fossil, of the Jurassic and Cretaceous epochs, up to 40 ft. long; very small brain, long neck, all 4 limbs furnished with paddles for swimming.

Pless, adminis. dist. (pop., 5,500), Upper Silesia; Polish since 1919.

Pleura, (physiol.) membrane lining inner wall of the chest and covering surface of lungs. **Pleural cavity**, (physiol.) potential space betw. the two layers of the pleura, the membrane covering the lungs. In health, the two layers are in contact. **Pleurisy**, inflammation of the pleura; *wet p.*, variety in wh. inflammation is accomp. by presence of fluid betw. the two layers of the pleura; *dry p.*, in wh. there is no fluid, characterized by severe stabbing pain in chest at end of each inspiration, caused by friction of the dry, inflamed surfaces of pleura.

Pleuronectoidae: see PLAICE.

Plevna, Plevén, tn. in dept. of P. (29,607 sq.m.; pop., 430,000), N.E. of Sofia, Bulgaria; pop., 29,000; weaving, tobacco industry.

Captured by Russians from Turks following five months' siege, 1877; Bulgarn. since 1878 (Treaty of Berlin).

Pliers, tool for holding and manipulating small objects; flat-nosed, pointed-nosed, cutting, etc.

Plimsoll,

Sam. (1824-98), Brit. politician. devoted to improvement of condition of seamen, and

advoc. of load-line reform; the **P. line**, mark on hull showing to what depth a vessel may legally be submerged when loaded; made compulsory. (Gr. Brit.) by Merch. Shipp. Act, 1876.

Plinth, (bldg.) pedestal; base of a pier or column; often used of a whole façade.

Pliny, Rom. authors: **P. the Elder** (Gaius Plinius Secundus), A.D. 23-79, killed in the eruption of Vesuvius; *Natural History*. His nephew, **P. the Younger** (Gaius Plinius Caecilius Secundus); c. 62-113; *Letters*.

Pliocene, uppermost strata of Tertiary period; see GEOLOGICAL FORMATIONS.

Ploegsteert, vill., W. Flanders, Belgium, on Fr. frontier, 3 m. N. of Armentières; adjoined by **P. Wood**; part of Brit. front line in World War; involved in battle of the Lys (9th-29th April, 1918). Brit. memorial to 11,449 missing.

Ploësti, tn., Rumania, 35 m. N. Bucharest; pop., 60,840; centre of oilfield; petroleum refineries.

Ploodry: see PHILIPPOLIS.

Plotinus (A.D. 205-270), Neo-Platonist philos. of Alexandria and Rome; *Enneads*. Doctrine of mysticism; expounded the method of ecstatic union of the Soul with the Absolute.

Plough, 1) agric. implement drawn by horses or oxen, now freqtly. driven by steam or petrol power; loosens soil and cuts furrows for seed-planting, by means of blades (coulters) either fixed or rotating. Where large areas are under cultivtn. (e.g., Canada, U.S.A.), **cable p.** is used, P. being hauled by cable across the land. **Disk p.**, with rotating discs instead of blades, is suitable for heavy ground. See AGRICULTURE. **Snow p.**, device for driving tracks through deep snow. 2) (Astron.): see URSA MAJOR.

Plover, small, shore-frequenting bird of the order *Charadriiformes*; numerous, widely distributed species. **Ringed p.** com-

mon on stretches of sand and shingle on British coasts. **Golden p.** found at all times of year in British Isles, breeding freely on the moors of N. England and Scotland.

Plug gauge, (tech.) instr. for checking internal diam. of holes. **Limit g.** with 2 ends slightly diff.; one must enter, the other not, if hole is correct within set limits.

Plum, tree of genus *Prunus*, bearing smooth, oval, edible fruit. Wild species native to S. Europe and Asia are the wild P. (*P. domestica*), bullace (*P. insititia*), and sloe or blackthorn (*P. spinosa*). Cultivated varieties include greengage, damson, and egg-plum. In S. Europe a large variety is dried and exported as *prunes*.

Plumbago, 1) mineral composed of carbon, iron, etc., used for pencils, crucibles, etc.; graphite, black-lead.

2) (Bot.) Genus of herbs with greyish-blue or violet flowers; leadwort.

Plumb-line, (math.) perpendicular from point *p* (see Illus.) dropped on a straight line AB for testing vertical position of something; small wt. of brass or lead on a thin thread suspended over a point (Illus. 2); also *plummet* (q.v.) used in building;

wooden triangle, the base of which is horizontal when working; also instrument for sounding, i.e., measuring the depth of water; *naulical lead* line with wt. (see Illus. 2); *Thomson line*

measures the water pressure (which increases with the depth). *Depth-sounder* (see Illus. 3), containing cavity underneath for picking up specimens of the bottom. *Echo-sounder*: (A. Behm), measures the time betw. the firing of a cartridge and the return of the echo which has been reflected back from the ground or sea-bottom; used in navigation and aviation.

Plumbum (Lat.), lead (q.v.).

Plume moth, a small moth with wings divided into feathery lobes.

Plumer of Messines, Herbert Charles Onslow P., 1st. bn. (1857-1932), Brit. F.-M.; commd. II Army, 1915 (Messines, 1917), and

Brit. troops in Italy, 1917; Gov. of Malta, 1919-25; High Commr., Palestine, 1925-28.

Plummet, sounding-lead; heavy, pointed weight suspended by cord, usu. in frame with fixed point, so placed that when point of weight hangs over it, frame is exactly vertical. Used in erecting buildings, machinery plant, etc. Also fixed to instruments such as fine balances to assist levelling.

Plunge, (natat.) standing dive made with obj. of moving as far as poss. on surface without raising face from water.

Plunkett, Sir Horace Curzon (1854-1932), Irish writer and agriculturist; promoter of agric. co-operation fr. 1889; M.P., 1892-1900; chairm. of Irish convention to enquire into relations with Eng., 1917-18; fndd. *Horace Plunkett Foundation* for promotion of agric. developmt., 1919; Senator, Irish Free State, 1922-23.

Pluperfect, tense of verb indicating completed action in past time, e.g.: *he had laughed*.

Pluralism, theory that explanation of the world requires assumption of sev. independent substances wh. cannot be reduced to any single principle; see MONISM; DUALISM.

Plural voting, system according to certain electors extra votes for income, properties, etc., or other priv., e.g.: vote for business premises or univ. in addtn. to residence, under Representation of the People Act, 1918) **P. v. shares**, preference shares (q.v.), holders of wh. have plural voting rights, usu. with limited dividends.

Plus (Lat.: more), (math.) the sign of addition (+) and the description of positive numbers as against negative (-). **P. sign** in quotations of a stk. exch. shows that shares so marked have risen in price.

Plush, silk or cotton cloth, like velvet but with longer and more open pile.

Plutarch (A.D. 46-120), Gr. author; 46 *Parallel Lives*, biographies of Gr. and Rom. notabilities in pairs.

Pluto, 1) (Gr. and Rom. myth.) god of underworld. 2) (Astron.) The 9th planet, discovered Feb., 1930; see Table: PLANETS.

Plutocracy, rule by the wealthy, or by means of big capital.

Plutonism, theory that geological phenomena are, in the main, attributable to volcanic action.

Plutus, Gr. god of Riches.

Pluvial Age, term used to denote a phase of the later Tertiary Period (see GEOLOGICAL FORMATIONS) in wh., owing to the formation of such great condensers as the Caucasus, Carpathians, and Alps, heavy rains became general over large areas of earth's surface.

Pluviometer: see RAIN-GAUGE.

Pluviöse, Jan. 20th-Feb. 18th in Fr. Repub. Calendar (q.v.).

Pluvius (Lat.), rain-maker, epithet of Jupiter.

Plymouth, 1) co. bor. and seapt., Devon, Eng., on the Plym and Tamar estuaries and at the head of *Plymouth Sound*; with *Stonehouse* and *Devonport* forms the "Three Towns" (largest tn. in Devonsh.; pop., 208,200); important naval station and fortress; great port; shipb., foundries, flour mills, fisheries. The *Hoe* a famous esplanade overlooking P. Sound. 2) Seapt., Mass., U.S.A.; fisheries; landing-place Pilgrim Fathers, 1620; pop., 13,000. 3) Cap., Montserrat, Brit. W. Indies; pop., 1,700. **P. Brethren**, Protestant Calvinistic sect, followers of J. N. Darby (d. 1882); also known as Darbyites. **P. rock**, var. of domesticated fowl, of hardy breed, large, with yellow legs and flesh; orig. in U.S.A.

Plynlimmon, mtn. in Cardigansh. and Montgomerysh., Wales; 2,468 feet.

Ply-wood, boards made by glueing together several layers of very thin wood with the grain crossed.

P.M., abbr. 1) *post meridiem* (Lat.), after noon; 2) *pro mille* (Lat.), per 1,000; 3) *pro memoria* (Lat.), for remembrance.

Pneuma 1) (Gr.: "breath"), spirit, universal soul. 2) (Eccles.) The Holy Ghost (*P. Hagion*). 3) (Mus.) Anc. sequence of notes to which the last syllable is sung in certain R.C. prayers, etc.

pressed air; for sending letters or small parcels. **P. tyre**: see TYRE.

Pneumonia, inflammation of the lungs. An acute, infectious disease characterized by fever, difficulty in breathing, pain in chest, and blood-stained expectoration. The crisis

occurs about the 7th day, when temperature falls to normal.

Pneumothorax, the presence of air in the pleural cavity (*q.v.*). **Artificial p.**, process of admitting air into the pleural cavity at one side betw. the chest-wall and the lung, in order to allow a lung, diseased with tuberculosis, to collapse and rest. During rest, the infection may be overcome, and the lung then slowly resumes its function.

Pnom-penh, cap. of Cambodia, Fr. Indo-China, on Riv. Mekong; pop., 84,600 (600 Eur.); trading centre for Siam, Upper Burma, Laos.

Po, 1) longest riv. in It. (410 m.); rises on N. slopes of Monte Viso; traverses Plain of Po and falls into Adriatic; navigable. from Turin; broad delta; many dams in lower reaches to prevent flooding. 2) (Chem.) Sym. for polonium (*q.v.*).

Poaching, trespassing on land for purpose of illegally killing or catching fish or game (*q.v.*).

Pocahontas (d. 1617), N. Amer. Indian heroine; tradit. saved life of Capt. Jn. Smith condemned to death by her father, chf. Powhatan; converted to Christianity; m. John Rolfe, an Englishman; came to Eng. (1616), and d. at Gravesend.

Pochard, bird of duck fam., found gen. in N. Hemisphere, with pendent lobe on first toe; expert diver; sexes usually differ in colour.

Pocket, (mining) small isolated mass of ore, e.g., gold. **P. of hops**, 168-224 lb.

Poco, (mus.) It., a little; *p. a p.*, little by little.

Pod, (bot.) seed vessel of leguminous plants, such as pea, bean, etc.

Podestà, in the Mid. Ages, chief of police of the Ital. city republics; since 1926, mayor appointed by the State.

Podophyllum: see MANDRAKE.

Poe, Edgar Allan (1809-49), Amer. story writer and poet; *Tales of Mystery and Imagination*.

Poëcapelle, vill., W. Flanders, Belgium, in N.E. of Ypres salient during World War.

Poeni, Roman name for the Carthaginians; hence, "Punic" Wars.

Poeta nascitur, non fit (Lat.), "a poet is born, not made."

Poet Laureate, state poet, "crowned with laurels"; office still conferred in England. **Poetics**, part of aesthetics concerned with poetry (see ARISTOTLE); technique of verse.

Poetry, in general any artistic expressn. of imaginative feelg.; in partic., as a lit. art, expressn. of thought and emotions in rhythmic lang. with appropriate diction, wh.,

accordg. to Milton, is more "simple, sensuous, and passionate" than logic.

Pogrom (Russ.), persecution or massacre of a class of the pop., esp. the Jews.

Poliu (Fr.: "hairy"), nickname for Fr. soldiers.

Poincaré, Henri (1854-1912), Fr. analytical mathematic. **P., Raymond** (1860-), Fr. statesm.; Pres., 1913-20; Pr. Min., 1912 and 1922-29; ordered occupation of Ruhr, 1923; stabilized franc, 1926-28.

Poinsettia, garden plant, native to Centr. Amer., with white or brilliant scarlet flowers.

Point, 1) (naut. and scientif.) one of 32 marks into wh. compass (*q.v.*) is divided; degree, as of temperature: *boiling, freezing* point. 2) (**decimal p.**), mark dividing fractional parts from integral numbers. 3) (Math. and geom.) Accordg. to Euclid, that wh. has no parts or magnitude, only position. 4) (Rly.) Tapered rail moved by switch (*q.v.*) for changing train from one set of rails to another.

5) (Sport) Position of fielder in cricket, facing batsman on off-side. **P. discharge**, (phys.) discharge of high-tension electr. into the air from pointed conductors. **P.-lace** (Ital. *punto*), lace made with the needle (*needle-P.*); see LACE. **P.-to-point**, horse-race across country, not over a prepared course.

Point Conception, promontory of California, U.S.A., W.N.W. of Los Angeles.

Point d'appui (Fr.), fulcrum; supporting point; base of operations.

Pointer, sporting dog, resembling lightly built foxhound (*q.v.*), trained to indicate presence of game by "pointing."

Pointillism, method of painting in juxtaposed spots of pure colour, which, seen from a proper distance, blend into a natural atmospheric effect.

Point system, a standard system of measurement of printing type bodies. A point = about 1/72 or .01388 (actually

Poiré, Emmanuel: see CARAN D'ACHE.

Poison, substance which acts injuriously on living organisms (also on catalysers, *q.v.*) when present in relatively small quantity. P.s acting on animals and human beings may be divided into: *Corrosive P.*, destroying tissue directly, esp. internally, *e.g.*, mineral acids and alkalis, carbolic acid, corrosive sublimate; *irritant P.*, causing inflammation, *e.g.*, arsenic compounds, phosphorus, oxalic acid; *systemic P.*, acting injuriously on particular organs so as to disturb their function, *e.g.*, alkaloids, prussic acid, alcohol, ether, hypnotic drugs, trinitrotoluene, etc.; also *gases* such as carbon monoxide (*q.v.*). *Allergic P.s* are all proteins (*q.v.*). So-called food-poisoning or ptomaine-poisoning is due to presence of a bacillus which causes gastro-enteritis; plants containing poisons (gen. systemic) may be accidentally eaten, *e.g.*, fungi.

Poisoning, treatment of, must depend upon nature of poison. *Prussic acid* and *cyanide of potassium*, effects of wh. are very rapid and deadly: apply fumes of strong ammonia, drinks of hot and cold water, rubbing of limbs, artificial respiration (*q.v.*), injection of atropine (*q.v.*). *Strychnine* causes tetanic spasms, wh. necessitate chloroforming patient in order to wash out stomach. *Opium*, administer coffee, brandy, keep patient awake. *Coal-gas*, give air, artific. respiration, oxygen, brandy; administer strychnine and digitalin hypodermically. See also: ANTIDOTES; EMETICS.

Poissy, Colloquy of, abortive attempt by Catherine de' Medici, 1561, to reconcile Catholics and Protestants of France.

Poitiers, cap. of dépt. of Vienne, France; pop., 42,500; cathed., 1160-1380; univ. fndd. 1431; wine, wool, leather; agric. produce. Charles Martel defeated Saracens, 732; defeat of the Fr. by Eng. under Black Prince, 1356.

Poitou, former prov. W. Fr., now divided betw. Vienne, Deux-Sèvres, and La Vendée.

Poker, card-game for any number up to 8, in wh. each player receives 5 cards and (usu. after exchanging some or all of them) backs his hand to beat that of any other player.

Pola, naval base on Adriatic, S. of Istrian penins., It.; pop., 55,618; prior to World War principal arsenal and station for Austria-Hungary's fleet; occupied by Italians, 1918.

Poland, republic, E. Europe; bounded N. by Prussia, Baltic Sea, Free State of Danzig, E. Prussia, Lithuania, and Latvia; E. by U.S.S.R.; S. by Rumania and Czecho-

slovakia; and W. by Prussia. Area, 140,960 sq.m.; pop., 31,148,000 (69.1% Poles; 4 million Ukrainians, 2 million Jews, 1 million Germans, 1,800,000 Russians). Access to the sea is obtained through the Polish Corridor, leading to the new port of Gdynia (*q.v.*), on W. coast of the Gulf of Danzig. Interior occupied by the Polish Plain, except in the S., where the land, diversified by hills and plateaux, rises to the Carpathians, on the frontier of Czechoslovakia. Extensive forests and marshes in the east. The chief riv. is the Vistula, which, with the Bug, San, and other tributaries, drains the centr. plain. Other rivers include the Dvina, Viliya, and Niemen, all flowing through the Baltic re-

publics; the Pripet (E. into the Dnieper); the Warta or Warthe (W. into Germany); and the Dniester (S.E. into the Black Sea). Climate, Continental. Chief occupation, agriculture: rye, oats, barley, wheat, potatoes, sugar-beet, flax, hops, hemp; forestry; livestock; poultry; coal, lignite, iron, lead, zinc, potassium; petroleum and natural gas (Galicia). Manuf.: cement, paper, chemicals, textiles (Lodz). Rlys., 12,450 m. Country divided into City of Warsaw, and *Voivodeships* of Warsaw, Bialystok, Cracow, Kielce, Lodz, Lublin, Lwow (Lemberg), Nowogródek, Polesie, Pomorze, Poznan (Posen), Silesia, Stanislawow, Tarnopol, Wilno (Vilna), and Wolyn. Chf. tns.

Warsaw (cap.), Lodz, Lwow, Poznan, Cracow, Wilno, Katowice, and port of Gdynia.

Constitution of 1921 provided for Parliament of two chambers, *Sejm* and Senate, both elected by universal suffrage; the two houses unite as a National Assembly to elect the President (for 7 yrs.). Amended after Marshal Pilsudski's *coup d'état* in 1926, when the executive was made stronger at the expense of the legislature.

History: Boleslav I (992-1025), first Kg. of Poland, ruled over a territory extending as far W. as the Elbe; after 1138 the country was split up into several small and mutually hostile principalities (Great and Little Poland, Mazovia, Silesia, Pomerania, etc.). In 1241 the Mongols under Batu defeated the Poles and Germans at the battle of Liegnitz (*q.v.*). After the Tatar invasion there was considerable immigration of German traders, many of whom were absorbed as Poles. In 1201 the Knights of the Sword, and in 1208 the Teutonic Knights, settled in what is now E. Prussia. The Teutonic Knights were defeated by Wladislaus I in 1332, after he had reunited Great and Little Poland in 1309. Casimir III, the Great (1333-70), left Poland to his nephew, Louis of Hungary. In 1386 Jagiello, Grand Duke of Lithuania, married Louis's daughter Hedwiga and became Kg. of Poland, thus uniting the two countries. Moldavia was acquired c. 1400. In 1410 the Teutonic Knights were decisively defeated by Jagiello at Tannenberg, and E. Prussia temporarily became a Polish dependency. The Turks were expelled from Moldavia in 1485. Religious controversies during the Reformation. From 1572 to 1791 the power of Poland declined under a succession of foreign kgs.; electoral monarchy, oligarchy, and *liberum veto* (*q.v.*). Wars with Sweden, Russia, and Turkey. John Sobieski (1674-96) saved Vienna from the Turks in 1683. Under Augustus II of Saxony (1697-1733) Poland suffered severely in the war with Sweden (1700-20). **First Partition of Poland** (1772) distributed one quarter of the country betw. Russia, Austria, and Germany. **Second Partition** (1793) left Poland with one-third of her former territory; unsuccessful revolt and war with Russia under Kosciuszko, 1794. After **Third Partition** (1796) Poland disappeared as a nation for 120 years. Grand Duchy of Warsaw erected by Napoleon after Peace of Tilsit, 1807. "Congress Poland," a portion of centr. Poland, forming a kgdm. (with Tsar of Russia as kg.), created at the Congress of Vienna, 1815; absorbed in Russian prov., 1863. Unsuccessful revolt at Warsaw, 1830. After the World War, Poland became an indept. republic, formed out of territory previously belonging to Russia (Russian Poland, etc.), to Austria

(Galicia), and to Germany (parts of E. Prussia, Silesia, etc.). Vilna (Wilno) was annexed in 1920 (*see* LITHUANIA and WILNO). Poland joined Yugoslavia, Rumania, and Czechoslovakia in Little Entente in 1921.

Polish Literature: Important religious and historical literature in Mid. Ages. "Golden Age," in 16th century, inspired by Court and by University of Cracow. Has felt the influence of the baroque, classic, romantic, and modern movements. Little known outside Poland.

Polar angle, formed by meeting of 2 meridians at N. or S. Pole. **P. axis** of an astronom. instrument is set parallel to that of the earth. **P. lights**, the Aurora Borealis and A. Australis; *see* AURORA. **Polar night**, period when, in either of the circumpolar regions, the sun does not appear above the horizon; *cf.* MIDNIGHT SUN. **P. regions:** *see* ARCTIC and ANTARCTIC CIRCLES. **P. distance**, (astron.) arc of celest. meridian contained betw. celest. body and N. or S. pole, according to hemisphere in wh. it is.

Polarimeter, (phys.) apparatus for measuring rotation of the plane of polarization

Polarization

(*q.v.*) of light substances, usu. solutions, e.g., of sugar; strength of solution can then be determined.

Polaris: *see* POLE-STAR.

Polarity, tendency of a body to exhibit opposite properties in opposite directions; possession of 2 poles with contrasting characters, e.g., attraction and repulsion.

Polarization, (electrolytic) passage of current thr. liquid electrolyte (*see* ELEC-

TROLYSIS) causing deposition of different products (e.g., hydrogen and oxygen, metal, etc.) on two electrodes. This gives back electromotive force (E.M.F.) of polarization, which must be deducted from E.M.F. of circuit in calculating current by Ohm's law. If orig. E.M.F. is removed, polarization will send current in reverse direction. In **P. of light** vibrations of light occur at right-angles (to direction of propagation); if direction of vibrations in all points of the ray lie in the same plane (*plane of P.*), light is said to be plane-polarized. Natural light (e.g., sunlight) is unpolarized; direction of vibrations irregular. *Nicol's prism* (q.v.) generally used to produce polarized light; passes only light vibrating in a single direction. **P.** also occurs on reflection of light. Polarized light used for examination of crystals. Sugar solutions rotate the plane of polarization.

Polder, tract of land in Holland lying below sea-lvl., reclaimed from sea and protected by dykes (q.v.).

Pole, Reginald (1500-58), Eng. cardinal; papal legate to Qn. Mary (1554), and abp. of Canterbury (1556); devoted his life to restoration of Ch. of Rome in England. **P., Richard de la** (d. 1525), E. of Suffolk, pretender to Eng. Crown; went to the Continent, 1504, whence he planned an invasion of England.

Pole, (phys.) 1) of a magnet, point within magnet from wh. external lines of force appear to emanate. 2) (Geog.) Point of intersection of axis of the Earth with its surface and also with all meridians and circles of longitude. The geograph. poles of the Earth are "true" N. & S.; magnetic poles, towards which magnetic compass needle points, are not situated at geograph. poles; N. is at Boothia Felix, 70° N. lat.; S. at Victoria Land. See also NORTH. 3) (Measure): see ROD, POLE, or PERCH. **P.-star**, (astron.) variable double or triple star α in constell. Ursa Minor (q.v.); 1° 3" from true N., used for finding direction at night; nearly in line with α and β of Ursa Major; centre of N.C.H.; see PL., ASTRONOMY.

Polecat, small, active carnivore closely related to weasels, martens, and stoats. Found throughout Europe.

Exch.) amt. quoted for a security above its nominal value. *Ant.: discount.* **P. wage system**, or **bonus system**, system of wage payment in wh. basic wage is supplemented by an amt. dependent on quality or quantity of work performed or time saved; bonus also granted in consideration of abnormal incr. in cost of living. **P. bonds:** *see* BONDS.

Premonstratensians, order of canons regular, named from the abbey of Prémontré, nr. Laon, where it was founded in 1120 by St. Norbert of Xanten; called also Norbertines, or, from their habit, "White Canons."

Preparatory school, privately owned school in Gt. Brit. for preparing boys of 8-14 for public school; usu. submit voluntarily to inspection of Bd. of Educ., who give certificate of efficiency.

Preposition, word placed before or after another to denote its assoc. with a 3rd, e.g., *with, against*.

Pre-Raphaelitism, Eng. art movement aiming not at mediaevalism but at the sincerity and naturalism of the earlier Ital. painters; started by Holman Hunt, who, with Millais and Rossetti, founded the P.-R. Brotherhood in 1848; supported by Ruskin. *See also* OVERBECK.

Prerogative, that part of Eng. law which entitles kg. personally or thr. Minsters or Privy Council to act without parl. concurrence in certain matters, e.g., conferring titles of honour, granting charters, recognising denizens (*q.v.*), management of civil service, foreign affairs, control of nat. defence in war-time.

Presbyopia, long-sightedness of middle age; *see* ACCOMMODATION.

Presbyter (Gr.: elder), leader of an early Christian community; priest; elder. **Presbyterian Church**, one recognising only one order, that of presbyter, in the ministry, esp. the established Ch. of Scotland, as contrasted with Episcopalian Church. *See* CHURCH OF SCOTLAND.

Presbyterianism, form of church govt. recognising only one order of sacred ministers, i.e., presbyters or priests, whose authority derives from an assembly composed of elected representative presbyters; P. churches exist esp. in Eng.-speaking countries, also in France, Switzerland, Netherlands. *See* CHURCH OF SCOTLAND; PRESBYTER; SYNOD.

Prescott, Wm. Hickling (1796-1859), Amer. historian; *Conquest of Mexico*, 1843; *C. of Peru*, 1847; etc.

Prescription, 1) (law) title to property or right authorised by long usage. **Negative P.** gives person who has been in uninterrupted possession for a cert. time a valid title by depriving any adverse claimant of right to sue him. **Positive P.** given to person who has enjoyed a right for a great length of time, e.g., a right of common; a valid title; usage must have been from time immemorial. 2) (Med.) An order given by a doctor for medicine for his patient. It specifies the drugs to be used and their quantities; gives such directions as may be necessary for the dispenser, and also instructions as to administration or application. A P. is usu. headed with the sign \mathcal{R} , now interpreted as meaning *recipe* = "take", but really a survival from the practise of alchemists, being a symbol meaning "Aid me, Jupiter." In Gt. Brit. a P. for *dangerous drugs* must bear the name of the prescriber and the name and address of the patient, and may not be repeated except on further instructions from the prescriber.

Present arms, (mil.) to bring rifle to a pendic. posit. in front of body (as compliment).

Preserving, process of ensuring food-stuffs against putrefaction (by means of chilling, hermetically sealing, etc.); skins are preserved by chem. means (combinations of arsenic).

President, presiding officer, esp. of large polit. organ.; in repub. constitutions, head of State.

Press, machine for exerting strong pressure. Main types: *Screw*, used as wine-press on grapes to expel juice, as small hand-stamping tool, as copying-press in offices. *Letter* and *toggle* (*q.v.*), of many kinds: large mechanical P. for stamping, drawing, and pressing metal, for bending, etc. *Eccentric*, similar to above. *Piston P.*, work by means of gases or liquids; *hydraulic P.*, for compressing, baling, etc. For *Newspaper P.* *see* NEWSPAPER; for *Printing P.*, PRINTING.

Press gang, organized band of officers and men formerly entrusted with duty of impressing men for service in Brit. Navy; seamen, disorderly servants, vagrants, etc., were so enlisted until end of Napoleonic Wars, since when sufficiency of voluntary recruits has rendered P.G. obsolete.

Press laws, legislatn. in restraint of the P. arose from eccles. supervision of printing (bull of Alexander VI against unlicensed printing, 1501); German diets made regulations, 1524-48; in Eng., after Reformation, Crown assumed power of granting right of printing books; Star Chamber under Tudors and early Stuarts assumed control of printing; Milton's *Areopagitica* (1643) demanded liberty of unlicensed printing; *Licensing Act* (1662) made stringent regulations for licensing of books, but was not renewed after 1695; last duties on newspapers abolished 1870, since when principle of freedom of Press has been establd., proceedings for libel or obscenity, when necessary, being taken under ordinary law. Principle of freedom of Press is recognised in constitution of U.S.A.; in many countries since World War, esp. It., Russia and Ger., various degrees of State control are exercised over expression of opinion.

Pressburg: *see* BRATISLAVA.

Pressed glass, very strong glass for top lights, etc.; made by pressure in iron moulds. Cannot be cut with a diamond; must therefore be made to measure.

Pressure gas, gas under high pressure, to incr. its effect for heating and lighting.

Presteign, **Prestelgne**, former co. tn., Radnorsh., Wales, on Riv. Lugg; pop., 1,100.

Prestidigitator: *see* CONJUROR.

Presto, (mus.) quickly; *prestissimo*, very quickly.

Preston, co. bor., Lancs, Eng., on Riv. Ribble; pop., 118,800; manuf. cotton, linen, iron; important rly. junction. **P. North End**, Eng. assoc. football club, fndd. as

Rugby club, 1870, changing to assoc., 1882; orig. members of Football League; won league championship 1888, '89, and Eng. Cup, 1889.

Print, 1) letterpress, or illustration, obtained from type, block, or plate, by means of a printing press. 2) (Photog.) Positive picture obt'd. from a negative plate or film by exposure of sensitised paper beneath negative to light. 3) (Textiles) Calico or cotton fabric printed with coloured pattern.

Printing, earliest attempts (China) by means of wood blocks upon wh. pictures, etc., were cut in relief, impressions being obtained by dabbing raised surface with a thick ink and transferring to paper by rubbing (first known Eur. dated print, the St. Christopher 1423—Chinese many centuries earlier).

Printg. fm. movable type (*typography*) believed to have bn. in use in China, 11th cent., but, as now practised, derives from MS. writg. wh. fl. in Eur. fm. Rom. times to close of the 15th cent., its object being to reproduce and multiply the work of the scribes by a cheap and rapid method. Name of actual inventor unknown, but credit usu. given to Johann Gutenberg, of Mainz, with whom are associated Johann Fust (financially) and Peter Schoeffer (mechanically). Earliest piece of typography extant to wh. date can be attached, a Mainz Indulgence of 1454; first book, Bible (now in Bib. Nat., Paris), press (Fust in wh. first owner recorded Schaeffer), 15th Cent.

Prince of Wales's Crest

Aug., 1456, as date of completion of rubrication and binding; in 1457 Fust and Schoeffer's *Psalter* (first book with printed date of publication and names of printers) demonstrated that the craft was well beyond the experimental stage. Printg. rapidly spread in Germany. Ulrich Zell fndd. a press at Cologne, 1466; Gunther Zainer produced the 1st Augsburg book, 1468; Nuremberg followed, 1470, and by end of 15th cent. printg. was practised in 51 Germ. towns, and output was over 10,000 editions. In Italy 1st book printed (1465) by Sweynheym and Pannartz (Germans) at Subiaco, near Rome; another German, Joannes de Spira, issued 1st Venice book (*Cicero*, 1469); Italy's patrons of learning, so soon attracted printers that by 1473 the supply of Latin classics exceeded the demand. In type-design early printers followed the local book-hand, so early German works are in varyg. forms of Gothic, and early Ital. in the round miniscule of the Ital. scribes, whence *roman* types (see TYPE). France (esp. Paris, Lyons, and Rouen) was also indebted to Germans (1470), and printg. was definitely estab'd. in the Low Countries, 1473, Austria and Spain, 1475, and in Eng., 1476 (Caxton's *Indulgence*). Printers in Eng. contemporary w. Caxton (*q.v.*) were Theodorick Rood (of Cologne) at Oxford, 1478-85; the otherwise unknown "school-master printer," St. Albans, 1479-86; and John Lettou and Wm. de Machlinia, who printed law-books in London. Caxton (d. 1491) was succeeded at Westminster by his assistant, Wynkyn de Worde, a most prolific printer who (*c.* 1500), estab'd. himself in Fleet Street—still one of the centres of printing. Richd. Pynson (the King's Printer), who worked close to Temple Bar, and Julian Notary were contemporaries of de Worde. European printg. of 16th cent. was marked by a succession of scholar printers who did much to spread the New Learning. Aldus Manutius of Venice is famous for his

long series of cheap and small-size Gr. and Lat. classics, for productn. of wh. he cut a type (*Italic*) fndd. on the cursive hand then used in Italy. John Froben of Basle produced a remarkable number of beautifully printed classics—inclgd. Erasmus's New Test. in Greek. In France the Estiennes, Simon de Colines and Geoffrey Tory set a high standard of typographical excellence. Dut. printg. and type-founding became of importance in the 2nd half of the 16th cent. and exercised a wide influence through work of Christopher Plantin and the Elzevir family (Plantin's printg. house was in existence till 1876, when it was acquired by the city of Antwerp and has since been preserved as a museum). The Elzevirs (business fndd. at Leiden, 1583) specialized in fine editions of small format.

Progress was slow in Eng. during early 16th cent. (Robt. Copeland, Jn. Rastall, and Thos. Berthelet—who succeeded Pynson as King's Printer) and the incorporation of the Stationers' Co. in 1557—when it became obligatory on printers to be members of the Co. and to register the name of any book they desired to print—did not improve matters. Both Ch. and State sought to control the output of the presses; the Co. was used as a means to this end, with the result that till the end of the 17th cent. real progress was impossible. Though the literary activity of the Elizabethans entailed a great increase in the number of Eng. books, typography was not comparable with that of leadg. printers abroad; creditable work was, however, done by John Day (1522-84), who was also the 1st Eng. printer to cut types of importance.

In the 17th cent. (rise of the pamphlet and newspaper) typographical degeneration continued, and foreign type was preferred until

the type-founder Wm. Caslon showed its inferiority (c. 1735) and redeemed Eng. letter-design and, incidentally, that of the printed book.

The 19th cent. saw the inventn. of the printg. machine and the evolutn. of mechanical type-setting (see *LINOTYPE* and *MONOTYPE*), wh. made possible the setting and printg. of type at vastly increased speed, but did little to improve the quality of printing. Progress in that directn. was due mainly to the Whittinghams (Chiswick Press) and later to William Morris (*q.v.*) and his dis-

ciples, whose example and influence long caused the productions of the composing machine to be considered necessarily inferior for book-work. Since 1920, however, a revolutn. in the methods and results of typography has taken place; publishers and printers, realising the potentialities of the composing machine, have insisted on improvements in letter-spacing and the quality of type, so that latterly the typography of the everyday book and the better class newspapers and periodicals has been raised to a level often equal to that of the old hand-setting.

An even greater revolution has taken place in *commercial printing*, i.e., that used in the marketing of goods, and in some cases the "modernism" of advertisement printers, with their many new type faces, has shocked those who dislike departure from tradition.

Books and periodicals relatg. to the aesthetics and practice of printg. have multiplied enormously in recent years; the printers' Technical Library, at St. Bride Institute, London, possesses some 30,000 items relatg. to it. **P. processes** can be divided into three main groups: 1) *Relief*, in which the printing surface is raised to receive the ink, as in type (*q.v.*), wood engraving (*q.v.*), line engraving (*q.v.*); *half-tone* process (*q.v.*). 2) *Intaglio*, in which the design to be printed is sunk in an otherwise smooth metal plate. The sunk portions are filled with ink and the smooth surface cleaned before printing. Greater pressure (applied by rotary methods) is necessary than in relief printing. See *ETCHING*, *PHOTOGRAVURE*, *MEZZOTINT*. 3) *Planographic*, in which the design to be reproduced is on a flat surface. See *BOOK PRODUCTION*; *CHASE*; *ELECTROTYPES*; *FORM*; *LITHOGRAPHY*; *STEREOTYPE PLATES*; *TYMPAN*; *TYPE*; *TYPE-COMPOSING MACHINES*. **P. telegraph**: see *TICKER*.

Prior, Matthew (1664-1721), Eng. poet and diplomat; author of witty epigrams and occas. verses.

Prior (Lat.), 1) head of a *priory* (*q.v.*) of monks or friars. 2) Deputy superior of an abbey (*q.v.*), ranking next after the abbot. 3) Superior of a military order of monks (e.g., Grand Prior of the Knights of St. John of Jerusalem). 4) Magistrate of the republic of Florence in 13th century. **Priory**, monastic society or its buildings, ranking below an *abbey* (*q.v.*) in importance.

Priority, precedence in order of time. **P. shares**: see *PREFERENCE SHARES*.

Pripet, riv. (500 m.), rises in Poland, flows through White Russia to Ukraine, joining Riv. Dnieper near Kiev; navigable from Pinsk (200 miles). The **P. Marshes** (in Poland and White Russ.), thr. wh. the riv. flows, were the scene of Russian disasters during World War, esp. 1915.

Priscilla: *see* AQUILA.

Prism, (phys.) solid body bounded by rectangles, sides of wh. are parallel in one direction. In optics, prism-shaped bodies of solid glass or vessels filled with liquids; P. of triang. section for analysis of light in spectroscope (*q.v.*); or, with one angle a rt.-angle, giving total reflection of light and serving in place of mirror.

Prismatic binocular, (optics) twin telescope, in wh. picture seen is turned rt. way up by means of totally reflecting glass prisms; incrsd. stereoscopic vision obt'd. by increasing distance betw. objective lenses.

Prismatic telescope: *see* TELESCOPE.

Prison, place of captivity; state bldg. in wh. convicted criminals are confined whilst undergoing punishment, or in wh. those awaiting their trial are detained. Among earliest Eng. prisons were the Marshalsea and Fleet (*qq.v.*); in 16th cent., workhouses, or "houses of correction," were establd. similar to Bridewell (*q.v.*) and known as *bridewells*. P. system, in its modern sense, dates from 18th century. A parliamentary report on cruel practices of officials of prisons (1729) led to acts intended to bring about reformation. In 1778, owing to efforts of John Howard (*q.v.*), Prison Act was passed introducing princ. of moral reform and solitary confinement. System of transportation of criminals to Australia was practised, 1788-1840, when its attendant evils caused it to be abandoned. Millbank Penitentiary (b't. 1823) was first Eng. prison constructed on princ. of segregation, occupation, and education of prisoners. System of confinement in cells was introduced, 1831, the 1st prison to be constructed on this princ. being Pentonville (*q.v.*). Introductn. of *penal servitude* or *hard labour* necessitated prisons in neighbourhoods where public works were in progress, e.g., Portland, Chatham, Portsmouth (breakwater, docks), and Dartmoor (land reclamation). By Prison Act (1898) prisoners are classified accdg. to degree of offence, and they may earn remission of part of sentence. Prevention of Crimes Act (1908) introduced Borstal System (*q.v.*).

Privas, cap. dépt. Ardèche, Fr.; pop., 6,680; textiles, silks; ironworks.

Private bill, bill in Parl. wh., if passed, will be an act affecting private int. (e.g., to dissolve a marriage or to empower a co. to act outside its regular powers) or a particular locality. *See* LOCAL LEGISLATION.

Privateering, until abol. by Paris Declaration of Naval Law in 1856, the right of seizing foreign trading vessels during a naval war,

granted to private ships by a govt. and evidenced by *letters of marque*.

Private member, member of Hse. of Com. who is not a mem. of government. **P. m.'s bill,** bill introduced by such a member, dist. from "private bill" (*see* above).

Privet, (bot.) *Lingustrum vulgare*, shrub with white flowers and blue-black berries; makes good hedges. **P. hawk-moth,** moth with grey fore-wings, hind-wings with pink tinge; larvae have a horn at end of body; feed on privet.

Privilege, 1) in libel cases, statement is privileged when person to whom it is made has common interest with person who makes it, e.g., character of a servant. Right to claim privilege is defeated by proof of malice. 2) Statements made in either Hse. of Parl. are absolutely privileged.

Privy Council, originally kg.'s confidential advisers, increased in number thr. life membership and honorary appts., until now comprising more than 300. Has ceased meeting as whole, but many governmental acts tech. performed by Order in Council, for issuing wh. a few members summoned with or without Kg. in person. *See* JUDICIAL COMMITTEE; ORDER IN COUNCIL.

Privy purse, amt. set apart for private and personal use of Eng. sovereign.

Prize, in naval warfare, a captured enemy vessel, with her cargo. **P. court,** crt. (in Gt. Pro (Lat.), for; **p. aris et focis**, for altars and hearths; for God and country; **p. bono publico**, for the public good; **p. et contra**, for and against; coll. plur., *pros and cons*; arguments on both sides; **p. forma**, for form's sake, as a formality.

Proa, out-rigged, double-ended sailing-boat, with one flat side and lateen sails; used by natives of Malay Archipelago.

Probability, Theory of, (math.) calculation of ratio between no. of times an event happens and the total no. of observations (whether event happens or does not). When any observation is *as likely* to occur as any other, the P. (*a priori* P.) is given by the ratio that no. of observations favourable to the event bears to total no. of observations; e.g., a balanced die has 6 faces, each of which is as likely to appear when die is thrown, so that chance of any one face appearing is 1/6. If the observations are *not known to be equally likely*, but a certain proportion of the occurrences are found to produce a particular event, then the P. (*a posteriori*) is defined as the proportion of favourable events to total no. of occurrences *as the latter becomes infinitely large*, e.g., chance of person of partic-

ular age in certain district dying this yr. is equal to proptn. of deaths of persons of such ages in district in yr. to total no. of such persons alive during yr. (latter being assumed to be of sufficiently large dimensions to estimate P.). Range of P. is from 0 to 1, 0 indicating certainty of event not occurring, and 1, of its occurring. *Addition of Chances:* If event can be obtained either from an occurrence whose chance is p_1 , or from another whose ch. is p_2 , the total P. of event happening is $p_1 + p_2$; e.g., chance of getting a spade in a pack of 52 cards is chance of getting Kg. of Spades + chance of getting Qn. of S. + ... and so on down to Ace of S. = $\frac{1}{52} + \frac{1}{52}$

+ ... = $\frac{13}{52} = \frac{1}{4}$. *Multiplication of Chances:* If

p_1, p_2 are the chances of success in two independent experiments, then $p_1 p_2$ is chance of double success, e.g., P. of obtaining two 6's with two consecutive throws of a die is $\frac{1}{6} \times \frac{1}{6} = \frac{1}{36}$. Chief application of Th. of P.

is to Th. of Errors, being of importance to physics (quantum theory of gases), biology (doctrine of heredity), statistics, and insurance. Developed by Cardano, Pascal, Jacob Bernoulli, Laplace, Gauss, Karl Pearson, A. L. Bowley, Keynes, and others.

Probate, offic. proof of will of a deceased person. Copy of orig. will furnished to executor with certificate of will having been proved.

Rabbi (Hebr., master), Jewish teacher of the law; title conferred by a number of Jew. colls. in Europe and U.S.A. (= degree of D.D.); also by individual rabbis in E. Europe. A chief R. is the spiritual head of the community and pres. of the eccles. court. There is only one recognized C.R. in the Brit. Empire.

Rabbit, a rodent of the same family as the hare; smaller and shorter limbed; lives in burrows; very prolific and voracious, and causes much damage to vegetation; skin used for fur and felt.

Rabbit

Rabelais, François (c. 1495-1553), Fr. physician and satirist; *Gargantua and Pantagruel*.

Rabies, contagious disease of dogs, communicable to man or domestic animals by bite of dog. The animal becomes restless, excited, and tends to bite at every object it meets; later paralysis may occur; death ensues in 5-12 days. Incubation in man,

40-50 days, then similar symptoms. Prophylaxis: cauterisation of the wound by red-hot metal or chemicals; Pasteur's vaccine treatment.

Belgian Hare:
Large breed of domestic Rabbit

Rabshakeh, (O.T.) officer of Kg. of Assyria, sent agst. Jerusalem, temp. Hezekiah.

R.A.C., abbr., Royal Automobile Club.

Raccoon, small carnivore of N. Amer., with stout body, broad head, pointed muzzle, moderate tail; fur thick and short; almost omnivorous feeder, hunting along banks of streams and lakes, washing its food in the stream; partly arboreal, female giving birth to her cubs in hollow tree-trunk; hibernates.

Raccoon

Raceme, (bot.) inflorescence in wh. the flowers branch out from main stem on subsidiary branches.

Races of man, (for origin of man see PRE-HISTORY). Classification of present-time man has been attempted by basing it on different characteristics, e.g.: *Colour* (white, yellow, black); *Shape of skull* (dolichocephalic, brachycephalic, *q.v.*); *Facial characteristics* (nose, lips, shape of jaw, measured by facial angle); *Hair* (straight, curly, wiry); also with help of linguistic and cultural peculiarities. *Asia*: Ainu, Veddas, Chinese, Malays; *Australasia*: extinct Austrln. aborigines, Papuo-Melanesians; *Africa*: Negro, dwarf, Akkas, and Bushmen; Bantus of Central Africa; *America*: Indians; *Europe*: Nordic Races (Scand., Gt. Brit., N. Ger. etc.); Oriental and Slav races (Cent. and N.E. Europe); Dinaric (Alps); Mediterranean races.

Racing: Horse-racing; a sport practised since very early times (Greece and Rome). As now known in England it is divided into *Flat-racing* from late March to late November, and *Steeplechasing* during winter and early spring, most of the important races being included in the former. Outstanding dates in history of the sport in England are: 1st known reference c. 1174; public races held at Chester, 1512; great

encouragement by Stuart kgs., and beginnings of Epsom and Newmarket as racing centres *temp.* Jas. I. *Racing Calendar* establd., 1727; estabtd. of great 3-year-old races, St. Leger, 1776; Oaks, 1779; Derby, 1780; Goodwood, 1802; Ascot Gold Cup, 1807; Newmarket—2,000 Guineas, 1809; 1,000 Guineas, 1814; Cesarewitch and Cambridgeshire, 1839; Lincoln Handicap, 1853; Grand National Steeplechase, 1839. Handicaps are races in which horses (5 yrs. and over) carry weights in accordance with their estimated capabilities. The whole sport is managed and supervised by the Jockey Club, whose activities are governed by three stewards, one of whom retires and is replaced each year. Not the least important aspect of horse-racing is its association with betting and bookmaking, (*q.v.*). See also BETTING: TOTALISATOR.

Rack, oblong wooden frame with arrangement of pulleys and levers, formerly in use in Eng. and elsewhere as instrument of torture to extract evidence from prisoners by dislocation of their joints; in 1628 judges decided its use was opposed to laws of England. **R.-railway**, mtn. rly. with driving cog-wheels gripping into racks.

Racking, process of straining or drawing-off clear liquid from lees, sediment, etc., in making of beer and wine.

Racquet, long-handled oval implement consisting of an open wooden frame tightly strung with catgut, for striking the ball at tennis, lawn tennis, racquets, etc., and for striking the shuttlecock at badminton.

Racquets, game for 2 or 4 players in a crt. with walls, against which a small leather-covered ball is struck with a racquet.

Radak Islands: see MARSHALL ISLANDS.

Radautz, tn. in Bukovina, Rumania; pop., 17,000; school of agriculture.

Radcliffe, Ann (1764-1823), English novelist of the "Terror" school: *The Romance of the Forest*, 1791; *The Mysteries of Udolpho*, 1794; *The Italian*, 1797. **R.**, John (1658-1714), Eng. physician; M.P., 1690-1711; bequeathed property for fndg. 2 medical travelling fellowships, etc., to Univ. College, Oxford, and further funds employed to the R. observatory, hospital, and library, Oxford, and to extend St. Bartholomew's Hospital, London.

Radcliffe, tn. in Lancs, Eng.; pop., 24,700; cotton, coal, iron.

Radek, Karl (1885-), Russ. Bolshevik politician; took part in revn., 1917 and in Brest-Litovsk negotiations, 1918; in Ger., 1919 and 1923, where he lost influence; Rector, Chinese Univ. in Moscow, 1921; expelled to Vologda 1927, for opposing Stalin; later, chf. leader-writer Russ. offic. journal *Izvestia*.

Radetzky, Josef, Ct. of Radetz (1766-1858), Austr. F.M.; as cmdr. of Austr. Army in Italy, 1848, checked insurrectionary movement (Custoza, Novara). **R. March**, by Johann Strauss, senr., is dedic. to him.

Radial artery, artery, beat of wh. can be felt at wrist, $1\frac{1}{2}$ in. from base of thumb (*see* PULSE). **R. nerve**, may be paralysed in cases of lead-poisoning, causing *wrist-drop*.

Radiant heat baths, for treatment of lumbago, chronic arthritis, sciatica, etc.; electric incandescent lamps as heating agents. Baths may be used for the whole body or separate limbs, their value depending on hot air and light rays emitted.

Radiation, 1) (phys.) energy appearing in form of electro-magnetic waves (elec., heat-, light-waves, X-rays) caused by vibration of electrons or vibrations within atomic nucleus (X-ray). *Pressure of r.*, due to R. of all kinds on bodies exposed to it; pressure of sun's light on very small particles may exceed its gravitational action on them. Arrhenius (*q.v.*) suggested that living germs may thus be transported thr. space. 2) (Meteorol.) Nocturnal loss by earth of surface and atmospheric heat absorbed into space.

Radiator, internally heated metallic object having large surface facilitating transference of heat to surrounding air. For heating rooms, number of flat-section pipes heated by steam or hot water;

for cooling motorcar engine, fine hollow-walled, honey-comb structure of thin sheet-copper, through which cooling water is circulated.

Radič: *see* RADITCH.

Radical, in polit.; a party advocating root-and-branch reform; in U.S.A., generic term for "left wing" (*q.v.*); in Gt. Brit., chf. advanced wing of Liberalism (*q.v.*).

Radicals, groups of atoms unable to exist other than in combination in a molecule with other groups or single atoms; e.g., NH_4 (ammonium), CH_3 (methyl).

Radio: *see* WIRELESS TELEGRAPHY. **R-activity**, (phys.) disintegration or "decay" of some chem. elements (uranium, thorium, radium, potassium, etc.); a certain propor. of the atoms explode spontaneously in a given time (50% of radium atoms in 4,500 years), with emission of α -, β -, and γ -rays, and formation of new element (radium changes to radium emanation, a gas of argon family). α -rays are positively charged helium atoms, velocity $\frac{1}{10}$ that of light; β -rays are electrons (*q.v.*) veloc. up to $\frac{1}{10}$ of light; γ -rays are very hard X-rays (*q.v.*). All rays ionise gases and affect photographic plates; α - and β -rays are deflected by magnet; γ -rays are not, α -rays produce flashes on fluorescent screen, and can thus be counted singly; on striking nucleus of other (non-R.-A.) atoms, latter may burst and be charged into other elements. All radio-active elements are "descended" from uranium or thorium. Applications: treatment of cancer and rheumatism; luminous paint. **R-compass**, *frame aerial* (*q.v.*), wireless receiver, the aerial being rotatable against a scale of angular degrees; object being to estimate direction of a transmitting station by rotating aerial until reception ceases.

R.-gramophone, gramophone combined with wireless receiving-set and elec. pick-up, used in place of sound box; vibrations of needle cause very feeble induced currents, wh. are fed into amplifier and so to loud-speaker. *Pick-ups* (*q.v.*) of various types.

Radiolaria, unicellular marine Sarcodina,

Radiolaria

which secrete silica skeletons of various shapes.

Radiometer, (phys.) "light mill" invented 1874 by Sir Wm. Crookes; vanes of aluminium or thin mica blackened on one side; attached to vertical spindle inside an exhausted bulb; heating of vanes by light on black side causes them to revolve. Effect not due to "pressure of radiation" but to residual gas in bulb.

Radioscope, apparatus for direct examination of objects and human body by X-rays (*q.v.*). The rays throw a shadow of the object onto a screen coated with barium platino-cyanide, which fluoresces brightly where the rays strike it. Used for medical and anatomical examination.

Radiotherapy, treatment of disease by means of radio-active substances, e.g., X-rays, radium.

Radish, *Raphanus*, cruciferous plant with a thick root; wild radish, *R. raphanistrum*, is yellow flower with purple veins; cultivated variety, *R. sativus*, used as a relish.

Raditch, (*Radič*) Stjepan (1871-1928), Yugoslav statesm., leader Croatian Peasants' party; murdered in Paris. by Serb deputy.

Radium, chem. element, sym. Ra; at. wt. 225.97, m.p. 700°C.; discovered by Prof. and Mme. Curie (1898); occurs in pitchblende and other uranium-contg. ores in Cornwall, Belgian Congo, and Ontario. Exhibits radioactivity (*q.v.*). In treatment of cancer R. screened with lead so that γ rays only penetrate. *Radon* (R. emanation, niton) at. wt. 222, also radioactive, and used for malignant disease. R. costs c. £20,000 per gm., assayed by comparison with standards kept in London, Paris, and Vienna. Used also for luminous paint.

Radius, *r* (math.) half the diameter of a circle.

Radius Vector, distance betw. any point on a curve, and a fixed point within it, e.g., R.V. of parabola (*q.v.*) 2) (Anat.) External bones of the forearm; extend from elbow to wrist, and lie to the thumb side of the forearm. **R. of gyration**, (mech.) of solid disk or cylinder = $\frac{1}{2}$ moment of inertia (*q.v.*) divided by mass.

Radley College, College of St. Peter, at Radley, nr. Abingdon, Berks; Eng. public school for boys, fndd. 1847; c. 340 boys.

Radnorshire, inland co., centr. Wales; area, 470 sq.m.; pop., 21,300 (English-speaking); high moorland (*Radnor Forest*, 2,186 ft.); watered by Riv. Wye; mainly pasture (stock-raising, Welsh ponies); min. springs at Llandrindod Wells; co. tn., *Pres-tcign*.

Radom, tn. in prov. Kielce, Poland; pop., 78,000; tanneries and leather industries.

Radon: *see* RADIUM.

Radoslavov, Vasil (1854-1929), Bulg.

statesm.; Pr. Min., 1913-18; alliance with Centr. Powers to gain Macedonia.

Raeburn, Sir Hy. (1756-1823), Scot. portrait painter; R.A., 1815; known as "The Scottish Reynolds."

R. A. F., abbr. Royal Air Force.

Raff, Joseph Joachim (1822-82), Ger. composer; symphonies, sonatas, etc.

Raffia palm, tree found in E. Africa, leaf stalks of wh. are used for *R. fibre*, hemp-like fibre sometimes used in upholstery, etc., and *R. bast*, for tying up garden plants.

Rafflesia, giant Malaysian, evil-smelling, parasite flowers, freqtly 3 ft. in diameter; named after Sir Stamford Raffles.

Raffles, Sir Stamford (1781-1826), Brit. administrator; E. India Company bought Singapore (*q.v.*) at his suggestion, and he was its first governor, 1819.

Rag-frame, **ragging-frame**, used in ore-dressing (*q.v.*) to separate the heavy and valuable minerals from the light in the "slimes" (*q.v.*), or very fine suspensions in water, which are allowed to flow over a suitably inclined table in such a way that the heavy particles settle on the table while the light are carried off.

Ragged-robin, *Lychnis flos-cuculi*, wild herb of Europe and N. Amer., with pink flowers and reddish, hairy stems.

Ragged school, charitable institution for clothing, feeding, and training destitute children; 1st Eng. R.S. started at Portsmouth by John Pounds, 1819; movement carried on by R.S. Union (fndd. 1844), Thos. Guthrie (1803-73), Mary Carpenter (1807-77), and others, till superseded by industrial school system (1st Industr. School Act, 1857), and spread of educ. after 1870.

Raglan, loose overcoat having sleeves cut in one piece with collar and no shoulder-seams. Named from 1st. Bn. Raglan (1788-1855), who fought at Waterloo and commndd. Brit. troops in Crimean War.

Ragoût, highly seasoned stew.

Rag-time, strongly syncopated music as in Negro dances and songs. See *jazz*, SYNCOPATION.

Ragusa, 1) see DUBROVNIK. 2) Tn. in prov. of Syracuse, Sicily, divided into Upper and Lower Ragusa; total pop., 33,000; ag. vineyards.

Ragwort, Europ. weed, resemb. groundsel, c. 2 ft. high, with bright yellow flowers; name also applied in Amer. to other allied species, esp. *Golden ragwort*.

Raikes, Robt. (1735-1811), Eng. educationalist; printer and publisher of *Gloucester Journal*; originated modern Sunday-schools at Gloucester, 1780.

Rail, fam. of birds, esp. *landrail* or *cor-crake* (*q.v.*) and *water-rail* or *skiddy*, with reddish bill and olive-brown and grey plumage, found in marshy districts throughout N. Temperate regions.

Rails, bars on which flanged wheels of railway vehicles run. **Bull-head r.**, hel by chair (*q.v.*) used in England, and part of Continent of Eur. **T r.**, spiked t sleepers, used in America and elsewhere. **Gauges** (*q.v.*) and shape standardised. length of single rail, 30 to 40 feet. Rail joined by *fish-plates*; allowance made for expansion by leaving small space betw. each successive rail. **Tramway r.**, embedded in road pavement, are often welded end to end.

Railway, road for vehicles having parallel metal rails for wheels, with flanges which keep them on rails. First used early 19th cent., with horses and steam locomotive.

Railway Buffet Car, Bar

Railway vehicles, rolling stock of a rly. line: *passenger carriages*, coaches, or cars, of many types; long cars have two 4-wheeled bogies (q.v.); *Pullman cars* are not divided by partitions and are entered from end; *sleeping cars*, divided into cubicles; *corridor cars* have connecting passage from end to end and the separate units are connected by flexible bellows at either end. Weights betw. 25 and 45 tons. *Goods trucks*, wagons, or vans, of all sizes; British are smallest type and suffer from disproportionate wt. of wagon as compared with load; 5-ton wagon carries only 6 tons of coal, whereas 35-ton wagon carries 100 tons. Average capacity: Britain, 10½ tons; continental, 20-40 tons. Half of British wagons privately owned. Special types: tank wagons for liquids, refrigerator wagons for food; horse boxes, cattle trucks, etc.

Rain, atmospheric moisture condensed by cooling, forming drops of water around nucleus of dust, and falling to earth's surface after becoming too heavy for atmosphere to support. **Rainbow**, arc showing colours

of spectrum in concentric bands formed in sky opposite sun, or moon (*lunar rainbow*), by refraction and reflection of its light through falling drops of rain; identical effect produced by spray of waterfall, etc. **Secondary rainbow**, larger, similar arc above rainbow, with order of colours reversed by double refraction and reflection. **Rainfall**, amount of precipitation (q.v.) from atmosphere over specified area, or at given place during given period, as measured by rain-gauge (q.v.). Classified as: *Convectional*, falling in equatorial belt every afternoon; *relief*, result of moisture-laden winds being forced upward into cooler air by striking mountain side; *cyclonic*, result of wind from all sides being forced up after having filled an area of low pressure. **Distribution of rainfall**: *Wet areas* (over 40 in. annual

Rainier, Mount, extinct volcano of Cascade Range, Washington, U.S.A.; 14,408 feet.

Rainy, Lake, on frontier betw. Minnesota, U.S.A., and Canada, 345 sq. miles.

Raised beaches, orig. sea-beaches, now raised above sea-lvl. to various heights and, in many cases, far from sea-coast; due either to the rising of the land or sinking of the sea.

Raisins, dried grapes from Mediter. countries and Asia Minor; *grape-raisins*, *berry-raisins*: large, light, and stoneless; *sultanas*: large, long-shaped raisins.

Raison d'état (Fr.), reason of State; **raison d'être**, reason for existence.

Raisuli, Mulai Ahmed-er- (1868-1925), Moroccan sharif and leader of insurgents agst. Europ. rule, 1916-1925.

Rajah, Raja, title of a Hindu prince. *Maharajah* prince of greater importance; head of a confederacy of rajahs.

Rajputana, collectn. of 21 Indep. States, N.W. India (128,950 sq.m.), under an agent of the governor-general; includes Jaipur, Jodhpur, Udaipur, Bikanir. Desert of Thar forms a large part of area. Pop., 9,844,385; mostly Hindu. Cap., *Ajmer*.

Rajputs, aristoc. natives of Rajputana, and Oudh, of obscure origin; arose 8th cent. A.D.; claim descent fr. orig. Kshatriyas ("of the royal stock"), the warrior caste of the Hindus; assimilated many fighting clans and till Moham. conquest (late 12th cent.) most powerful rulers in India.

Rake, (agric.) 1) long-handled garden tool for gathering together loose grass, weeds, etc., and smoothing surface of soil. 2) Horse drawn implement with curved prongs for raking hay. 3) (Gaming) Small wooden implement used by croupier to draw in stakes won by bank at a gaming-table.

Raleigh, Sir Walter (1552-1618), Eng. navigator, named Amer. settlement "Virginia" in honour of Qn. Elizabeth; introd. potato and tobacco; exec. on charge of high treason preferred by Jas. I in 1603; pubd. essays, etc., and *History of the World*.

Sir Walter Raleigh

R., Sir Walter (1861-1922), Eng. critic and man of letters; *The English Novel*, 1894; *Shakespeare*, 1907; *Romance*, 1917.

Raleigh, cap. North Carolina, U.S.A.; pop., 37,400; Negro univ. (1865); cotton.

Ralik Islands, see MARSHALL IS.

Rallentando, (mus.) abbr. *rall.*, gradually slowing down.

Ralph Roister Doister, comedy by Udall (q.v.), 1540, in doggerel verse, after manner of Plautus; perhaps acted by Eton boys while Udall was still headmaster.

Ram, 1) uncastrated male sheep. 2)

(Mech.) kind of water-pump working automatically, pumping to a high level a small propor. of a low-pressure waterstream. This enters a pipe and flows more and more rapidly until rush of water closes a valve; inertia of moving water thus stopped generates a high pressure, and some of it escapes thr. a 2nd valve, wh. lifts under the pressure; this is led to a tank at high level. When flow ceases, main stream flows again and process repeats itself.

Ram, Antique Bronze

Rama, (Hindu myth.) incarnation of the god Vishnu, hero of the ancient Indian legend, *Ramayana*.

Ramadan, 9th month of Mohammedan year, during wh. complete fast from food and drink is observed from sunrise to sunset; as Moham. year is lunar, it falls successively at all seasons of solar year, e.g., in 1927, 5 Mar. to 4 Apr., in 1933, 18 Dec. to 16 Jan., 1934.

Ramah, Rama, (O.T.) 1) b.-place of Samuel (I Sam. i). 2) City, N.W. of Gennesaret.

Ramayana, histy. of Rama (q.v.); great epic poem of anc. India; 24,000 stanzas; dating from c. 5th cent., A.D.

Rambouillet, Catherine, Marquise de (1588-1665), held literary salon.

Rambouillet, tn., N. France, dépt. Seine-et-Oise; pop., 6,270; remains of 14th-cent. château; res. of Louis XVI.

R.A.M.C., abbr. Royal Army Medical Corps.

Rameau, Jean Philippe (1683-1764), Fr. composer, and writer on theory of music; *Hippolyte et Aricie*, 1733; *La Princesse de Navarre*; *Traité de l'harmonie*, 1722.

Ramekin dishes, small china individ. dishes for serving eggs, soufflés, or other delicacies.

Rameses, Kgs. of Egy. 1300-1100 B.C. **R. II**, is probably the Pharaoh of Jewish oppression.

Ramie, fibre from plant *Boehmeria nivea*, E. Indian nettle-like plant; also called China grass and rhea; cultivated for its strong, silky fibres, which are spun and woven.

Ramillies, tn. in prov. Brabant, Belgium. *Battle of Ramillies*, 23 May, 1706; victory of the English, under Marlborough, over the French and Bavarians.

Ramón y Cajal, Santiago (1852-), Span. histolog. and patholog.; Nobel Prize

Mummy of Ramses II

Lord Rawlinson

Rawtenstall, munic. bor., N.E. Lancs; pop., 28,600; cotton-mills, woollens, stone quarries.

Ray, 1) (phys.) according to modern physics, a ray may be described as a stream of particles in rapid movement. Particles are of three kinds: *photons*, which constitute light rays, and move with constant velocity (see LIGHT); *electrons*, which constitute cathode rays (*q.v.*), and β -rays of radio-active bodies (*q.v.*); *atoms of matter*, which constitute canal rays (*q.v.*) and the α -rays of radio-active bodies, these being atoms of helium; velocity of these varies widely. All rays have also wave-like properties; in case of light, these were discovered first, and hence light was formerly regarded as a pure wave motion, a ray of light being considered as an abstraction. Discovery of diffraction (*q.v.*) of electrons and canal rays shows that these have also wave-like properties. A *beam* is a bundle of rays of considerable section; a ray is regarded as of negligible area. 2) The skate, a flat, somewhat triangular-bodied elasmobranch fish, allied to sharks and dogfish. Several species, including the thornback, common skate, and cuckoo ray are abundant round British coasts. The largest and most hideous are the so-called *eagle-rays*, *devil-rays* and *sting-rays* of tropical seas, some being up to 40 ft. in circumference.

Ray

See ELECTRIC RAY.

Rayleigh, John William Strutt, 3rd bn. (1842-1919), Eng. physicist; with Ramsay, (*q.v.*), disc. argon gas; Nobel Prize (Chem.), 1904.

Raynaud, Maurice (1834-81), Fr. physician; **R.'s disease**, characterised by numbness and sometimes gangrene of the fingers and toes.

Rayon, kind of artificial silk.

Razorbill, N. Atlantic sea-bird, resemb. guillemot, but with larger, furrowed bill and wedge-shaped tail.

Rb, (chem.) symbol of rubidium (*q.v.*).

R.B.A., abbr. Royal Society of British Artists.

Ré, île de, isl. (33 sq.m.), off the W. coast of Fr.; part of dépt. Charente Inférieure; cap., *St.-Martin-de-Ré*, on N. coast; pop., 10,030.

Reaction, 1) action in response to stimulus; change resulting from physical or mental influence; reciprocal or reflex action. 2) (Chem.) change in substance produced by contact with another or by exposure to heat, light, etc.; see REAGENTS. 3) (Med.) Physical or mental exhaustion or ebullience prod. by contrast with their opposites. 4) (Politics, etc.) Revulsion of feeling agst. a revolution, or agst. progress in thought, religion, or politics. 5) (Psychol.) Sensation and movement in response to a stimulus or suggestion; mental consequence of extreme emotional experience. **R. turbine**, utilises recoil of a jet of water or steam; see TURBINE.

Grimm. **R. River**, tribut. of Mississippi, 1,275 m., flows through Texas and Louisiana. 2) R. R. of the north, 5 m., flows through Minnesota to Lake Winnipeg, Canada. **R. Russia**, before World War, division of Poland (Galicia, Podolia, Volhynia, and parts of Silesia and Lublin), inhabited by Ruthenians (little Russians and Red Russians). **R. sandstone**:

SANDSTONE. **R. Sea**, a dividing Africa and Arabia and connecting Gulf of Aden (Indian Ocean) with Mediterranean; extends from Strait of Bab el Mandeb in S.E. to Gulf of Suez and Canal in N.W.; length, 1,456 m.; breadth, 10-250 m.; max. depth, 7,875 feet. Numerous coral reefs and isls. make navign. dangerous. Heat intense. Important trade route: steamers betw. Europe, S. and E. Asia, and Australasia. **R.-short**, (tech.) brittleness of red-hot iron owing to presence of sulfur. **R. shift**, (phys.) in Einstein's Relativity Theory, displacement of spectrum lines of chem. elements towards the red under influence of gravitational field. **R. silver**, designation of two ores containing large quantities of silver; **dark r.s. ore**, antimony sulphide, or pyrrargyrite; **light r.s. ore**, sulphide of arsenic, or proustite. **R. snow**, snow in high mountains and arctic regions, 1. appears red owing to presence of masses small algae (*q.v.*).

Redcar, munic. bor. and seaside resort, N. Riding, Yorks, Eng.; pop., 20,200.

Redditch, urb. dist., E. Worcs; pop., 1,300; manuf. needles, fish-hooks, motor-cars.

Redemption, 1) (relig.) (Lat. "buying back") restoration by Christ of mankind to communion with God from bondage of sin; doctrine that Christ took upon Himself, and by His death made to God vicarious satisfaction for the sins of the whole world. 2) (Stk. Exch.) repayment of a loan; bonds are usually redeemed at fixed dates, or during a fixed period; they may be drawn (see **DRAWINGS**) for R., e.g., British 4% *Victory Bonds*. **Redemptorists**, R.C. relig. order founded by Alfonso dei Liguori, 1732, for preaching to, and teaching, the poor and outcast.

Redhill, tn., Surrey, adjoining and included in Reigate (*q.v.*).

Rediscounting, (finan.) transference of

bills purchased (discounted). **Discount Houses** rediscount bills bought by them at Bk. of Eng. when funds borrowable from Jt.-Stk. Bks. are scarce. In U.S.A., R. with Fed. Reserve Bks. is reg. procedure and not confined to occas. when borrowings from Jt.-Stk. Bks. have been called in. See **DISCOUNT**. **Rediscount rate** (or **Bank Rate**), ann. interest at wh. centr. bank will R. bills; influences discount market.

Redmond, John Edw. (1856-1918), Irish politician; M.P., 1881-1918; champion of Home Rule; accredited leader of Parnellites, 1890; chmn. of Nationalist party, 1900; took part in Buckingham Palace Conference, July, 1914; declined seat in Asquith's Coalition ministry, 1915; urged Irish support of Engl. in World War; opposed Sinn Fein.

Redolet lucernam (Lat.), it smells of the lamp; phrase applied to literary or other work which shows evidence of laboured workmanship.

Redondilla, early verse form in wh. 1st and 4th, and 2nd and 3rd, lines of stanza rhymed; later, in Span., applied to verses of 6 or 8 sylls. with rhyme, or assonance only.

Redoubt (Fr.), enclosed strong point in a fortified zone.

Redruth, urb. dist. and mkt. tn., Cornwall; pop., 9,900; tin and copper mines.

Redshank, Old World shore bird, *Totanus calidris*, allied to the plovers (*q.v.*), with brownish upper and white lower parts and bright orange-coloured legs and feet. **Redskin**, Amer. Indian. **Redstart**, small Passerine bird; summer migrant. Wide European range from N. Scandinavia and Gt. Brit. to Mediterranean; winters in Africa and Persia. Bright, ruddy, and greyish black plumage; white forehead; female brownish grey.

Reducing agent, (chem.) substance that readily takes up oxygen, chlorine, and other electro-negative elements. Hydrogen and carbon are powerful R.a.'s at high temps. and are used to reduce oxides and sulphides of metals. In solution, ferrous salts, sulphites, pyrogallol, and generally all photographic developers are reducing agents. **R. valve**, (tech.) applied to a source of high-pressure gas or liquid, delivers same at a constant lower pressure.

Redwing, species of thrush (*q.v.*), a winter visitant of the Brit. Isles; under-wings bright orange-red; conspicuous white streak above the eyes.

Redwood, general term for various trees having reddish timber and yielding a red dye; esp. the Californian giant *Sequoia* or *Welling-tonia*.

Reed, 1) general name for grass-like plants growing in marshy places. 2) (Mus.) Part of many mus. instr. wh. produces the note (e.g., organ, harmonium, clarinet, oboe,

bassoon). A tongue of cane or metal over a slot periodically interrupts stream of air; no. of interruptions gives pitch of note. **R.-buck** (*Waterbuck*), Afr. antelope, characterised by long sub-lyrate ringed horns of the males. **R.-mace**, cat's-tail, *Typha Latifolia*, aquatic plant, grows 8 ft. high, with club-like flower spike. Sometimes wrongly called bulrush. **R.-warblers**, small passerine birds of the family *Sylviidae*, widely distributed throughout Old World. Many familiar summer migrants to England, e.g., nightingale, willow-warbler, blackcap, reed marsh, sedge-, and grasshopper-warblers. All expert nest-builders and sweet singers.

Reef, (naut.) to reduce surface of sail by tying up lower portion.

Reel, Scot. nat. dance for 2 or more couples (4-some, 6-some, 8-some), mus. prov. by bagpipes or fiddle.

Reeve, r) (ornith.) female of ruff (q.v.). 2) Early Eng. (and modern Canada), chief magistrate of a town.

Reeves, John Sims (1818-1900), Eng. tenor singer; minor parts, Drury Lane, 1841-43; début in Ital. opera, as Edgardo in *Lucia*, Scala, Milan, 1847; foremost Eng. singer of period: apprd. in opera, oratorios, etc.

Re-examination, (leg.) third examination of a witness, by counsel for own side. (Examination, cross-ex. by opposing counsel, then re-ex.).

Refectory, (archit.) dining room, esp. of a monastery or college.

Refectory

Referee, one appointed to supervise a sport or game and see that the rules are observed. (See also UMPIRE). **R.s' court**, division of Eng. High Crt. to wh. mercantile cases involving complicated transactions and accounts are referred.

Referendum, popular vote on proposed law. Constitu. requirement in some countries for certain laws, or may be spec. ordered by legis. if doubtful of electoral support.

Refine, (tech.) to remove impurities from raw materials. *Metals* by electrolysis, e.g., copper, lead, zinc; *sugar* by treatment with lime, animal charcoal, etc.

Reflation: see INFLATION.

Reflection, (phys.) throwing back of waves of light and sound by surfaces of bodies. *Law of R.*, of light: angle of incidence equals angle of reflection.

Reflector, r) any mirror set behind light source to throw light in desired direction. 2) Astron. telescope with parabolic mirror. 3) Parabolic mirror in searchlight for collecting light.

Reflex, movement following a sensory

stimulus without participation of the will and resulting from nervous pre-arrangement, e.g., adjustment of the eye to the distance of an object.

Reformation, (relig.) movement at beginning of 16th cent., developed from seed sown in 14th cent. by *Wycliffe* and *Huss*, directed to purification of Western Christianity from alleged corruptions of R.C. Ch.; particularly sought to replace authority of the Ch. and tradition by exclusive appeal to Scriptures; initiated by Luther's denunciation of sale of indulgences, 1517; spread rapidly in Ger. and throughout N. and Centr. Europe; produced numerous reformed or *Protestant* (q.v.) sects and nat. churches (e.g., Calvinists, Huguenots, Zwinglians); reached Eng. c. 1530, when Henry VIII assumed title "Supreme Head of Ch. of Eng."; extension checked after Council of Trent, 1563, by R.C. revival known as *Counter-Reformation* (q.v.).

Reformatory Schools, institutions for industrial training of juveniles (under 16 yrs.), convicted of criminal offences; limit of detention, age of nineteen. *First Ref. Sch. Act*, 1854.

Refraction, (phys.) of light (also sound and electro-magnetic waves); change in direction of propagation by passage from one medium to another, or in same medium betw. parts of diff. density; e.g., light rays passing from air to glass or water are not bent unless they strike surface of latter obliquely; they are then bent away from it. *Law of r.*, angles of incidence and reflection are measured betw. direction of ray and the perpendicular to surface; the law says that ratio of the sines of these angles (*the refractive index*) is constant for any 2 media but diff. for light of diff. colours, red being the most *refrangible*, violet least. **Effects of r. of light**, light from heavenly bodies is bent in passing thr. air owing to varying density of same, hence apparent displacement; sun visible after it has set. Lenses and prisms depend upon refraction. Brilliance of precious stones and paste substitutes depends upon high *refractive index*.

Refraction

Refractor, astron. telescope with lens objective glass, forming image by refraction (q.v.).

Refrain, burden or chorus recurring at end of each division of poem.

Refrigerator, machine for lowering temperature. Two principal systems depending: 1) on absorption of heat by compressed gas expanding with performance of mechanical work, 2) on heat absorbed by evaporation of liquid, usually sulphur dioxide or ammonia gas under pressure. For large installations,

brine or strong calcium chloride is cooled and circulated, e.g., in cold-storage chambers,

breweries, etc. Recent progress consists in using exact temperature and air composition

(moisture, carbonic acid) most suitable for preservation of food (fruit, meat), flowers, etc., by cold storage.

Refuge, Cities of, (O.T.), 6 cities, 3 E. and 3 W. of Jordan, set aside for protection of manslaughter as distinct from murderers; incldd. Ramoth-Gilead, Shechem, and Hebron.

Refuse, waste matter, garbage. **R. disposal** effected by town authorities; usu. after prelim. screening or sorting, R. may be dumped at sea (cheap, but difficult in bad weather); pulverised and sold as fertilizer; tipped (cheap, but very insanitary owing to breeding of flies and rats); incinerated in *destructor*, which may be fitted with steam boilers. Slag (q.v.) may be used as fertilizer or for making building blocks. Tin cans may be stripped of metallic tin by chlorine gas; they are usually baled in hydraulic presses and sold as "scrap."

Regalia, collective name for symbols of royalty (crowns, sceptres, swords, etc.).

Regatta, organised series of sporting events for rowing- and sailing-boats, canoes, etc.

Regelation, re-fusing together of bodies of snow or ice having wet surfaces, although the temperature is not below freezing-point; caused by pressure; a phenomenon of glacier movements, exemplified also in the formation of a snow-ball.

Regency, style of French art in early 18th cent., during minority of Louis XV.

Regeneration, (biol.) renewed formation of lost limbs or parts, in plants and (esp. lower) animals; also in man, e.g., formation of destroyed tissues, re-growth of nails, hair.

Regenerator furnace (Siemens), saves heat of spent gases from gas-fired furnace, by passing them thr. one of two regenerators, brick chambers filled with network of bricks, wh. take up heat of gases. When hot, gases are switched over to 2nd regenerator, while unburnt gas and air are passed thr. 1st regenerator, taking up heat stored there.

Regensburg: see RATISBON.

Regent, governor in place of sovereign prevented from ruling by minority or mental or physical disability. **R. Street**, one of the princ. streets in W. district of London; first laid out (1813) as a route for the Prince Regent betw. Carlton House and Regent's Park. Originally designed by John Nash with a semi-circular quadrant and colonnade. Since 1920 the street has been entirely modernised and rebuilt. **R.'s Park**, in Marylebone, N.W. London, on site of anc. royal hunting-ground. Laid out by John Nash for the Prince Regent (aftwds. George IV) and opened to the public 1838. Roughly circular, covering c. 412 ac. with road encircling outer edge, known as Outer Circle. Grounds incld. park-land, a boating lake, flower beds, tennis-courts, etc.; also, Bedford Coll., for women, attached to London Univ. (q.v.) and moved from Baker St., 1913; St. Dunstan's Lodge, built (1830) for Marq. of Hertford and used as St. Dunstan's Hostel (q.v.) until 1923, when institu. moved to St. John's Lodge, also in Regent's Park. In the N.E. corner are the Zoological Gardens (q.v.).

Reger, Max (1873-1916), composer of polyphonic mus. for organ, orchestra, chamber, and piano; songs, choral works.

Reggio di Calabria, tn. and dist. cap., on Str. of Messina, S. It.; pop., 130,000; R.C. abpric.; vine and olive cultivation; silk trade. Partially destroyed by earthquake in 1908.

Reggio nell' Emilia, tn. and dist. cap., N. It., on Riv. Crostolo (rt. trib. of the Po); pop., 90,000; locomotive works.

Regillus, Lake, in Latium, It. (exact site undetermined), scene of battle between Romans and Etruscans (c. 496 B.C.) which won for former hegemony of Latium.

Regiment, body of troops: cavalry R., tactical unit about 600 strong, commd. by a Lt.-col. Infantry R., 2 or more battalions, commd. by a col.; displaced as tactical unit in Brit. Army by the brigade.

Regina, cap. of Saskatchewan, Canada; pop., 53,050; indust. centre; rly. junc.; W. hqrs. Roy. Can. Mounted Police.

Register, 1) alphabetical index. 2) (Mus.) Stop, row of organ-pipes having the same tone colour; organ has many Rs.; their use ("draw stops") depends on the artistic judgment of the performer; also, the compass of an instr. or voice.

Registration, 1) Entry or record, e.g., of births, marriages, deaths, etc. 2) (Post.) Offic. record of the dispatch of a packet, receipt being given to sender, and obt'd. from addressee. Minimum fee of 3d ensures compenstn. for loss up to £5; special fees charged for insur. of articles of greater value. **R. Acts**, Acts of Parl. dating from 1836 establg. compulsory R. of births, deaths, and marriages in Gt. Brit., under control of Registrar-General. **R. of business names**, requirement in Eng. law (Act of 1916), providing for registration of business names of all firms not appearing under the true name or names of its individual members.

Regium donum, or royal gift, former annual grant, from reign of Charles II, from public funds, orig. to Presbyt. clergy in Ireland, later extended to certain Noncon. ministers in Gt. Brit. also; discontinued by repealing Acts, 1869.

Regius professor: see PROFESSOR.

Regnault, Henri Victor (1810-98), Fr. physicist and chemist.

Regula fidei (Lat.), rule of faith, R.C. doctrine that relig. faith must be grounded upon the Holy Scriptures and the traditional teaching of the Church.

Regular army, standing army. **R. system**: see CRYSTALS.

Regulus, 1) Marcus Atilius (d. c. 250 B.C.), Rom. gen. in 1st Punic War. 2) 1st. magn. star, α in constell. Leo; see PL., ASTRONOMY, N.C.H., D.

Rehoboam, (O.T.) son and succr. of Solomon; Kg. of Judah (975-957 B.C.); at his accession 10 northern tribes seceded to form kgdm. of Israel under Jeroboam (q.v.).

Reich, (Ger., *Empire, Realm*), the Ger. Confed. of States. **Rs. mark**: see MARK. **President of R.**, since 1919 head of Ger. State, elected by whole pop. for 7 years; any Ger. eligible after his 35th year. First President, *Ebert*, 1919-25; 2nd, *von Hindenburg*, 1925, re-elected 1932. **R.sbank**, Centr. B. of Ger., fndd., 1875, as centr. issuing bank; reorgnsd. 1924, according to Dawes Plan (q.v.); foreign influence removed by Young Plan (q.v.), 1930; Berlin and 455 branches. Excl. right to issue *R.B. notes*, of wh. 40% must be backed by gold and foreign exch.; declares bank rate; obliged to discount 3 months' treasury bills for govt. up to 400,000,000 R.M. **R.sbanner** (Black-Red-Gold), Ger. polit. organistn. inaug. 1924 to combat rising Nazis and Monarchists crushed by Nazi regime, 1933. **R.sland**, designatn. of Alsace-Lorraine (q.v.) when in

possn. of Germany, 1871-1918. **R.stad.**, Duke of: see NAPOLEON II. **R.stag.**, part of Ger. Emp. since 1871 (precursor: *German Diet*, 1867); elected by general, equal, direct, and secret vote, orig. for 3 yrs.; since 1888 for 5, since 1919 by proportional vote for 4 years. No. of members up to 1918, 397; now varying accdg. to no. of voters. **President of the R.stag.**, elec. by R. to direct its meetings; controls management, police supervision, and expend. of houses of parliament. **R.swehr** (Ger., *State Defence*). The Ger. Army (*Reichswehr*) and Navy. Army reduced to 100,000, Navy to 15,000, by Treaty of Versailles; 12 years' service; no conscription, no general staff, no heavy artillery or tanks.

Reid, Thomas (1710-96), Brit. philos.; fndd. "Scottish School" (q.v.); *Essay on the Intellectual Powers of Man*, 1785; *Essay on the Active Powers of the Human Mind*, 1788. **R., Thos. Mayne** (1818-83), Brit. writer of tales for boys; traded on Red Riv. and Missouri, 1838-43; capt. in U.S. Army agnst. Mexico, 1846-47; *Rifle Rangers*, 1850; *Scalp Hunters*, 1851; *White Chief*, 1852. **R., Whitelaw** (1837-1912), Amer. journalist and diplomat; edit. *New York Tribune*; ambass. to Gt. Britain, 1905-12.

Reigate, mun. bor. and mkt. tn., Surrey, Eng.; pop. (incl. adjoining *Redhill*), 39,600.

Reims: see RHEIMS.

Reincarnation, entrance of the soul, after death, into another human or animal body; belief common to Hindu religion and its derivatives (Buddhism, theosophy); taught in Greece by Pythagoras (q.v.) and became widespread among later Greeks and Romans; also commonly found in pagan cults; cf. METEMPSYCHOSIS.

Reindeer, large deer of N. regions of Old World; both sexes bear large branching antlers; heavily built, with short limbs and main hoofs widely separable; domesticated in large herds for draught, food, etc. N. American variety is the so-called caribou.

Reindeer

Reinhardt, Max (1873-), Ger. theatrical manager; fndd. *Kleines Theater*, Berlin, 1902; director of *Deutsches Theater* (Berlin), 1905-20; in Engl. prod. *The Miracle*, London, 1911-12; *Oedipus Rex*, 1912; leader in new and spectacular school of dramatic production.

Re-insurance, passing on of responsibility (or part of same) of an insur. contract by orig. insurer to another party in order to minimise risk to one insurer by spreading liability amongst several.

Rekha - A symbol of inspiration

Réjane, pseudon. of *Charlotte Réju* (1857-1920), Fr. actress; opened Théâtre Réjane, Paris, 1906.

Rejuvenation, renewal of youth, arrest of senility. In modern therapeutics, stimulation of functional cells of body by injection of gland secretion taken from young human beings or apes; theory (practice still in experimental stage) propounded by Brown-Sequard, first acted upon by Voronoff (*q.v.*).

Relapsing fever, *Famine-fever*, acute infectious disease caused by spirochaetes, characterised by bouts of fever which usually last 5 or 6 days, disappear for the same time, and recur.

Relativity, 1) Theory of ("Special" Theory, 1905; general, 1915; Einstein). Based upon 2 experimental facts: *i*) absolute motion thr. space cannot be detected or measured; *ii*) Velocity of light is same whatever velocity of source relatively to observer. Some consequences: Mass varies with velocity—proved experimentally. Light subject to gravity *a*) deflected in passing through field; star image displaced owing to attraction of sun; *b*) spectrum lines displaced towards red (*see* RED SHIFT) in strong gravitational field. Proof doubtful. Time varies with velocity, likewise dimensions. Ultimate picture of universe is a structure in space of 5 dimensions, time being one of these: matter causes a curvature, wh. is the gravitational field: thus time and space are equivalent (Lorentz-Minkowski). 2) (Philos.) View that: *a*) It is only possible to apprehend the relation betw., not the entity of, things. *b*) True and false, good and bad are relative ideas, *i.e.*, dependent on circumstances, and that the intensity of a sensation is relative to the degree to wh. the mind is already occupied by that kind of sensation.

Relaxation exercise, one in which all muscles, etc., are relaxed; esp. useful in nervous disorders.

Relay, 1) a place for changing to fresh riding or carriage horses. 2) (Electro-technics) Device for causing a feeble current to switch or otherwise control a more powerful current, *e.g.*, feeble current received in cable or wireless telegr. or telcph. operates R. (triode valve, electro-magnetic, etc.) to feed strong current to loud-speaker, or retransmitter. **R. race**, usu. 1 m., betw. teams, usu. of 4, each man running $\frac{1}{4}$ m. Olmp. Games distances: 800 and 1,600 metres.

Relic, an object preserved and treasured as a memento of the past. In religion, portion of body of, or article associated with, a saint, preserved as object of relig. veneration and credited with miraculous properties.

Relief, 1) in sculpture and metal-work, the modelling of figures projecting slightly (bas-relief) or prominently (high relief) from a flat ground. In painting, the illusion of re-

lief is got by gradation of tones. **R.-printing**, method of reproduction in which the printing surface is in relief. *See* LINE, HALF-TONES; THREE-COLOUR PROCESS. 2) (Milit.) Troop taking over duties from others. **R. work**, work provided by local authorities (under *Unemployed Workmen Act*, 1905) for relief of unemployment.

Religion, 1) belief in a superhuman power or powers wh. govern the course of nature and human life, and are entitled to some form of worship. 2) Specif. system of such belief; doctrines concerning relations of man to God; developed from animism through polytheism to monotheism. 3) (R.C.) The monastic life. *Natural R.* considers God as manifested in nature; *revealed R.*, God as supernaturally manifesting Himself to man directly or through inspired intermediaries, as in Judaism, Christianity, Mohammedanism.

The religions of the world are distributed among the population in the following percentages:

Religion	Percentage of World Population
<i>Christians</i>	
Roman Catholics	17.91
Orthodox Catholics	7.78
Protestants	11.18
Total Christians	36.9
<i>Non-Christians</i>	
Jews9
Mohammedans	11.3
Buddhists	8.2
Hindus	12.43
Confucians and Taoists	18.9
Shintoists	1.35
Animists	7.3
Unclassified	2.75
Total Non-Christians	63.1

Of the Christian pop. of the world, 49% are claimed by the R.C.Ch., 21% by the Orthodox Ch., and 30% by the Protestant Churches.

Reliquary, receptacle to hold relics (*q.v.*) of saints, usually ornamented with carving, jewellery, or enamel.

Remand, (leg.) sending back into custody or on bail accused person, to allow of further inquiry.

Remarque, Erich Maria (1898-), Ger. author: *All Quiet on the Western Front*; excluded from Germany by Nazis, 1933.

Rembrandt, Harmensz van Rijn (1606-69), Dut. painter and etcher; m. Saskia van Uylenborch (portrait in Cassel); portrait of himself with Saskia, Dresden); portraits—*Jan Six* (1654)—group pictures, *Night Watch* (1642), etchings *Flight into Egypt*, *Landscape with the Three Trees*, etc.; etc.

Remigius, St. (c. 435-c. 523), Abp. of Rheims; baptised Clovis, Kg. of the Franks, 496.

Remonstrance, The Great, (Eng. hist.), 1691, statement of grievances presented by Parliament to Charles I.

Dutch Windmill, after Rembrandt

Remonstrants: see ARMINIANISM.

Remote control, (mechan.) control of machinery from a distance, as when valves, switches, gear-changes, etc., are operated by magnets energised by currents sent along wires or by wireless from a distance. Highest development is control of crewless ship, airship, or airplane by wireless.

Remscheid, tn., Düsseldorf, Ger.; pop., 102,500 (1921); cutlery centre (the German Sheffield).

Remus, with Romulus (q.v.), legend. fndr. of Rome.

Renaissance, revival of culture, starting in It. in 15th cent. and gradually penetrating all Eur. countries; greatly influenced by rediscovery of literature and art of classical antiquity; characterised in literature by spirit of free inquiry and criticism (Humanism); in architecture by return to classic orders; in sculpture and painting by study of human form and introduction of secular, esp. pagan, themes. Culminated in 16th cent. (Leonardo, Michelangelo, Raphael); thence degenerated into Baroque (q.v.).

Renan, Ernest (1823-92), Fr. orientalist; *Life of Jesus*.

Renfrewshire, co., S.W. Scot., on Firth of Clyde; area, 245 sq.m.; pop., 288,600; surface flat in E., moorlands in S. and W.; agric., dairy-farming, cattle; coal and iron, engineering, shipb.; ports include Greenock; largest tn., Paisley. **Renfrew**, county tn. and royal burgh; pop., 15,000. Pr. of Wales is Bn. Renfrew.

Reni, Guido (1575-1642), Ital. painter of Bolognese School; *Pietà*; *Mary Magdalene*; *Phoebus and the Hours Preceded by Aurora*.

Rennes, cap. dépt. Ille-et-Vilaine, Brittany, Fr.; pop., 83,500; abpric., univ., iron-foundry, textiles. Former cap. of Brittany.

Rennet, substance prepared from inner membrane of calf's stomach; contains *rennin*, a milk-curdling ferment which decomposes casein.

Rennie, John (1761-1821), Brit. civil

engineer and architect; drained marsh tracts on Solway Firth and in Eastern counties; constructed Waterloo, Southwark, and London bridges; concerned in building of harbours and docks at Grimsby, Hull, H.A. head, etc., and the East India and London docks on the Thames.

Renoir, Pierre Aug. (1841-1919), Fr. Impressionist painter: *The Box*; *Bathers*; *La Pensée*.

Rent, in economics, the income derived from land or any instrument of production by use or by requiring payment from another for its use, without relation to its orig. cost; in law, a periodical payment made by tenant to landlord for use of land or buildings. Rent not paid at stipulated time may be recovered without judicial process by distress, or seizure by landlord of tenant's goods. **Ground r.**, rent payable for use of land separately from buildings upon it. **Pepper-corn r.**, a nominal rent for premises held on long lease. **R. Restriction Acts**, Acts of Parl. from 1911 onward, restrictg. inc. of rent and mortgage int. for smaller residential properties. Similar enactments in most Eur. countries.

Rentenmark, first stabilised Ger. money after inflation (1923); now replaced in large measure by *Reichsmark*; all R. banknotes must be withdrawn from circulation by 1934.

Rentes (Fr.) govt. loans; interest-bearing stocks; income. **Rentier** (Fr.), person living on his income.

Rep, thick, corded, ribbed matl. of silk or wool or a mixture of both, used for curtains and upholstery.

Reparations, gen. term for liabilities placed by allied and assoc. Powers on Centr. Powers deftd. in World War. Acc. to the fundamental idea underlying it, these are in reparation for damage caused by Centr. Powers during war to civil pop. First determined at the Treaty of Versailles (q.v.). **London Conference**, 1921: 132 milliard marks to be paid in 37 years. **Dawes Plan**, 1924: re-arrangement of amount of yearly payments and method of levying, but with no decision as to total amt. payable. **Young Plan**, 1930: yearly payments reduced from those settled in Dawes Plan; payments spread over 59 years. (Capitalised present debt at c. 60 milliard). With int. and compound int., 114,5 milliard marks has to be paid by Ger. to allied Powers betw. 1930 and 1938. Betw. Sept., 1924, and Hoover Moratorium in summer of 1931, c. 8.7 milliard RM was paid. At Lausanne Conf. (1932) a total payment of £150,000,000 in bonds was agreed upon. **R. Commission**, inter-allied commission (1919-25) set up by Treaty of Ver-

Renoir

saïles to assess amt. of damages inflicted by Centr. Powers in World War, and to put provisions of treaty in force. See VERSAILLES.

Residuary legatee, person designated in a will to receive unallotted residue of estate.

Resins, amorphous, inflamm. veg. products, insoluble in water, mostly soluble in alcohol, ether, and volatile oils; freq. obtd. by exudation from trees; most common, colophony (*rosin*), residue from crude turpentine, used in polishes, soaps, varnishes, etc.; *copal*, also found as fossil, used for high grades of varnish; *dragons' blood*, from rattan palm, used as colouring agent; *amber*, a fossil resin; *guaiacum*, used in medicine for gout, rheumatism, and syphilis; *jalap* and *podophyllin*, medicinal resins (purgatives); *gum-lac* (which, when melted and allowed to set in thin sheets, is *shellac*), used for making spirit varnishes and French polish. **Synthetic r.**, organic chem. compound, product of condensation of *phenol* (*q.v.*) and its derivatives with formaldehyde, *e.g.*, bakelite. Used for insulators, electr. switches and switch-plates and other articles of daily use, which are formed hot in moulds under great pressure. **Resinates**, of the metals, resin soaps, used to make coloured transparent coatings on glass and leather.

Resistance, (phys.) forces tending to arrest movement, *e.g.*, inertia, friction, elect. R. of conductors. In electr., R. of a current depends on substance, diam., and length of conductor; measured in ohms (Ω); a tension of 1 volt acting thr. a R. of 1 ohm creates a current of 1 ampère. (See OHM'S LAW). **Electric r.**, varies directly as length and inversely as cross-section; each material has specific R. = R. of 1 cm. cube. Technical R. made of nichrom, platinoid, manganin, constantan, and other alloys, also of carbon and carbonised materials.

Res judicata (Lat.), case or point upon which a legal decision has already been arrived at.

Resolution, 1) decision of court or vote of assembly present at meetg. 2) (Chem.) Act of separatg. compound into its elements or parts.

Resonance, (phys.) occurs when any system possessing a tendency to oscillate at a certain frequency (*e.g.*, pendulum, boat floating on water, string of piano, elec. wave circuit) receives impulses of same or near frequency; *e.g.*, car on springs, boat in water, oscillate violently if subjected to timed pushes or waves in road or on water. R. dangerous in machines, suspension bridges; fundamental in all mus. instr., troublesome in concert halls; basis of all wireless reception (tuning of receiver so as to resonate to waves).

Resorcin, **resorcinol**, *m*-dihydroxy-

benzene ($C_6H_4(OH)_2$), white crystals used medic. in lotions or ointments for eczema and dandruff; basis of many azo-compounds (*q.v.*).

Respighi, Ottorino (1879-), Ital. composer: opera, *Belfagor*, 1923; symphonic poems, *Arctura*, 1911; *Pini di Roma*, 1924.

Respiration, 1) the process of exchange of gases betw. living organisms and the medium in which they live. In fishes, R. takes place thr. gills, in man and lower animals thr. lungs. 2) Process of breathing with the lungs; in man, the lungs expand with each breath, and air is drawn in, so that it comes in close contact with the blood capillaries. Oxygen is absorbed by the blood and carbon dioxide is given off. Expansion of lungs is due to the action of muscles, esp. diaphragm. **Artificial r.**, restoration by artificial means of function of breathing; performed in cases of asphyxia, due to drowning, gas-poisoning, etc. Sylvester's method most commonly used: arms are raised above the head and then flexed and pressed agst. the sides and lower part of chest; these movements are repeated 15-20 times a minute.

Respirator, apparatus through which remedies in the form of vapour are inhaled; also protective device agst. inhaling noxious gases or dust in factories, etc. **Respiratory exercises**, strictly regulated exercises in breathing, for purpose of strengthening lungs, heart, blood-vessels, chest, and abdominal muscles, and of promoting digestion and metabolism.

Response, (eccles.) part of liturgy said or sung by choir and congregation in reply to priest. **Responsory**, anthem sung by choir after lesson.
